## Device Connectivity

## Transforming customer wishes into concrete solutions

The HARTING Technology Group is skilled in the fields of electrical, electronic and optical connection, transmission and networking technology, as well as in manufacturing, mechatronics and software creation. The Group uses these skills to develop customized solutions and products such as connectors for energy and data-transmission/data-networking applications, including, for example, mechanical engineering, rail technology, wind energy plants, factory automation and the telecommunications sector. In addition, HARTING also produces electro-magnetic components for the automobile industry and offers solutions in the field of using technology and shop systems.

The HARTING Group currently comprises 53 sales companies and production plants worldwide employing a total of about 4,200 staff.

HARTING Subsidiary

HARTING Representation

### We aspire to top performance.

Connectors ensure functionality. As core elements of electrical and optical termination, connection and infrastructure technologies, they are essential in enabling the modular construction of devices, machines and systems across an extremely wide range of industrial applications. Their reliability is a crucial factor guaranteeing smooth functioning in the manufacturing area, telecommunications, applications in medical technology – in short, connectors are at work in virtually every conceivable application area. Thanks to the ongoing development of our technologies, our customers enjoy investment security and benefit from durable, long-term functionality.

### Wherever our customers are, we're there.

Increasing industrialization is creating growing markets that are characterized by widely diverging demands and requirements. What these markets all share in common is the quest for perfection, increasingly efficient processes and reliable technologies. HARTING is providing these technologies – in Europe, the Americas and Asia. In order to implement customer requirements in the best possible manner, the HARTING professionals at our international subsidiaries engage in up-close, partnership-based interaction with our customers, right from the very early product development phase.

Our on-site staff form the interface to the centrally coordinated development and production departments. In this way, our customers can rely on consistently high, superior product quality – worldwide.

### Our claim: Pushing Performance.

HARTING provides more than optimally attuned components. In order to offer our customers the best possible solutions, on request HARTING contributes a great deal more and is tightly integrated into the value-creation process. From ready-assembled cables through to control racks or ready-to-go control desks. Our aim is to generate maximum benefit for our customers – with no compromises!

### Quality creates reliability – and warrants trust.

The HARTING brand stands for superior quality and reliability – worldwide. The standards we set are the result of consistent, stringent quality management that is subject to regular certifications and audits.

EN ISO 9001, the EU Eco-Audit and ISO 14001 are key elements here. We take a proactive stance towards new requirements, which is why HARTING is the first company worldwide to have obtained the IRIS quality certificate for rail vehicles.

### **HARTING technology creates added value for customers.**

Technologies by **HARTING** are at work worldwide. **HARTING**'s presence stands for smoothly functioning systems powered by intelligent connectors, smart infrastructure solutions and sophisticated network systems. Over the course of many years of close, trust-based cooperation with its customers, the **HARTING** Technology Group has become one of the leading specialists globally for connector technology. We offer individual customers specific and innovative solutions that go beyond the basic standard functionalities. These tailored solutions deliver sustained results, ensure investment security and enable customers to achieve significant added value.

### **Opting for HARTING opens up an innovative, complex world of concepts and ideas.**

In order to develop and produce connectivity and network solutions serving an exceptionally wide range of connector applications in a professional and cost-effective manner, **HARTING** not only commands the full array of conventional tools and basic technologies. Above and beyond these capabilities, **HARTING** is constantly harnessing and refining its broad base of knowledge and experience to create new solutions that also ensure continuity. To secure its lead in know-how, **HARTING** draws on a wealth of sources from its in-house research and applications.

Salient examples of these sources of innovative knowledge include microstructure technologies, 3D design and connection technol-

ogy, high-temperature and ultrahigh-frequency applications that are finding use in telecommunications and automation networks, in the automotive industry, or in industrial sensor and actuator applications, RFID and wireless technologies, in addition to packaging and housing made of plastics, aluminum and stainless steel.

### **HARTING overcomes technological limitations.**

Drawing on the comprehensive resources of the group's technology pool, **HARTING** devises practical solutions for its customers. Whether this involves industrial networks for manufacturing automation, or hybrid interface solutions for wireless telecommunication infrastructures, 3D circuit carriers with microstructures, or cable assemblies for high-temperature applications in the automotive industry – **HARTING** technologies offer not only components, but comprehensive solutions attuned to individual customer requirements and preferences. The range of cost-effective solutions covers ready-to-use cable configurations, completely assembled backplanes and board system carriers, as well as fully wired and tested control panels.

In order to ensure the future-proof design of RF and EMC-compatible interface solutions, the central **HARTING** laboratory (accredited according to DIN EN ISO/IEC 17 025) employs simulation tools, as well as experimental, testing and diagnostics facilities all the way to Industrial computed tomography. In addition to product and process suitability considerations, lifecycle and environmental aspects play a key role in the selection of materials and processes.

## HARTING's knowledge is practical know-how that generates synergy effects.

HARTING commands decades of experience with regard to the applications conditions involved in connections in telecommunications, computer, network and medical technologies, as well as industrial automation technologies, e.g. in the mechanical engineering and plant engineering areas, in addition to the power generation industry and the transportation sector. HARTING is highly

conversant with the specific application areas in all of these technology fields. In every solution approach, the key focus is on the application. In this context, uncompromising, superior quality is our hallmark. Every new solution found invariably flows back into the HARTING technology pool, thereby enriching our resources. And every new solution we go on to create will draw on this wealth of resources in order to optimize each and every individual solution. HARTING is synergy in action.

## Smart Network Infrastructure

### INTELLIGENT NETWORK SOLUTIONS

With its product series Ha-VIS, HARTING offers a consistent range of Ethernet network components and cabling products, which form the communication platform of convergent

automation IT networks. Under Ha-VIS HARTING offers fully integrated RFID solutions.

## Installation Technology

### INDUSTRIAL CONNECTORS Han®

This catalogue documents the worldwide standard for industrial connectors. Han® connectors represent the preferential solution in the cable-to-cable interconnection of data, signal and power

applications operating under the most demanding conditions and meeting stringent requirements with regard to safe and detachable electrical connections with high degree of protection IP65 / IP67. Installations making use of Han® connectors impress with their rugged design, convenient handling and modularity of data, signal and power connections. Han® connectors represent the worldwide standard in industry, railway technology, as well as in power generation and distribution.

## Device Connectivity

### DEVICE CONNECTIVITY

The Device Connectivity catalogue provides a universal, innovative product portfolio of PCB connections and of termination technology. The product range comprises board-to-

board and cable-to-board connectors for industrial electronic devices with degree of protection IP20 to IP65 / IP67. These HARTING solutions offer appropriate device connectivity for a wide range of devices, ranging from sensors to industrial computers and their respective data, signal and power interfaces.

**CABLE- / WIRE-TO-BOARD**

Whatever your applications may be, HARTING has the ideal solutions for your data, signal and power connectivity requirements with its matching cable-to-board and wire-to-board technologies with degree of protection IP20 to IP65 / IP67.

# FIELD CABINET

#### BOARD-TO-BOARD

Regardless of your device configuration, HARTING always has an ideal board-to-board connector with maximum packing density and optimal performance with regard to signal transmission and integrity.

# DEVICE

## 01. HARTING RJ INDUSTRIAL® – RJ45 ETHERNET CONNECTORS

HARTING offers a wide range of RJ45 contact inserts and matching RJ45 connectors for quick and reliable termination of your 2- or 4-pair Ethernet cables. The RJ Industrial connector family also supports Ethernet automation profiles such as PROFINET, Ethernet/IP, EtherCAT and Powerlink. The HARTING RJ Industrial® connectors provide standard RJ45 connection technology for the industrial field level.

## 02. PushPull CONNECTORS

HARTING has set the standard for connection technology for innovative IP65 / IP67 installation concepts with its new generation of the PushPull series. The multifunctional PushPull connector is available for data, signal and power applications and provides a concept with many connector mating faces. The universal PushPull product line is complemented by additional interfaces such as USB, LC or SCRJ.

## 03. CIRCULAR CONNECTORS

HARTING offers a comprehensive portfolio of M8, M12, M23, 7/8" and Han-Max® circular connectors for industrial applications. In addition to assembled system cables, HARTING also offers connectors with HARAX® fast termination technology for onsite installation directly in the field.

## 04. INDUSTRIAL CONNECTORS Han®

Han® industrial connectors with degree of protection IP65 / IP67 represent the worldwide connector standard with regard to safe installation, efficient commissioning and servicing of machines and plants

Power

Signal

Data

## 05. Subminiature D Connectors

D-Sub connectors are a classic solution for cable-to-board applications. Thanks to their versatility, they represent a universal solution for applications in the field of device connectivity, and offer a wide range of data, signal and power connection technology for applications in automation systems.

