

### 00AY240-C

### IBM® Compatible 10/100/1000Base-T SFP Copper **Transceiver**

Hot Pluggable, 1.25Gb/s, Cat-5 UTP Cable, 100m

#### **FEATURES**

- Up to 1.25Gb/s bi-directional data links
- 10/100/1000BASE-T auto negotiation
- Hot-pluggable SFP footprint
- Fully metallic enclosure for low EMI
- Low power dissipation
- Compact RJ-45 connector assembly
- Detailed product information in EEPROM
- +3.3V single power supply
- Access to physical layer IC via 2-wire serial bus
- 10/100/1000 BASE-T operation in host systems with SGMII interface
- Compliant with SFP MSA
- Compliant with IEEE Std 802.3TM-2002
- Compliant with FCC 47 CFR Part 15, Class B
- **RoHS Compliant Products**

#### **APPLICATIONS**

- 1.25 Gigabit Ethernet over Cat 5 cable
- Switch/Router to Switch/Router Link
- High speed I/O for file severs

#### **DESCRIPTION**

ATGBICS® Compatible 00AY240-C 10/100/1000BASE-T copper SFP transceiver is high-performance, costeffective module compliant with the Gigabit Ethernet and 10/100/1000BASE-T standards as specified in IEEE 802. 3-2002 and IEEE 802.3ab, which supporting 10/100/1000Mbps data- rate up to 100 meters reach over unshielded twisted-pair category 5 cable. The 00AY240-C supports 10/100/1000 Mbps full duplex datalinks with 5-level Pulse Amplitude Modulation (PAM) signals. All four pairs in the cable are used with symbol rate at 250Mbps on each pair. The 00AY240-C provides standard serial ID information compliant with SFP MSA, which can be accessed with address of A0h via the 2-wire serial CMOS EEPROM protocol. The physical IC can also be accessed via 2-wire serial bus at address ACh.

#### **SFP to Host Connector Pin Out**

| Pin | Signal name | Description                                       | MSA Notes |
|-----|-------------|---|-----------|
| 1   | VEET        | Transmitter ground (common with receiver ground)  |           |
| 2   | TFAULT      | Transmitter Fault. Not supported                  | Note 1    |
| 3   | TDIS        | Transmitter Disable. PHY disabled on high or open | Note 2    |
| 4   | MOD_DEF(2)  | Module Definition 2. Data line for Serial ID.     | Note 3    |
| 5   | MOD_DEF(1)  | Module Definition 1. Clock line for Serial ID.    | Note 3    |
| 6   | MOD_DEF(0)  | Module Definition 0. Grounded within the module.  | Note 3    |
| 7   | Rate Select | No connection required                            |           |
| 8   | LOS         | Loss of Signal - High Indicates Loss of Signal    | Note 4    |
| 9   | VEER        | Receiver Ground (common with transmitter ground)  |           |
| 10  | VEER        | Receiver Ground (common with transmitter ground)  |           |
| 11  | VEER        | Receiver Ground(common with transmitter ground)   |           |
| 12  | RD-         | Receiver Inverted DATA out. AC Coupled            | Note 5    |
| 13  | RD+         | Receiver Non-inverted DATA out. AC Coupled        | Note 5    |
| 14  | VEER        | Receiver Ground (common with transmitter ground)  |           |
| 15  | VCCR        | Receiver Power Supply                             | Note 6    |
| 16  | VCCT        | Transmitter Power Supply                          | Note 6    |
| 17  | VEET        | Transmitter Ground (Common with Receiver Ground)  |           |
| 18  | TD+         | Transmitter Non-Inverted DATA in. AC Coupled.     | Note 7    |
| 19  | TD-         | Transmitter Inverted DATA in. AC Coupled.         | Note 7    |
| 20  | VEET        | Transmitter Ground (common with receiver ground)  |           |

Table 1. SFP to host connector pin assignments and descriptions

#### Notes:

- 1. TX Fault is not used and is always tied to ground through a 100-ohm resistor.
- 2. TX Disable as described in the MSA is not applicable to the 1000BASE-T module, but is used for convenience as an input to reset the internal ASIC. This pin is pulled up within the module with a 4.7 KW resistor.
  - Low (0 0.8 V): Transceiver on
  - Between (0.8 V and 2.0 V): Undefined
  - High (2.0 3.465 V): Transceiver in reset state
  - Open: Transceiver in reset state
- 3. Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7-10 KW resistor on the host board to a supply less than VCCT + 0.3 V or VCCR + 0.3 V.
  - Mod Def 0 is tied to ground through a 100-ohm resistor to indicate that the module is present.
  - Mod-Def 1 is clock line of two wire serial interface for optional serial ID
  - Mod-Def 2 is data line of two wire serial interface for optional serial ID
- 4. LVTTL compatible with a maximum voltage of 2.5V. Not supported on HTSFP-24-111X

