

**PECL-TO-CML TRANSLATOR
WITH OUTPUT ENABLE****SY100ELT982**

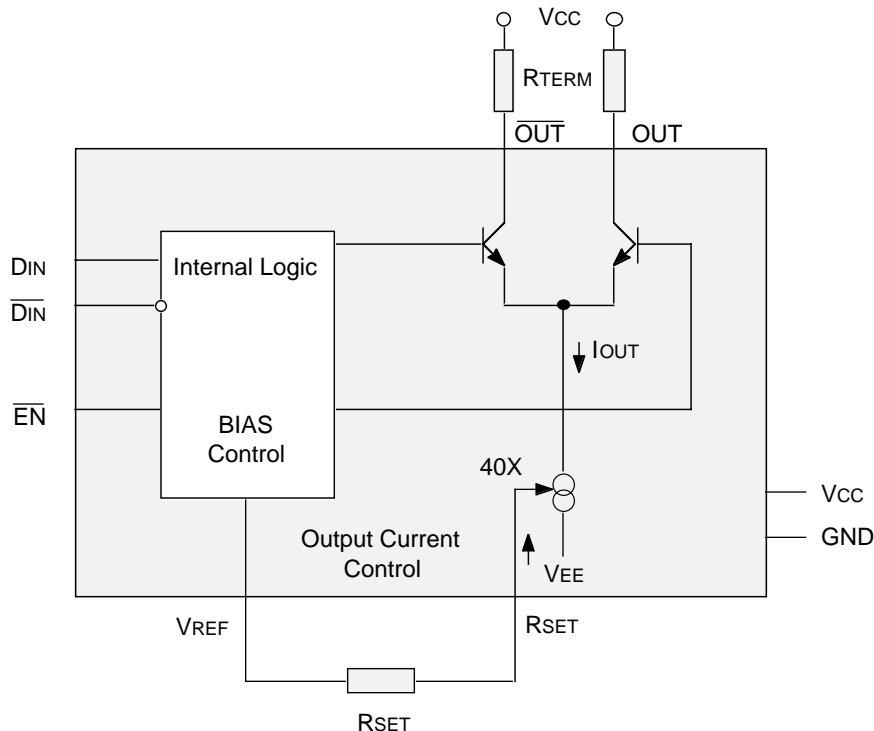

- Up to 1.25Gbps operation
- 25mA peak drive current
- Adjustable output current
- Separate output enable
- Differential inputs for data
- 75KΩ input pull-down resistor
- Single power supply
- Available in a tiny 10-pin MSOP

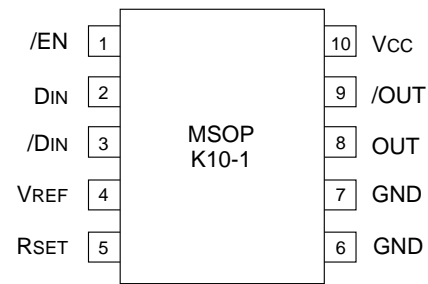

The SY100ELT982 is a high speed PECL-to-CML translator. The output current is DC current controlled by I_{RSET} , current through the resistor R_{SET} . The output \overline{OUT} is LOW when output enable is HIGH.

The device incorporates complementary open collector outputs with a capability of driving peak current of 25mA.

The SY100ELT982 utilizes the high performance bipolar ASSET™ technology.

- Telecommunications
- CML output oscillator
- GaAS interface