## 07. har-link® INTERFACE CONNECTORS

The har-link® connector is characterized by its ability to handle the highest data rates in combination with perfect shielding functions. HARTING complements the har-link® connector family by assembled system cables with shielded and unshielded twisted-pair design.

## 08. SEK INSULATION DISPLACEMENT CONNECTORS

IDC connectors for flat ribbon cables facilitate the simple and cost-effective configuration of devices and are preferably implemented as internal connections. HARTING offers a wide range of these cable-to-board connectors.

### 09. DIN 41 612 CONNECTORS

For many years, connectors to DIN 41 612 have established themselves as a standard both for board-to-board and cable-to-board applications. HARTING offers a wide product range of DIN 41 612 connectors for data, signal and power lines, including corresponding accessories.

### 10. Mini Coax CONNECTORS

Mini Coax connectors facilitate multi-channel, coaxial and highfrequency data transmission for board-to-board and cable-to-board applications. Device integration is supported with straight and angled contact inserts with press-in technology and SMT/SMC. The housings support applications up to IP65.

### 11. har-bus® HM CONNECTORS

har-bus® HM connectors form the basis for the assembly of high-performance backplanes for control systems and for industrial computer systems with 19" technology. The board-to-board connectors are available with press-in technology for backplanes and solder versions for sub-boards.

### 12. TCA CONNECTORS

TCA connectors represent the next generation of backplane connectors. Their new concept supports direct or indirect connection. TCA connector versions are available for connecting data channels and the power supply to the modules.

### 13. MICRO CARD EDGE CONNECTORS

The HARTING Micro Card Edge connector for applications requiring board-to-board mezzanine or small pluggable daughter card connections. The key feature is the very flexible stacking height of parallel boards by utilizing a small board between the connectors.

### 14. har-flex® CONNECTORS

HARTING's new har-flex® connector series is a space-saving, rugged and flexible PCB connector for the widest range of board-to-board and board-to-cable applications. In addition to straight connector models, the product family also includes compatible insulation displacement connectors, along with angled models.

### 15. har-flexicon® PCB TERMINAL BLOCKS AND CONNECTORS

har-flexicon® is the robust PCB termination technology for single wires. Components for the termination of industrial devices in the pitches of 1.27 mm, 2.54 mm, 3.50/3.81 mm and 5.00/5.08 mm are available. All components are particularly suited for reflow-soldering on the PCB and offer field assembly with PushIn and insulation displacement termination for single wires.

# We ensure convincing connectivity for each and every device you bring to the markets.

HARTING will develop the ideal connectivity for your devices in cooperation with your product management and device developers. For us, this means: Design-in support.

## HARTING, THE SPECIALIST FOR INDUSTRIAL DEVICE CONNECTIVITY

The versatility of industrial electronic devices and the potential solutions for device connectivity go hand in hand.

HARTING supports industrial electronic systems with a wide standard portfolio of device connectivity for data, signal and power applications.

This portfolio facilitates the comfortable and quick implementation of the majority of connectivity solutions. Future device generations are frequently subject to specific requirements in terms of their interfaces. In order to implement Device Connectivity solutions that are tailored to these requirements, we utilize all expert resources of the HARTING Technology Group, drawing on our in-house development, tool production, extensive vertical range of manufacture and our accredited test laboratories. The connectivity of future industrial device generations is driven by market trends towards minimization of sizes, increase of performance and utilization of Ethernet communication with rapidly rising transmission rates. Consequently, as one of the leaders on the telecommunication connectivity market, HARTING integrates the knowledge acquired in this market segment to develop new Device Connectivity for industrial devices.

The MicroTCA telecommunications connector, for example, is implemented as a board-to-board connector for the latest devices in the field of drive control and computer technology. The new generation of PushPull connectors is also used as a robust IP67 cable-to-board solution in both market application segments. These applications have formed a general trend of convergence in the field of device connection technology. HARTING offers more than innovative device connectors, as the connectivity provided by HARTING extends far beyond conventional connector offerings, and covers the entire range of connectors, assembled units and complete backplane solutions.

## HARTING IS YOUR PARTNER IN THE DESIGN-IN PROCESS

Our field service department is your first contact partner in terms of the selection and design of the ideal connectivity solution for your device. This service is supported by HARTING's technical application support with device-specific knowledge.

HARTING also places a team of experts in the fields of RF, EMC, housing technology, mechanical strength, high-current applications and installation concepts (cabling classes) at your disposal. These capabilities allow us to simulate your applications in advance and test it in the course of development in an accredited laboratory.

The HARTING Technology Group holds all the key technologies for integrated device connectivity, such as connection technology for PCBs based on SMD, THT, THR or press-fit technology and develops connectivity solutions for international standardization in cooperation with user groups.

The latest generation of PushPull connectors was developed in cooperation with the German automotive industry and subsequently standardized on an international level.

You determine which part of the design-In process should be handled by HARTING.

There are three ways of finding the ideal device connectivity with HARTING:

1. You select the suitable device connection technology from the DeviceCon catalog and handle the design-in by yourself with the help of our technical applications support.
2. You define the scope of requirements for the device interfaces. HARTING supports you in selecting the device connection technology, with the focus always set on choosing the ideal connection technology for device integration. HARTING also holds the respective know-how for handling the entire design and the production of custom assembled units or backplanes.
3. You plan a new device generation with individualized device connectivity, which is defined in the course of a joint project. The result is a tailored, cost-effective solution for your series product and the differentiation of such products thanks to innovative device connectivity.

Whichever procedure you may prefer, you can always count on unrestricted HARTING support, as we are dedicated to ensuring convincing connectivity for each and every device you bring to the markets.

The HARTING eCatalogue / eShop can be found on our homepage at [www.HARTING.com](http://www.HARTING.com) or at the direct link [www.eCatalogue.HARTING.com](http://www.eCatalogue.HARTING.com).

The HARTING e-Catalogue is your platform for conveniently selecting individual products as well as configuring complete solutions. Our comprehensive product pages provide you with all necessary technical information and CAD files in various formats for downloading. You may also contact our technical sales department directly.

Find out about **product innovations and news** on the start page of the HARTING e-Catalogue or go directly to [www.product-news.HARTING.com](http://www.product-news.HARTING.com).

Registered users can take advantage of MyHARTING to check on availability or prices, and to place or track their orders. Here, your customized „HARTING history“ provides you with a list of your inquiries, quotations and more.

Sign up now for your free e-Catalogue account at HARTING!

## Product samples: Fast-track delivery to your desk, free of charge

The new free express sample service in the HARTING eCatalogue allows customers to order samples immediately, easily and completely free of charge. A broad selection from the device connectivity product portfolio is now available. If a product is unavailable, the system offers alternative products with similar features that can be requested at a mouse click.

The free samples are shipped within 24 hours at no cost to you. This service enables tremendous flexibility, especially in the design phase of projects.

### General information

It is the customer's responsibility to check whether the components illustrated in this catalogue also comply with different regulations from those stated in special fields of applications.

We reserve the right to modify designs or substance of content in order to improve quality, keep pace with technological advancement or meet particular requirements in production.

No part of this catalogue may be reproduced in any form (print, photocopy, microfilm or any other process) or processed, duplicated or distributed by means of electronic systems without the prior written consent of HARTING Electronics GmbH, Espelkamp. We are bound by the German version only.

## 1. Han-Quick Lock® SPRING CLAMP TECHNOLOGY

The Quick Lock® radial spring clamp technology combines the benefits of a spring-loaded contact with crimp technology. The result is a simple and vibration-proof wiring technology with the crimp technology contact grid. Quick Lock® technology is suited for wiring flexible conductors. The stranded wires are split up by means of a center mandrel and are then pressed onto this mandrel by means of radial spring force. The spring is opened and activated using a standard screwdriver, which ensures convenient on-site termination, repair or service work.

## 2. AXIAL SCREW TERMINALS

Flexible stranded wires inserted into axial screw terminals are split up by a center mandrel and are then pressed onto the outer wall of the contact by screwing down the mandrel. This vibration-proof connection technology is also a convenient solution for repair work and is capable of handling conductor cross-sections to 100 mm<sup>2</sup>. The axial screw terminal is an ideal alternative to applications that required special crimp tools for wiring large conductor cross-sections.

## 3. CAGE CLAMP TERMINALS

The cage clamp terminal technology is used to terminate flexible and solid conductors by means of spring force. After the spring has been opened by an actuator element, the stripped conductor is simply inserted into the contact chamber. This connection technology requires minimum operating expense and is characterized by its high functional safety. The spring-loaded connection also allows the termination of more than one wire per contact and excels with high vibration and shock resistance.

