

# PE4140

## Ultra-High Linearity UltraCMOS™ Broadband Quad MOSFET Array

### Features

- Ultimate Quad MOSFET array
- Ultra-high linearity, broadband performance beyond 6.0 GHz
- Ideal for mixer applications
- Up/down conversion
- Low conversion loss
- High LO Isolation
- Packaged in small 6-lead 3x3 mm DFN

### Product Description

The PE4140 is an ultra-high linearity passive broadband Quad MOSFET array with high dynamic range performance capable of operation beyond 6.0 GHz. This quad array operates with differential signals at all ports (RF, LO, IF), allowing mixers to be built that use LO powers from -7 dBm to +20 dBm. Typical applications range from frequency up/down-conversion to phase detection for Cellular/PCS Base Stations, Wireless Broadband Communications and STB/Cable modems.

The PE4140 is manufactured on pSemi's UltraCMOS™ process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

**Table 3. Absolute Maximum Ratings**

Symbol	Parameters/ Conditions	Min	Max	Units
$T_{ST}$	Storage temperature range	-65	150	°C
$T_{OP}$	Operating temperature range	-40	85	°C
$V_{DC+AC}$	Maximum DC plus peak AC voltage across Drain-Source		±3.3	V
$V_{DC+AC}$	Maximum DC plus peak AC voltage across Gate-Drain or Gate-Source		±4.2	V
$V_{ESD}$	HBM <sup>1</sup> ESD Voltage		100	V

Note 1: ML\_STD 883 Method 3015.7

Exceeding absolute maximum ratings may cause permanent damage. Operation should be restricted to the limits in the Operating Ranges table. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

### Electrostatic Discharge (ESD) Precautions

This MOSFET device has minimally protected inputs and is highly susceptible to ESD damage. When handling this UltraCMOS™ device, observe the same precautions that you would use with other ESD-sensitive devices.

### Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS™ devices are immune to latch-up.

### Device Description

The PE4140 passive broadband Quad MOSFET array is designed for use in up-conversion and down-conversion applications for high performance systems such as cellular infrastructure equipment and STB/CATV systems.

The PE4140 is an ideal mixer core for a wide range of mixer products, including module level solutions that incorporate baluns or other single-ended matching structures enabling three-port operation.

The performance level of this passive mixer is made possible by the very high linearity afforded by pSemi's UltraCMOS™ process.

### Marking

Packaged devices are marked with part number "4140", date code and lot code.

### Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the PE4140 in the 6-lead 3x3 DFN package is MSL1.
