

Introducing Generation II PARALIGHT QSFP+ Active Optical Cable Assemblies for High Speed Interconnects

Our TE Connectivity PARALIGHT QSFP+ active optical cable assemblies use state-of-the-art technology to provide cost effective high data throughput interconnects. The cables incorporate E/O and O/E conversion built into the connector shell to yield a dramatic improvement in PCB real estate utilization.

Using 850 nm VCSEL technology, the 10 Gb/s active cable assemblies will operate over a data rate of 2.5 to 10 Gb/s per lane with an aggregate data rate of 40 Gb/s.

They are available in lengths up to 100 meters using 50 micron fiber. Longer lengths available upon request. The EOE circuitry is designed for use with 8B/10B encoded data streams, such as InfiniBand, Fibre Channel, and XAUI.

QSFP connector style supports connections for an I2C serial interface, which can be used to identify the product and performance capabilities.

KEY FEATURES

- Generation II PARALIGHT QSFP+ Active Optical Cable Assemblies feature fully integrated optical engines that use less power, are lower in cost and offer higher performance.
- 4 transmit and 4 receive channels at 10 Gb/s channel.
- Industry standard QSFP Connectors.
- Internally terminated optics — no optical connector to clean.
- Differential data I/O per InfiniBand version 1.2.1.
- Passively cooled design — low thermal resistance heat path from chip to connector shell.
- Small diameter cable (3.0mm).
- Light weight.
- Tight bend radius.

APPLICATIONS