## 4. PUSH-IN SPRING CONNECTION

Push-in spring connector technology connects flexible and solid conductors by means of a spring. In a time-saving manner rigid conductors and flexible prefabricated conductors with wire-end ferrules can be connected directly, without the need for tools. Push-in spring connector technology ensures low insertion force and high conductor withdrawal force, and multiple connections are possible. When it comes to flexible conductor connection, before plugging in the terminal point should be opened via the activation element or with a suitable screw-driver.

## 5. SCREW TERMINALS

The screw terminal represents classic connection technology, with screws retaining the stripped conductors in the contact chambers. Screw technology is suited for wiring solid and flexible conductors. Screw terminals with wire protection allows the insertion of stranded wire into the contact chamber without a ferrule. Handling screw terminal technology requires nothing more than a screwdriver. The pull out forces of screw terminal technology are standardized in IEC 60 999-1.

## 6. IDC INSULATION DISPLACEMENT TERMINALS

IDC (insulation displacement contact) technology facilitates the simple and safe termination of solid and flexible conductors. With IDC technology, a blade cuts through the wire insulation and produces an elastic termination in a single pass. This gas-proof connection provides maximum safety even for the lowest currents and voltages. *HARAX®* Fast termination technology is a special feature offered by HARTING which combines the insulation displacement connector with a wire guide element for conveniently producing on-site field installation without special tools. Technical requirements for IDC technology are standardized in IEC 60 352-3.

## 7. CRIMP TERMINALS

Gas-proof and the miniaturized contact technology are synonymous with crimp technology. The flexible conductor is inserted into the crimp contact and is retained by controlled deformation. This technology is similar to a cold welding process and provides maximum aging resistance and mechanical resistance to shock and vibration. Crimp machines facilitate the efficient, streamlined production of system cable assemblies, and crimp technology can also be deployed for field assemblies using the corresponding hand crimp tools. The technical requirements for crimp technology are standardized in IEC 60 352-2.

## 8. THT SOLDERING TECHNOLOGY

Proven over decades, standard soldering technologies deliver maximum stability and process reliability.

The soldering pins of the connectors are inserted into the through-plated PCB holes and can then be soldered simultaneously with other components in a wave soldering process.

## 9. SMC SOLDERING TECHNOLOGY

The connector is inserted into through-plated PCB holes similar to standard component assembly for processing with SMC (Surface Mount Compatible) soldering technology. Insertion of these SMT components can be automated by means of Pick & Place assembly in preparation for a reflow soldering process together with the surface-mounted component.

This connection technology is characterized by high mechanical strength and is facilitated by a design that is specially adapted to the reflow soldering process (high-temperature materials).

## 10. SMT SOLDERING TECHNOLOGY

By contrast to through-plated assembly, the SMT (Surface Mounted Technology) connectors are soldered directly onto the PCB surface by means of soldering pads. This process represents a uniform connection technology for PCB assembly and offers the advantage of SMT connectors that do not require separate wave soldering.

## 11. PRESS-IN TECHNOLOGY

This solder-free connection technology is based on press-in mounting of a pin in a through-plated PCB hole. The implementation of a state-of-the-art, flexible press-fit zone allows for the compensation of tolerances of PCB holes and meets high electrical and mechanical requirements for properties such as low press-in forces and high holding forces.

Press-in technology supports unlimited cost efficient processing, especially of pins with selective gold plating for backplane bus systems.

# 01. HARTING RJ Industrial® – RJ45 Ethernet Connectors

Ethernet is coming up to standard industrial interface. Therefore, automation devices, such as controllers, sensors and actuators feature possess one or several RJ45 interfaces. HARTING offers the matching sockets and the ideal connectors for quick and safe connection of the 2- or 4-pair Ethernet cable to the appliance. Users can rely either on ready-to-use patch cables in various lengths, or obtain RJ45 connectors for easy on-site dressing of the cables without using special tools.

HARTING relies on the *HARAX®* quick connection technology for on-site preparation of cables, meeting all industrial requirements made on safe and durable contacting.

The HARTING RJ Industrial® connector family also supports Ethernet automation profiles such as PROFINET, Ethernet/IP, POWERLINK and EtherCAT for the integration of RJ45 connection technology at field levels.

## Application profile:

# 01. HARTING RJ Industrial® – RJ45 Ethernet Connectors

The modular HARTING RJ Industrial® connector family is based on the standard RJ45 pin profile and was developed especially for use in rugged industrial environments.

This technology charts a new course in the wiring of appliances with Ethernet interfaces, enabling the on-site configuration of connectors for many industrial applications, no matter if the product is a power connector or a communications connector.

For the fast wiring of all Ethernet networks, HARTING relies consistently on the *HARAX*® IDC connection technology which has proved its worth in many industrial applications.

Solid or flexible conductors up to a cross-section of AWG 22 are terminated by IDC technology, without stripping or using any special tool.

For all Gigabit Ethernet networks HARTING offers the 8-pole data module with piercing connection technology and the new 8-pole data module with *HARAX*® quick termination technology.

All data modules have the same dimensions.

The replacement of the data module enables the conversion of any 100 MBit Fast Ethernet network into a Gigabit Ethernet network using HARTING RJ Industrial® connectors. This innovative platform strategy also permits the use of the RJ45 data module in combination with the PushPull, Han-Max® and Han® 3 A connector families.

Based on this data module, HARTING has developed a comprehensive connector family which covers all applications for Fast Ethernet, 1/10 Gigabit Ethernet, PROFINET, Ethernet/IP and other Ethernet profiles in the industrial environment.

Degree of protection IP20 is available for the standard RJ45 connectors, either for configuration in the field, or as molded system patch cable.

## APPLIANCE INTEGRATION:

HARTING offers various RJ45 jacks for direct mounting on the PCBs of appliances.

## RJ45 QUICK CONNECTION WITH HARAX®:

The HARTING HARAX® quick connection technology is the ideal solution for dressing RJ45 connectors on-site. In order to produce a gas-proof and vibration resistant Ethernet connection, users only have to strip the cable insulation, insert the conductors, terminate the shielding plates and close the connector.

HARAX® is the most convenient handling standard connection for Ethernet where the emphasis is set on the assembly of connectors in the field.

HARAX® is an ideal IDC connection technology which is deployed universally in a very wide range of data, signal and power series.

## ASSEMBLED SYSTEM CABLES:

HARTING offers a comprehensive range of ready-to-use RJ45 system cables for the simple and easy connection of Ethernet devices. HARTING also provides assembled and tested system cables for special Ethernet profiles such as PROFINET and Ethernet/IP.

The range of solution comprises star quad, double-pair and four-pair cables of diverse structure, as required in drag chain applications, for example.

Consequently, HARTING system cables can be deployed in all Ethernet applications and all ambient conditions.

## PERFORMANCE FOR THE FUTURE:

The HARTING RJ Industrial® portfolio offers a wide range of solutions for Industrial Ethernet, independent of wiring strategies to ISO/IEC 11 801 currently deployed to wire appliances.

HARTING RJ Industrial® provides field connection technology based on 2-pair category 5 variant and on 4-pair category 6 variant.

HARTING RJ Industrial® is ideal for the future-proof planning of appliance interfaces, regardless of whether your future applications will involve Fast or Gigabit Ethernet, or 10 Gigabit Ethernet.

HARTING RJ Industrial® RJ45 jacks for direct device integration

## Advantages

- Compact design
- Category of transmission Cat. 5
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)
- Temperature range -40 °C ... +70 °C

## Technical characteristics

Locking	RJ45 acc. to IEC 60603-7
Number of contacts	8
Degree of protection	IP20

HARTING RJ Industrial® RJ45 jacks for direct device integration

## Advantages

- Compact design
- Category of transmission Cat. 6
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)
- Temperature range -40 °C ... +85 °C

## Technical characteristics

Locking	RJ45 acc. to IEC 60603-7
Number of contacts	8
Degree of protection	IP20
Rated voltage	125 V AC
Rated current	1.5 A
Mating face	RJ45 acc. to IEC 60603-7
Mating cycles	min. 750
Temperature range	-40 °C ... +85 °C
	UL approval

## HARTING RJ Industrial® RJ45 jacks for direct device integration

### Advantages

- Compact design
- Excellent EMC behaviour due to integrated transformers and filters for 10/100 Mbit or 1 Gbit Ethernet
- Versions from 10/100 Mbit up to 10 Gbit Ethernet resp. Cat. 5

### Technical characteristics

Mating face	RJ45 acc. to IEC 60603-7
Number of contacts	8
Degree of protection	IP20
Mating cycles	min. 750
Temperature range	-40 °C ... +85 °C

