Warning

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

1) We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.

2) We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.

3) We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.

4) When the product is in CFL models, CFL service life and brightness will vary according to the performance of the inverter used, leaks, etc. We cannot accept responsibility for product performance, reliability, or defect, which may arise.

5) We cannot accept responsibility for intellectual property of a third party, which may arise through the application of our product to your assembly with exception to those issues relating directly to the structure or method of manufacturing of our product.

6) We will not be held responsible for any quality guarantee issue for defect products judged As KYOCERA-origin in 2 (two) years from our production or 1(one) year from KYOCERA Group delivery whichever is shorter.
However, priority is given to the contents of the "part (product) basic contract document" concluded in both.

1. Application

This specification applies to TFT-LCD module 「with Touch Panel」

(T-55343GD035JU-LW-AJN)

2. General Specifications

Screen Size   :   3.5 inches (8.9cm) Diagonal

Active Area   :   70.08(W) x 52.56(H) mm

Display Format   :   320(W) x 3[R.G.B] x 240(H)

Pixel Size   :   0.073 x 3[R.G.B](W) x 0.219(H) mm

Pixel Arrangement   :   RGB-Stripe

Color Depth   :   16M colors

Display Mode   :   Normally White

Viewing Direction   :   12 O'clock (1 Angle of Least Color Inversion)

Surface Treatment   :   AG Coating

Interface   :   24-bit Digital RGB interface(8-bit / color)

Outline Dimension   :   79.0(W) x 65.0(H) x 4.8Max*(D) mm
         *Without FPC and Component Area

Weight   :   46.5gmax

Backlight   :   LED Backlight / White

RoHS regulation   :   To our best knowledge, this product satisfies material requirement
of RoHS regulation.
Our company is doing the best efforts to obtain the equivalent
certificate from our suppliers.

3. Operating Conditions

Item	Conditions	Temperature range	Remark
Operating temperature range	Panel surface	−20～70°C	Note1
Storage temperature range	Panel surface	−30～80°C	

Note1: Operating temperature range defines the operation only and the contrast, response time

and other display optical characteristics are set at Ta=+25°C.

　　・Change signal voltage to measure maximum brightness Y1 and minimum brightnessY2.

　　・Contrast is derived from CR=Y1/Y2.

◆ Definition of Brightness Uniformity (Fig.2)

　　Definition is calculated from the 5 points (S0-S4) on the diagram below.

$$\text{Standard value of Brightness Uniformity[\%]} = \frac{\text{S0}\sim\text{S4 MIN}}{\text{S0}\sim\text{S4 MAX}} \times 100$$

（3） Angle of Measuring

θ：An angle vertical to perpendicular line from the viewing direction.

φ：An angle horizontal to perpendicular from the viewing direction.

（4） Method of Measuring

Set the module on the rotation table and measure a vertical axis direction in the state
that fixed φ=0 degrees horizontal axis direction to θ=90degrees.
(Viewing angle is measured automatically by EZ CONTRAST).

(3) Method of Measuring

・ Set LCD panel to θ=0°, and φ=0°.

・ Input white→black→white to display by switching signal voltage.

・ If the luminance is 0% and 100% immediately before the change of signal voltage, then τr is optical response time during the change from 90% to 10% immediately after rise of signal voltage, and τd is optical response time during the change from 10%to 90% immediately after decay of signal voltage.

11. Applying Precautions

Please contact us when questions and/or new problems not specified in this
Specifications arise.

12. Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

1) Liquid crystal display devices
   1. The liquid crystal display panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
   2. The polarizer adhering to the surface of the LCD is made of a soft material.
      Guard against scratching it.

2) Care of the liquid crystal display module against static electricity discharge.
   1. When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect worktables against the hazards of electrical shock.
   2. Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
   3. Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.

3) When the LCD module must be stored for long periods of time:
   1. Protect the modules from high temperature and humidity.
      Conditions: Temperature   : 0°C~40°C
                      Humidity   : Less than 60%RH
                      No dew condensation to be observed.
   2. Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
   3. Protect the modules from excessive external forces.
   4. After a long period storage of the product (or LCD) under the low temperature and the dark, it might take a longer time to turn on the CCFL than normal.

4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.

5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.

6) Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.

7) For models which use CFL:
   1. High voltage of 1000V or greater is applied to the CFL cable connector area. Care should be taken not to touch connection areas to avoid burns.
   2. Protect CFL cables from rubbing against the unit and thus causing the wire jacket to become worn.
   3. The use of CFLs for extended periods of time at low temperatures will significantly shorten their service life.
   4. After storing the product (or LCD) under low temperature and/or in dark atmosphere for a long period of time, CCFL may take longer time to reach its specified brightness.

8) For models which use touch panels:
   1. Do not stack up modules since they can be damaged by components on neighboring modules.
   2. Do not place heavy objects on top of the product. This could cause glass breakage.

9) For models which use COG,TAB,or COF:
  1.The mechanical strength of the product is low since the IC chip faces out unprotected from the rear. Be sure to protect the rear of the IC chip from external forces.
  2.Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.

10) Models which use flexible cable, heat seal, or TAB:
  1.In order to maintain reliability, do not touch or hold by the connector area.
  2.Avoid any bending, pulling, or other excessive force, which can result in broken connections.

11)   In case of buffer material such as cushion / gasket is assembled into LCD module, it may have an adverse effect on connecting parts (LCD panel-TCP / HEAT SEAL / FPC / etc., PCB-TCP / HEAT SEAL / FPC etc., TCP-HEAT SEAL, TCP-FPC, HEAT SEAL-FPC, etc.,) depending on its materials. Please check and evaluate these materials carefully before use.
12)   In case of acrylic plate is attached to front side of LCD panel, cloudiness (very small cracks) can occur on acrylic plate, being influenced by some components generated from polarizer film.
Please check and evaluate those acrylic materials carefully before use.

13)   Flickering due to optical interference may occur by combination of a) LCD driving frame frequency decided by either internal oscillator in driver IC or external clock input by the customer and b) lighting frequency of either backlight or other light sources. Please evaluate enough at the environment of actual use, and decide the driving condition that does not cause flickering.