- 5. RD-/+: These are the differential receiver outputs. They are ac coupled 100-ohm differential lines which should be terminated with 100-ohm differential at the user SerDes. The ac coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 370 and 2000 mV differential (185 - 1000 mV single ended) when properly terminated. These levels are compatible with CML and LVPECL voltage swings.
- 6. VCCR and VCCT are the receiver and transmitter power supplies. They are defined as 3.3 V ± 5% at the SFP connector pin. The maximum supply current is about 300mA, and the associated in-rush current will typically be no more than 30 mA above steady state after 500 nanoseconds.
- 7. TD-/+: These are the differential transmitter inputs. They are ac coupled differential lines with 100 W differential termination inside the module. The ac coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 500 - 2400 mV (250 -1200 mV single ended), though it is recommended that values between 500 and 1200 mV differential (250 – 600 mV single ended) be used for best EMI performance. These levels are compatible with CML and LVPECL voltage swings.

Figure 1. Diagram of host board connector block pin numbers and names

#### +3.3V Volt Electrical Power Interface

The 00AY240-C has an input voltage range of 3.3 V +/- 5%. The 4 V maximum voltage is not allowed for continuous operation.

| Parameter         | Symbol | Min. | Typical | Max. | Units | Notes/Conditions  |
|-------------------|--------|------|---------|------|-------|---|
| Supply<br>Current | ls     |      | 320     | 375  | mA    | 1.2W max power over full range of voltage and temperature. See caution note below |
| Input<br>Voltage  | Vcc    | 3.13 | 3.3     | 3.47 | V     | Referenced to GND   |
| Surge<br>Current  | Isurge |      | 30      |      | mA    | Hot plug above steady state current. See caution note                             |

Caution: Power consumption and surge current are higher than the specified values in the SFP MSA

Table 2. +3.3 Volt electrical power interface

#### **Low-Speed Signals**

MOD\_DEF(1) (SCL) and MOD\_DEF(2) (SDA), are open drain CMOS signals. Both MOD\_ DEF(1) and MOD\_DEF(2) must be pulled up to host\_Vcc.

| Parameter          | Symbol | Min.              | Max.              | Units | Notes/Conditions                 |
|--------------------|--------|-------------------|-------------------|-------|----------------------------------|
| SFP Output<br>LOW  | VOL    | 0                 | 0.5               | V     | 4.7k to 10k pull-up to host_Vcc. |
| SFP Output<br>HIGH | VOH    | host_Vcc -<br>0.5 | host_Vcc +<br>0.3 | V     | 4.7k to 10k pull-up to host_Vcc. |
| SFP Input LOW      | VIL    | 0                 | 0.8               | V     | 4.7k to 10k pull-up to Vcc.      |
| SFP Input<br>HIGH  |        | 2                 | Vcc + 0.3 V       | V     | 4.7k to 10k pull-up to Vcc.      |

#### **High-Speed Electrical Interface**

Table 5. High-speed electrical interface, host-SFP

#### **General Specifications**

| Parameter    | Symbol | Min. | Typical | Max.  | Units | Notes/Conditions           |
|--------------|--------|------|---------|-------|-------|----------------------------|
| Data Rate    | BR     | 10   |         | 1,000 | Mb/s  | IEEE 802.3 compatible.     |
| Cable Length | L      |      |         | 100   | m     | Category 5 UTP. BER <10-12 |

**Table 6. General specifications** 

#### Notes:

- 1. Clock tolerance is +/- 50 ppm
- 2. By default, the 00AY240-C is a full duplex device in preferred master mode
- 3. Automatic crossover detection is enabled. External crossover cable is not required
- 4. 10/100/1000 BASE-T operation requires the host system to have an SGMII interface with no clocks, with a SERDES that does not support SGMII, the module will operate at 1000BASE-T only.

#### **Environmental Specifications**

The 00AY240-C has a commercial operating range from 0°C to +70°C case temperature as specified below.

| Parameter                | Symbol | Min. | Typical | Max. | Units | Notes/Conditions    |
|--------------------------|--------|------|---------|------|-------|---------------------|
| Operating<br>Temperature | Тор    | 0    |         | 70   | °C    | Case temperature    |
| Storage<br>Temperature   | Tsto   | -40  |         | 100  | °C    | Ambient temperature |

#### **Serial ID Memory Contents:**

| Data         | Length       | Name of        | Description and Contents                                    |
|--------------|--------------|----------------|---|