## HARTING RJ Industrial® RJ45 jacks with transformer

## Advantages

- Compact design
- Integrated optical fibres
- Excellent EMC behaviour due to integrated transformers and filters for 10/100 Mbit or 1 Gbit Ethernet
- SMC compatible
- Versions from 10/100 Mbit up to 10 Gbit Ethernet and PoE
- Usable for IP65 / IP67 device integration with HARTING PushPull and Han® 3 A RJ45

## Technical characteristics

Mating face	RJ45 acc. to IEC 60603-7
Number of contacts	8
Degree of protection	IP20
Rated voltage	30 V DC
Rated current	8 mA DC
Mating cycles	min. 750
Temperature range	-25 °C ... +70 °C

## HARTING RJ Industrial® 10G RJ45 bulkhead

### Advantages

- Compact and robust design
- 360° shielding
- Compatible with HIFF dimensions for use in:
  - Han® 3 A series
  - HARTING PushPull (V4)
  - Han® PushPull (V14)
  - har-port
- Details see page 01.11
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

### Technical characteristics

Mating face	RJ45 acc. to IEC 60603-7
Number of contacts	8
Transmission category	Cat. 6, performance class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet
Degree of protection	IP20
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated
Flammability acc. to UL 94 V0

HARTING RJ Industrial® cable jack  
(keystone version)

## Advantages

- Compact and robust design
- 360° shielding
- Category of transmission Cat. 6A
- Suitable for solid and stranded wires
- Field-assembly with *HARAX*® quick termination in IDC technology
- Keystone form factor – usable for DIN-rail outlet 09 45 851 0000 and a wide range of typical patch panels and wall outlets
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

Connector type	RJ45 connector acc. to IEC 60 603-7
Number of contacts	8
Transmission category	Category 6A, class EA, suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6A / Class EA up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mounting	Field-assembly
Cable termination	with IDC-contacts, without tools
Connectable cables	<ul style="list-style-type: none"> <li>- Conductor cross section AWG 27 ... <sup>2)</sup> For part number 09 45 545 1563 and 09 45 545 1122

## HARTING RJ Industrial® 10G Extender

**Advantages**

- Simple, fast and reliable connection of data cables
- Compact and robust design
- 360° shielding
- Category of transmission Cat. 6<sub>A</sub>
- Suitable for solid and stranded wires
- Field assembly without special tools

**Technical characteristics**

Connector type	RJ45 connector acc. to IEC 60 603-7
Number of contacts	8
Transmission category	Category 6 <sub>A</sub> , Class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6 <sub>A</sub> / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mounting	IDC termination
Connectable cables – Conductor cross section	AWG 23 ... AWG 22 (solid and stranded)
– Conductor diameter	1.3 ... 1.6 mm
Cable diameter	5 ... 9 mm
Degree of protection	IP20
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

**Application**

- Extension of cables for data communication
- Connection of cables with different cross-sections
- Linking of fire compartments

## Identification

## Drawing

## Dimensions in mm

HARTING RJ Industrial®  
10G Extender

09 45 545 1569

## HARTING RJ Industrial® connector set RJ45, 4-poles

## Advantages

- RJ45 Ethernet-Data connector suitable for industry
- Tool-less field-assembly with HARAX® rapid termination in IDC technology
- Compact design
- Ergonomical unlocking clip
- Less weight assures shock- and vibration-resisting connection
- Category of transmission Cat. 5
- Suitable for termination of solid and stranded cables
- Up to 10 x reconductable
- PROFINET compatible
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

Connector type	RJ45 connector acc. to IEC 60603-7
Number of contacts	4
Transmission performance	Category 5 / Class D up to 100 MHz acc. to ISO/IEC 11801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s
Mounting	field-assembly
Cable termination	with IDC-contacts, without tools
Connectable cables	
- Conductor cross section	AWG 24/7 ... AWG 22/7 (stranded) AWG 23/1 ... AWG 22/1 (solid) AWG 26/7 (09 45 151 1109) max. 1.6 mm (09 45 151 1100 / 09 45 151 1108) max. 1.2 mm (09 45 151 1109) 6.1 ... 6.9 mm
- Conductor diameter	min. 750
- Cable diameter	IP20
Mating cycles	-40 °C ... +70 °C
Degree of protection	Polyamide, UL 94-V0
Temperature range	
Housing material	black
Colour	UL approval (E102079)

Identification	Part number	
HARTING RJ Industrial® Stripping Tool Stripping tool for Ethernet cables including blade cassette	09 45 800 0000	 The RJ Industrial Stripping Tool is ready to remove insulation from cables for fast mounting with diameters from 2.5 to 8 mm quick and easy. It allows to remove cable sheath and shielding braid in one.
Spare blade cassette	09 45 800 0001	
Stripping tool	09 45 800 0002	
HARTING RJ Industrial® Gigalink Mounting tools for HARTING RJ Industrial® Gigalink connectors  for HARTING RJ Industrial® Gigalink Cat. 6A compact connectors	09 45 800 0520  09 45 800 0025	 With the RJ Industrial Gigalink Assembly Tool Ethernet connectors can be quickly, easily and reliably connected to flexible cables.
Wire cutter	09 45 800 0005	
Cable shear	09 45 800 0004	

HARTING RJ Industrial® system cable  
RJ45, 4-wire, IP20  
RJ45 patch cords for switch cabinet or PLC

Description	Part number		Technical characteristics
	Standard	Multiport	
For the cabling of Industrial Ethernet networks (for example in accordance with the PROFINET guideline), based on RJ45 connectors.  Wiring: Contacts RJ45 1/2 and 3/6			<p>Transmission properties in accordance with ISO/IEC 11 801:2002: Class D</p> <p>Mating face: 2 x RJ45 in acc. with IEC 60 603-7</p> <p>Protection level: IP20 (if mated)</p> <p>Temperature range -40 °C ... +70 °C</p> <p><b>Electrical characteristics at 20 °C</b></p> <p>Contact resistance: ≤ 20 mΩ</p> <p>Insulation resistance: ≥ 500 MΩ</p> <p>Dielectric withstand voltage: contact - contact 1 kV contact - ground 1.5 kV</p> <p><b>Electrical characteristics after damp heat cycles</b></p> <p>Contact resistance: ≤ 20 mΩ</p> <p>Insulation resistance: ≥ 100 MΩ</p> <p>Dielectric withstand voltage: contact - contact 1 kV contact - ground 1.5 kV</p>
HARTING RJ Industrial® system cable RJ45, 4-wire  Type A 	Length 1.5 m 09 45 771 0023 Length 3.0 m 09 45 771 0025 Length 5.0 m 09 45 771 0027 Length 10.0 m 09 45 771 0051 Length 20.0 m 09 45 771 0053	09 47 343 4006 09 47 343 4009 09 47 343 4012 09 47 343 4018 09 47 343 4020	<p>Cable type: Industrial Ethernet Standard Cable, 2 x 2 x AWG 22/1, double shielding (PROFINET Typ A)</p> <p>Sheath: PVC green, Ø 6.5 mm</p> <p>Connectors: 2 x HARTING RJ Industrial® IP20 Data with overmolded housings</p>

## Ha-VIS preLink® RJ45 connector

## Advantages

- RJ45 Ethernet-Data connector suitable for industry
  - Compact and robust design
  - 360° shielding
  - Ergonomically unlocking clip
  - Category of transmission Cat. 6A
  - Suitable for solid and stranded wires
  - Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

Connector type	RJ45 connector acc. to IEC 60 603-7
Number of contacts	8
Transmission category	Category 6A, Class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6A / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mounting	IDC termination
Cable termination for preLink® terminal module, yellow, 20 82 000 0001	
Connectable cables	
– Conductor cross section	AWG 23 ... AWG 22 (solid and stranded)
– Conductor diameter	1.3 ... 1.6 mm
Cable termination for preLink® terminal module, white, 20 82 000 0003	
Connectable cables	
– Conductor cross section	AWG 27 ... AWG 26 (solid and stranded)
– Conductor diameter	0.8 ... 1.1 mm
Cable diameter	5 ... 9 mm
Degree of protection	IP20
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

Identification	Part number	Drawing	Dimensions in mm

<sup>1)</sup> Packaging with 10 pieces

Ha-VIS preLink® RJ45 jacks (HIFF)

## Advantages

- Compact and robust design
- Category of transmission Cat. 6
- Suitable for solid and stranded wires
- Compatible with HIFF dimensions for use in:
  - Han® 3 A series with HIFF adapter 09 45 515 0024
  - HARTING PushPull (V4)
 

Compact bulkhead mounting housing	09 45 545 0028
EasyInstall bulkhead mounting housing	09 45 545 0032
  - Han® PushPull (V14)
 

