# **STANDARD FEATURES**

Variable Speed Motors	Variable speed compressor and condensing fans for quiet operation and improved energy efficiency.
Semi-Closed Fluid System	Sealed fluid system with breathable reservoir cap (similar to an automobile). This prevents evaporative loses, introduction of bacteria, and the need for components to prevent fluid from draining back into the system when installed below the application.
<b>Optical Fluid Level Switch</b>	Fluid level sensing with no moving parts.
<b>RS-232</b> Communications	Complete control integration of chiller into higher level assembly control system.
Supply Pressure Sensing	Pressure sensing for applications sensitive to high operating conditions.

# **ACCESSORY KITS**

Feature	Kit Part Number	Description
Flow Control Valve and Flow Sensing Kit	387004277	Externally installed valve for reducing the overall flow to the application. Full flow continues through the chiller to maintain high heat transfer rates and temperature stability. Flow meter for measuring coolant flow rate. Installed external to the chiller with both a local display and connectivity to chiller LCD display.
Water Filter Kit	387004279	Hot swappable, 5-micron water filter for filtering particulates from the coolant circuit.
