Notes:

1. R_{aUA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta LC}$ is guaranteed by design while $R_{\theta CA}$ is determined by the user's board design.

- 2. Pulse Test: Pulse Width < $300\mu s$, Duty Cycle < 2.0%
- The diode connected between the gate and source serves only as protection againts ESD. No gate overvoltage rating is implied.