Panel feed-through plastic	09 35 012 0331
Panel feed-through metal rectangular	09 35 012 0311
Panel feed-through metal circular	09 35 012 0312
  - har-port 09 45 452 0000
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

Connector type	RJ45 connector acc. to IEC 60 603-7
Number of contacts	8
Transmission category	Category 6A, Class EA, suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6A / Class EA up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact

<sup>1)</sup> Packaging with 10 pieces

**Ha-VIS preLink®  
19“ Patch panel, HIFF**

## Advantages

- Flexible, suitable for Ha-VIS preLink® modules RJ45 jack and HARTING RJ Industrial® modules in HIFF size
- Economical, time-saving installation due to the sliding module carrier, frontward and backward removal
- Safety, additional strain-relief
- Fully shielded modules connected by module carrier
- Earth bolt
- IP20 installation for distributors and switch cabinets

## Technical characteristics

Number of modules	24
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	up to 10 Gbit/s
Assembly	in 19“ racks acc. to IEC/DIN EN 60 297-3-100 (DIN 41 494-1)
Dimensions (W x H x D)	482.6 mm (19“) x 44.5 mm (1 U) x 181 mm
Degree of protection	IP20
Operating temperature range	-40 °C ... +70 °C
Material	
module carrier, 2-parts	steel sheet
front cover	stainless steel

Identification	Part number	Drawing	Dimensions in mm
Ha-VIS preLink® 19“ patch panel, unloaded	20 82 400 0001	 	
Suitable modules: • Ha-VIS preLink® RJ45 jack, HIFF • mixed loading possible		  	
Range of delivery:: • Screw set M5 • 24 cable ties • 1x earth conductor 6 mm <sup>2</sup>			

**Ha-VIS preLink®  
HIFF RJ45 AP Box**

**Advantages**

- Flexible, suitable for on-wall mounting or for top-hat mounting rail (35 mm)
- Economical, time-saving installation due to the use of pre-assembled data cables with Ha-VIS preLink® termination
- Robust design, powder-coated steel plate housing
- Structured cabling for industrial premises

**Technical characteristics**

Number of ports, Copper / Termination	2 / RJ45 jack HIFF
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	up to 10 Gbit/s
Shielding	Fully shielded, 360° shielding contact
Cable diameter	5 mm ... 9 mm
Mounting	on-wall or DIN Rail
Dimensions (WxHxD)	60 x 81 x 70 mm
Degree of protection	IP20
Operating temperature	-40 °C ... +70 °C
Housing material	steel plate
Colour	Anthracite grey (RAL 7016)

Identification	Part number	Drawing	Dimensions in mm
Ha-VIS preLink® HIFF RJ45 AP Box	20 82 101 0220		Dimensions in mm: Front View: 60 (width), 81 (height), 70 (depth) Rear View: 40 (width), 20 (depth), 15 (height)
Accessory DIN Rail mounting bracket	20 80 000 0003		Dimensions in mm: 39 (width), 20 (depth), 50 (height) Assembly instruction (1): Shows two mounting holes with a distance of 15 mm from the bottom edge.

Ha-VIS preLink®  
Han® PushPull Metal Outlet  
and Han® 3 A Metal Outlet

## Advantages

- Simple mounting, fixing and earth connection both outside
- Fast termination of data cables due to Ha-VIS preLink® technology
- Structured cabling for industrial premises
- Mating face AIDA compliant, protection cover incl.
- PROFINET compatible

## Technical characteristics

Number of ports, Copper / Termination	2 x Han® PushPull RJ45 (IP65 / IP67) or Han® 3 A RJ45
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	up to 10 Gbit/s
Termination	Ha-VIS preLink®
Wire gauge	AWG 24 ... 22 (0.25 mm <sup>2</sup> ... 0.34 mm <sup>2</sup> ) solid and stranded
Strand diameter	Ø 1.3 mm ... 1.6 mm
Cable diameter	7.2 mm ... 8 mm
Shielding	Fully shielded 360° flexible shielding termination
Mounting	Wall mounting
Dimensions (H x W x D)	105 x 105 x 40.5 mm
Degree of protection	IP65 / IP67
Operating temperature range	-40 °C ... +70 °C
Housing material	Aluminium, die-cast
Colour	Black

## Ha-VIS preLink® 19“ Patch panel, keystone

### Advantages

- Suitable for Ha-VIS preLink® RJ45 module in keystone size
  - Economic due to easy design
  - Safety, additional strain-relief
  - Fully shielded modules connected through metal holding fixture
  - Earth bolt

### Technical characteristics

Number of modules	24
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	up to 10 Gbit/s
Module design	Keystone size acc. to EN 60 603-7:2009
Assembly	in 19“ racks acc. to IEC/DIN EN 60 297-3-100 (DIN 41 494-1)
Dimensions (W x H x D)	482.6 mm (19“) x 44.5 mm (1 U) x 107 mm
Degree of protection	IP20
Operating temperature range	-40 °C ... +70 °C
Material	steel sheet

Identification	Part number	Drawing	Dimensions in mm
Ha-VIS preLink® 19“ patch panel, keystone	20 82 405 0001		
Range of delivery: 24 pieces of: • Ha-VIS preLink® RJ45 keystone jack • terminal modules for AWG 22 / 23 • strain relief			
Ha-VIS preLink® 19“ patch panel, keystone empty	20 82 400 0002		

HARTING Cabinet Outlet RJ45, 8-poles  
RJ45 distribution module for IP20 environments  
(top-hat rail mounting)

## Advantages

- Simple mounting
- Dust protection caps
- Port identification
- Angled output

## Technical characteristics

Number of ports, Copper / Termination	1 / RJ45 (Twisted Pair)
Transmission performance	Category 6A / Class EA up to 250 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Mounting	To 35 mm top-hat mounting rail acc. to DIN EN 60 715, alignable
Dimensions (H x W x D)	71 x 18 x 68 mm
Degree of protection	IP20
Operating temperature range	-20 °C ... +70 °C
Housing material	Polyamide, UL94 V-0
Colour	Grey

Ha-VIS preLink® Patch cables

## Advantages

- Pre-assembled system cable, fast, flexible and reliable in the application
- Simple in handling
- Robust in design
- Installation of Ha-VIS preLink® cables for industrial environment
- Connection cable for control or distributor cabinets or within controllers

## Technical characteristics

Cable types	4 x 2 AWG 27/7, shielded, S/FTP Cat. 7
Sheath material	PUR
Wiring	TIA/EIA 568B, 1:1
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	up to 10 Gbit/s
Shielding	Copper braid, tinned
Operating temperature range	-35 °C ... +70 °C
fixed operation	-5 °C ... +50 °C
flexible operation	
Standard lengths	0.6 m / 1 m / 2 m / 3 m / 5 m / 10 m other lengths available on request
Colour	Yellow

## Ha-VIS preLink® Extender

## Advantages

- Simple, fast and reliable connection of data cables
- Compact and robust design
- 360° shielding
- Category of transmission Cat. 6A
- Suitable for solid and stranded wires

## Technical characteristics

Connector type	RJ45 connector acc. to IEC 60 603-7
Number of contacts	8
Transmission category	Category 6A, Class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6A / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mounting	IDC termination
Cable termination for preLink® terminal module, yellow, 20 82 000 0001	
Connectable cables	
– Conductor cross section	AWG 23 ... AWG 22 (solid and stranded)
– Conductor diameter	1.3 ... 1.6 mm
Cable termination for preLink® terminal module, white, 20 82 000 0003	
Connectable cables	
– Conductor cross section	AWG 27 ... AWG 26 (solid and stranded)
– Conductor diameter	0.8 ... 1.1 mm
Cable diameter	5 ... 9 mm
Degree of protection	IP20
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

## Application

- Extension of cables for data communication
- Connection of cables with different cross-sections
- Linking of fire compartments

Identification	Part number	Drawing	Dimensions in mm

## Notes

## 02. PushPull Connectors

A distributed automation system does not contain any central automated control cabinets. Controls, sensors and actuators are designed for a high degree of protection (IP65 / IP67) and are installed directly in the field. In connection with these innovative installation concepts with distributed devices, users are demanding a standard connector family that is compatible with all interfaces. In response to these needs, the HARTING PushPull series has set the respective new appliance connection standard. PushPull technology is available for data, signal and power applications. Other interfaces accommodating USB or fiber optics (LC, SCRJ) supplement the universal range of the PushPull solutions. The integration of communication and power lines in a hybrid PushPull connector is a genuine trend-setting advance. In view of these strengths, the PushPull container has become the standard for current and future appliance interfaces. The German automotive industry, for example, has opted for the implementation of the PushPull connector family.

### Application profile:

## 02. PushPull Connectors

The PushPull connector housing is a function container with degree of protection IP65 / IP67 and is available in two standardized housing sizes. These containers are equipped with standard RJ45, FOC or power contacts for operation at 5 x 16 A, depending on application requirements. The PushPull connector can be delivered either as plastic, or as metal variant, depending on the installation environment.

### THE PushPull PRINCIPLE

PushPull connector applications combine two basic advantages:

1. Simple operation
2. Safe and vibration resistant sealed IP65 / IP67 connection.

The innovative PushPull lock mechanism dispenses with the need for a latching bracket. The connector can be inserted with one hand, minimum force and an audible click for safe operation.

The connection can be removed again just as easily for service work.

### COPPER, FOC AND POWER – IN THE SAME DESIGN

HARTING offers two series of the PushPull connector system, which differ in terms of their outer dimensions and module inserts.

### Han® PushPull (IEC 61 076-3-117 VARIANT 14)

This series represents the standard PROFINET device interface for the IP67 environment of the German automobile manufacturing industry.

The connector is available as metal and as plastic version. The RJ45 module for copper conductors and the SCRJ module for FOCs are available as data connectors. The RJ45 variant is realized by means of the RJ Industrial module equipped with *HARAX®* quick connection technology. The power module which is installed in the same container can be assembled on-site, either with crimp contacts or with innovative Quick Lock® technology in order to wire the distributed field devices to 230/400 V (16 A) power. This 5-pole connector enables the transfer of two independent 24 V control

circuits with functional ground, or the transfer of a three-phase voltage of 400 V (16 A).

## HARTING PushPull (IEC 61 076-3-106 VARIANT 4)

This extremely compact and space-saving series provides an Ethernet appliance connection with degree of protection IP65 / IP67 that requires no more installation space than a M12 connector. The RJ45 variant for copper conductors and the LC variant for FOCs are available as modules for data connectors. The RJ45 variant is realized by means of HARAX® quick connection technology as used with HARTING RJ Industrial®. The 4-pole module for 48 V (12 A) or the 3-pole module for 250 V (16 A) can be used to supply power to the distributed field devices.

## HARTING PushPull HYBRID

The migration from Fieldbus to Ethernet within communication technology has simplified machine installation options. This

simplification is attained by combining the data and the 24 V power lines in a single hybrid cable with hybrid connector, in connection with the spatial requirements of an M12 connector. The HARTING PushPull Hybrid offers trend-setting connection technology for this new method of machine installation.

The PushPull Hybrid reduces everything by half: the number of connection points and cables, and spatial requirements for the connection technology.

The PushPull Hybrid makes everything easier: machine installation, the wiring of connectors and safe insertion.

## APPLIANCE INTEGRATION:

In order to support the implementation of appliances with degree of protection IP65 / IP67, HARTING offers panel feed-through devices with integrated couplings and female contact modules for direct mounting on PCBs.

### HARTING PushPull

#### ONE CONCEPT FOR DATA, SIGNAL AND POWER

The internationally standardized PushPull connector represents the latest generation of appliance connection technology with high degree of protection IP65 / IP67, easy insertion and snap-action engagement with audible click.

The PushPull housing family is designed for the integration of a wide range of contact inserts for data, signal and power lines.

### INSTALLATION IN PLANTS

#### WITH Han® PushPull CONNECTORS:

- The standard for PROFINET communication
- One housing for the electrical and optical data transfer and for power supply
- Plastic or metal housing variants

### INSTALLATION IN MACHINES

#### WITH HARTING PushPull HYBRID CONNECTORS:

- Combined data lines and appliance power supply up to 5 A in the same connector
- Compact size (comparable with M12)

### POWER SUPPLY TO DISTRIBUTED DEVICES

#### USING PushPull CONNECTORS:

- Variant 4: 48 V (12 A), 4-pole or 250 V (16 A), 3-pole
- Variant 14: 400 V (12 A) 5-pole, or 24 V (16 A) 5-pole
- Latest connection technology QuickLock® for on-site assembly without special auxiliary tools

HARTING PushPull Technology acc. to IEC 61076-3-106 variant 4  
housing bulkhead mounting for device integration of RJ45-, USB- and Power-jacks

## Advantages

- PushPull housing bulkhead mounting with HARTING PushPull technology
- Compact, space-saving design for device integration of RJ45-, USB-, Signal- or Power-pcb female

### Housing bulkhead mounting EasyInstall

- for simple device integration round panel cut out

### Housing bulkhead mounting Compact

- high packing density  
(spacing 27 x 21 mm)

## Technical characteristics

Locking	PushPull Technology acc. to IEC 61076-3-106 variant 4
Shielding	fully shielded, 360° shielding contact
Mating cycles	min. 750
Degree of protection	IP65 / IP67
Temperature range	-40 °C ... +70 °C
Housing material	Plastic, black Zinc die-cast, shining
Flammability acc. to UL 94	V0
	UL approval (E102079)

## HARTING RJ Industrial® RJ45 jacks with transformer

### Advantages

- Compact design
- Integrated optical fibres
- Excellent EMC behaviour due to integrated transformers and filters for 10/100 Mbit or 1 Gbit Ethernet
- SMC compatible
- Versions from 10/100 Mbit up to 10 Gbit Ethernet and PoE
- Usable for IP65 / IP67 device integration with HARTING PushPull and Han® 3 A RJ45

### Technical characteristics

Mating face	RJ45 acc. to IEC 60603-7
Number of contacts	8
Degree of protection	IP20
Rated voltage	30 V DC
Rated current	8 mA DC
Mating cycles	min. 750
Temperature range	-25 °C ... +70 °C

PushPull

HARTING PushPull RJ45 – bulkhead

## Advantages

- Small, space-saving PushPull Interfaces in IP65 / IP67
- Easy connection of PushPull RJ45 system cords
- Screwable with 2 x M3 screws

## Technical characteristics

Locking	PushPull Technology acc. to IEC 61 076-3-106 variant 4
Number of contacts	8
Transmission category	Cat. 6, performance class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet
Transmission rate	10/100 Mbit/s / 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mating cycles	min. 750
Degree of protection	IP65 / IP67
Temperature range	-40 °C ... +70 °C
Housing material	Plastic, black
Flammability acc. to UL 94	V0
	UL approval (E102079)

<sup>1)</sup> Packaging with 100 sets

HARTING PushPull type acc. to IEC 61076-3-106 variant 4  
LC duplex panel feed-through and connector

## Advantages

- Optical PushPull connector based on LC with small form factor (requires 50 % compared to SC and ST)
- EasyInstall and Compact panel feed-through for simple device integration
- Optical module with inserts acc. to IEC 61754-20
- One-piece LC body assures high mechanical stability
- A & B parts identification for Duplex according TIA 568 standard

## Technical characteristics

Locking	PushPull Technology acc. to IEC 61076-3-106 variant 4
Degree of protection	IP65 / IP67
Mating face	LC acc. to IEC 61754-20
Cable diameter	5.8 ... 7.2 mm

HARTING PushPull Hybrid  
type acc. to IEC 61076-3-106 variant 4

## Advantages

### HARTING PushPull Hybrid

In the future all new machine generations will be equipped with Fast Ethernet, no matter if PROFINET, Ethernet/IP, Powerlink, Ethercat, Varan or other Ethernetprofiles.

With the change of the communication technology also the possibility is offered of simplifying the machine installation and of introducing an innovative Hybrid installation concept. This simplification will unite by data and 24 V (5 A)-supply in a Hybrid cable, at least with the space requirement of a M12-connector.

For this new installation solution HARTING with the HARTING PushPull Hybrid offers the trend-setting installation technology.

Everything is halved: the number of pluggings, the number of cables and the space requirement for the connection technology. Everything becomes simpler: the installation, attaching and safe plugging.

The Hybrid connectors were developed particular under the criteria of simple attaching in the field and the particular safe data communication with the patented omega screen concept. As contacts D-Sub and HDD Sub contacts worked world-wide are used. This socket pin contact system ensures highest reliability and optimal shock and vibration stability.

With the optional available coding pins 6 different codings can be realized.

## Technical characteristics

### Advantages

- Compact, space-saving design
- Very compact housing with high degree of protection
- Polarisation with nose
- Sixfold codable

### Typical application areas

- Factory and building automation
- Industrial electronics
- Telecommunication and wireless networks
- Transportation
- Industrial monitoring and camera systems
- Lighting and display technology
- Access control systems

### Recommended pin assignment

- Power contacts

Contact	Function	Conductor colour
1	V +	Red
2	Ground	Brown
3	V + (switched)	Yellow

- Data contacts

Contact	Signal	Function	Conductor colour
4	RD -	Receiver Data -	Blue
5	RD +	Receiver Data +	White
6	TD -	Transmission Data -	Orange
7	TD +	Transmission Data +	Yellow

Structure Hybrid cable

Data: 4x AWG26/7

Power: 3x AWG20/7

# HARTING PushPull Hybrid

HARTING PushPull Hybrid, type acc. to IEC 61076-3-106 variant 4  
device side

## Advantages

- Combined data- and power-supply up to 5 A/48 V included to one connector
- HARTING PushPull technology
- Compact design
- High packing density
- Sixfold codable
- Suitable for all Fast-Ethernet variants

## Technical characteristics

Locking	PushPull Technology acc. to IEC 61076-3-106 variant 4
Degree of protection	IP65 / IP67
Termination	Solder pins
Transmission performance	Category 5 / Class D up to 100 MHz acc. to ISO/IEC 11801:2002, EN ISO 50173-1
Transmission rate	10 / 100 Mbit/s
Number of contacts	Data: 4, shielded (Ethernet) Power: 3, (5 A / 48 V)
Housing material	Plastic, black
Flammability acc. to UL 94	V0

HARTING PushPull, type acc. to IEC 61 076-3-106 variant 4  
10-poles 50 V / 5 A

## Features

- HARTING PushPull technology
- For the transmission of analog, low voltage and bus signals
- Fully shielded
- 10 contacts
- Touch-proof
- Easy and fast cable installation

## Technical characteristics

Locking	PushPull technology acc. to IEC 61 076-3-106 variant 4
Degree of protection	IP65 / IP67
Mating face	acc. to IEC/PAS 61076-3-11x
Number of contacts	10
Electrical data acc. to DIN EN 61984	5 A 50 V 1.5 kV 3
Contact resistance	10 mΩ
Termination	Crimp or solder
Conductor cross section	AWG 24 ... 18; 0.25 ... 0.82 mm <sup>2</sup>
Conductor diameter	max. 2.1 mm
Outer cable diameter	4.9 ... 8.6 mm
Shielding	Fully shielded, 360° shielding contact
Mating cycles	min. 500
Temperature range	-40 °C ... +70 °C
Housing material	Plastic, black
Flammability acc. to UL 94	V0

Identification	Part number	Drawing	Dimensions in mm

HARTING offers with the HARTING PushPull Power connector an universal solution for the power supply in compact and robust applications. It is in its element wherever small dimensions are combined with a high protection class.

The connector is available in a 4-pole 48 V and a 2-pole 250 V version. The power contacts can carry up to 12 resp. 16 A each (see deratings). In spite of this high current carrying capacity the connector gets by with minimal dimensions and fulfills the industrial requirements for clearances and creepage distances at the same time (pollution degree 3 and overvoltage category III).

Additionally the HARTING PushPull Power connector offers the protection class of IP67 and 65. Beside numerous industrial use cases it is thereby suited for diverse applications in the fields of transportation and telecommunication.

The cable side of the HARTING PushPull Power is terminated with crimping technology. For the receptacle several solutions with different termination technologies are offered.

- Regulations**
- VDE 0110
  - DIN EN 61 984

## Advantages

- Minimum space requirements in spite of high current carrying capacity
- Very compact housing in a high protection class
- Protection against contact on plug AND receptacle side enables an easy and safe installation
- For low voltage (48 V) and for power supply (250 V) available
- Codeable without losing contacts
- Different termination technologies for individual device integration

## Typical application areas

- Factory and building automation
- Industrial electronics
- Telecommunication and wireless networks
- Transportation
- Industrial monitoring and camera systems
- Lighting and display technology
- Access control systems

## Current carrying capacity

The current carrying capacity is determined in tests which are conducted on the basis of the DIN IEC 60 512-5-2. The current carrying capacity is limited by the thermal properties of materials which are used for inserts as well as by the insulating materials. These components have a limiting temperature which should not be exceeded.

### Example of a current capacity curve

Derating-Diagram for low voltage, 48 V; 4x 12 A

Derating-Diagram for power supply, 250 V; 2x 16 A

HARTING PushPull Power 4/0, type acc. to IEC 61076-3-106 variant 4  
panel feed-throughs 4-poles 48 V / 12 A

## Advantages

- Power connectors for devices
- EasyInstall and Compact panel feed-through and females for simple device integration
- Compact, space-saving design
- Touch-proof according to IEC DIN EN 60 529
- Polarisation with nose
- Device side: female with cable cage, crimp or solder termination
- 4 different coding variants without loss of contact

<p><b>Crimp connection</b>  A perfect crimp connection is gastight, therefore corrosion free and amounts to a cold weld of the parts being connected. For this reason, major features in achieving high quality crimp connections are the design of the contact crimping parts and of course the crimping tool itself. Wires to be connected must be carefully matched with the correct size of crimp contacts. If these basic requirements are met, users will be assured of highly reliable connections with low contact resistance and high resistance to corrosive attack.</p> <p>The economic and technical advantages are:</p> <ul style="list-style-type: none"> <li>• Constant contact resistance as a result of precisely repeated crimp connection quality</li> <li>• Corrosion free connections as a result of cold weld action</li> <li>• Pre-preparation of cable forms with crimp contacts fitted</li> <li>• Optimum cost cable connection</li> </ul> <p>Requirements for crimp connectors are laid down in DIN IEC 60 352-2, Amend. 2, as illustrated in the table.</p> <p>Pull out force of stranded wire  The main criterion to judge the quality of a crimp connection is the retention force achieved by the wire conductor in the terminal section of the contact. DIN IEC 60 352, part 2, defines the extraction force in relation to the cross-section of the conductor. When fitted using HARTING crimping tools and subject to their utilization in an approved manner, our crimp connectors comply with the required extraction forces.</p>		<p><b>Tensile strength of crimped connections</b></p> <table border="1"> <thead> <tr> <th>Conductor cross-section</th> <th>Tensile strength</th> </tr> <tr> <th>mm²</th> <th>AWG</th> <th>N</th> </tr> </thead> <tbody> <tr><td>0.08</td><td>28</td><td>11</td></tr> <tr><td>0.12</td><td>26</td><td>15</td></tr> <tr><td>0.14</td><td></td><td>18</td></tr> <tr><td>0.22</td><td>24</td><td>28</td></tr> <tr><td>0.25</td><td></td><td>32</td></tr> <tr><td>0.32</td><td>22</td><td>40</td></tr> <tr><td>0.5</td><td>20</td><td>60</td></tr> <tr><td>0.75</td><td></td><td>85</td></tr> <tr><td>0.82</td><td>18</td><td>90</td></tr> <tr><td>1.0</td><td></td><td>108</td></tr> <tr><td>1.3</td><td>16</td><td>135</td></tr> <tr><td>1.5</td><td></td><td>150</td></tr> <tr><td>2.1</td><td>14</td><td>200</td></tr> <tr><td>2.5</td><td></td><td>230</td></tr> <tr><td>3.3</td><td>12</td><td>275</td></tr> <tr><td>4.0</td><td></td><td>310</td></tr> </tbody> </table> <p>Extract from DIN IEC 60 352-2, Amend. 2, Table IV</p>	Conductor cross-section	Tensile strength	mm²	AWG	N	0.08	28	11	0.12	26	15	0.14		18	0.22	24	28	0.25		32	0.32	22	40	0.5	20	60	0.75		85	0.82	18	90	1.0		108	1.3	16	135	1.5		150	2.1	14	200	2.5		230	3.3	12	275	4.0		310

<p><b>Crimping tools</b>  Crimping tools (hand operated or automatic) are carefully designed to produce with high pressure forming parts a symmetrical connection of the crimping part of the contact and the wire being connected with the minimum increase in size at the connection point. The positioner automatically locates the crimp and wire at the correct point in the tool.</p> <p>A ratchet in the tool performs 2 functions:</p> <ol style="list-style-type: none"> <li>① It prevents insertion of the crimp into the tool for crimping before the jaws are fully open</li> <li>② It prevents the tool being opened before the crimping action is completed</li> </ol> <p>Identical, perfectly formed, connections can be produced using this crimping system.</p>		 <p>Crimp-cross section HARTING crimp profile</p>

<sup>2)</sup> Packaging: Blister à 100 pieces

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
RJ45 panel feed through

## Features

- HARTING PushPull technology
- Compact design
- High packing density
- Device integration via RJ45 PCB connectors

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117
Degree of protection	IP65 / IP67
Mating face	RJ45 acc. to IEC 60603-7
Transmission performance	acc. to ISO/IEC 11801:2002, EN 50173-1, category 5 / class D up to 100 MHz resp. category 6 / class EA up to 500 MHz
Transmission rate	10 / 100 Mbit/s and 1 / 10 Gbit/s
Number of contacts	8
Shielding	Fully shielded, 360° shielding contact (Cat. 6)
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Plastic, black
Flammability acc. to UL 94	V0

Identification	Part number	Drawing	Dimensions in mm
<b>Han® PushPull RJ45</b> Panel feed through Cat. 6 including housing and HARTING RJ Industrial® 10G RJ45 bulkhead	09 35 225 0331		<b>Panel cut out</b> (22,2) 41 1.2 19,2 ± 0,1 Thickness panel: 1mm to 6mm, M3 screwing torque: 0,3 to 0,5 N.m. <small>MATING FACE according to IEC 61073-3-117</small>

Recommendation for female insert and assembly manual on request.

Han® PushPull, type acc. to IEC 61 076-3-117 variant 14  
RJ45 connector

## Features

- HARTING PushPull technology
- Field-assembly connector with IDC contacts
- Fully shielded

## Technical characteristics

Locking	PushPull technology acc. to IEC 61 076-3-117
Degree of protection	IP65 / IP67
Mating face	RJ45 acc. to IEC 60 603-7
Shielding	Fully shielded, 360° shielding contact
Number of contacts	4 respectively 8
Transmission performance	acc. to ISO/IEC 11 801:2002, EN 50 173-1, category 5 / class D up to 100 MHz, category 6 / class E <sub>A</sub> up to 500 MHz
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Termination	with IDC contacts, no tools needed / field-assembly
for Cat. 5	Conductor cross section AWG 24/7 - 22/7 (stranded) AWG 23/1 - 22/1 (solid)
for Cat. 6	Cable diameter 1.6 mm Conductor cross section AWG 22/7 - 27/7 (stranded) AWG 22/1 - 27/1 (solid)
Mating cycles	Cable diameter 1.6 mm
Temperature range	min. 750
Housing material	-40 °C ... +70 °C Plastic, black, UL 94 V0

2) Packaging: Blister à 100 pieces

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
RJ45 10G panel feed through

## Features

- HARTING PushPull technology
- Compact and robust design
- 360° shielding
- RJ45 mating compatible
- Transmission category 6, performance class E<sub>A</sub>, suitable for 1/10 Gigabit Ethernet
- PROFINET conform

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117 variant 14
Mating face	RJ45 acc. to IEC 60603-7
Transmission performance	Category 6 / class E <sub>A</sub> acc. to ISO/IEC 11801:2002, EN 50173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	Fully shielded, 360° shielding contact
Mounting	Screwable to cover plates
Degree of protection	IP65 / IP67
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

Han® PushPull RJ45 Genderchanger Metal  
Cat. 6 / Class E<sub>A</sub>

## Features

- High degree of protection IP65 / IP67
- Robust metal housing
- Standard PROFINET component of the German automotive production
- Allows usage of different cable types (Type B, C) e.g. in robots application
- Extension of cords according to PROFINET guideline
- Can be counted as one connection acc. to IEC 11801 Chapter 10.2.4

## Technical characteristics

Transmission performance	Cat. 6 / Class E <sub>A</sub> up to 500 MHz
Connector	Han® PushPull RJ45 (PROFINET conform)
Locking	PushPull technology acc. to IEC 61076-3-117 variant 14
Mating face	RJ45 acc. to IEC 60603-7
Mating cycles	min. 750
Housing material	Aluminium anodized
Dimensions	61.2 x 62 x 25.2 mm (unmated)
Degree of protection acc. to DIN 60529	IP65 / IP67 (mated)
Mounting	Wall mountable with 4 screws (type M5)
Temperature range	-40 °C ... +70 °C
Maximum permissible humidity	30 % ... 95 % (no condensation)

Identification	Part number	Drawing	Dimensions in mm
Han® PushPull RJ45 Genderchanger metal	09 35 221 0501		

## Han® PushPull RJ45 Coupling Metal Cat. 6 / Class E<sub>A</sub>

### Features

- High degree of protection IP65 / IP67
- Robust metal housing
- Standard PROFINET component of the German automotive production
- Extension of cords according to PROFINET guideline
- Can be counted as one connection acc. to IEC 11801 Chapter 10.2.4
- For an easy robot termination and a fast exchange of tube packages

### Technical characteristics

Transmission performance	Cat. 6 / Class E <sub>A</sub> up to 500 MHz
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Locking	PushPull technology acc. to IEC 61076-3-117 variant 14
Mating face	RJ45 acc. to IEC 60603-7
Number of contacts	8
Usable cables	
Termination cross section	AWG 22-24 stranded/solid
Cable diameter	5 ... 9 mm
Conductor diameter	1.3 ... 1.6 mm
Mating cycles	min. 750
Housing material	Aluminium die-cast
Degree of protection acc. to DIN 60529	IP65 / IP67
Temperature range	-40 °C ... +70 °C

Identification	Part number	Drawing	Dimensions in mm
Han® PushPull RJ45 Coupling metal <small>including housing, Ha-VIS preLink® RJ45 jack, bulkhead housing and cable gland</small>	61 04 201 1084		
Fixing flange	61 04 600 0182		02 41

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
RJ45 connector

## Features

- HARTING PushPull technology
- Field-assembly connector with IDC contacts
- Fully shielded

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117
Degree of protection	IP65 / IP67
Mating face	RJ45 acc. to IEC 60603-7
Shielding	Fully shielded, 360° shielding contact
Number of contacts	4 respectively 8
Transmission performance	acc. to ISO/IEC 11801:2002, EN 50173-1, category 5 / class D up to 100 MHz category 6 / class EA up to 500 MHz
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Termination	with IDC contacts, no tools needed / field-assembly
for Cat. 5	
Conductor cross section	AWG 24/7 - 22/7 (stranded) AWG 23/1 - 22/1 (solid)
Cable diameter	1.6 mm
for Cat. 6	
Conductor cross section	AWG 22/7 - 27/7 (stranded) AWG 22/1 - 27/1 (solid)
Cable diameter	1.6 mm
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

Identification	Part number	Drawing	Dimensions in mm
Connector set, metal  incl. housing and male insert 4 - 11 mm clamp range

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
RJ45 connector

## Features

- HARTING PushPull technology
- Compact design
- For space saving fitting conditions
- Connector with piercing contacts
- 360° shielding

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117
Degree of protection	IP65 / IP67
Mating face	RJ45 acc. to IEC 60603-7
Shielding	Fully shielded, 360° shielding contact
Number of contacts	8
Transmission performance	acc. to ISO/IEC 11801:2002, EN 50173-1, category 6A / class EA up to 500 MHz
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Termination	with piercing contacts
Conductor cross section	AWG 24/7 - 27/7 (stranded)
Cable diameter	1.05 mm
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

Identification	Part number	Drawing	Dimensions in mm
Connector set, metal  incl. housing and male insert 4 - 11 mm clamp range			
Han® RJ Industrial Category 6, 8-poles, piercing contacts	09 35 227 0401		
suitable assembly tool	09 45 800 0520		

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
preLink® RJ45-connector, straight and angled

## Advantages

- HARTING PushPull technology
- 45° angled cable entry, bottom side, for space saving cabling
- 360° shielding
- Category of transmission Cat. 6A
- Suitable for solid and stranded wires
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117	
Degree of protection	IP65 / IP67	
Mating face	RJ45 acc. to IEC 60603-7	
Number of contacts	8	
Transmission category	Category 6A, Class E <sub>A</sub> , suitable for 1/10 Gigabit Ethernet	
Transmission performance	Category 6A / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11801:2002, EN 50173-1

Han® PushPull, type acc. to IEC 61 076-3-117 variant 14  
 Housing bulkhead mounting for device integration  
 Optical connector based on SCRJ

PushPull

## Features

- HARTING PushPull technology
- Compact design
- High packing density
- Device integration via transceiver
- Han® PushPull SCRJ for POF is according the requirements of AIDA (German Domestic Automobile Manufacturers)

## Technical characteristics

Locking	PushPull technology
Degree of protection	IP65 / IP67
Mating face	SCRJ acc. to IEC 61754-24

## Han® PushPull SCRJ Genderchanger Metal

## Features

- High degree of protection IP65 / IP67
- Robust metal housing
- Standard PROFINET component of the German automotive production
- Allows usage of different cable types (Type B, C) e.g. in robots application
- Extension of cords according to PROFINET guideline

## Technical characteristics

Locking	PushPull technology
Degree of protection	IP65 / IP67 (mated)
Mating face	SCRJ acc. to IEC 61754-24
Fibre types	POF, GOF, HCS
Number of contacts	2
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated
Dimensions	43.3 x 42 x 29 mm (unmated)
Mounting	Wall mountable with 2 screws (type M3)

Identification	Part number	Drawing	Dimensions in mm
Han® PushPull SCRJ Genderchanger metal	09 35 241 0501		

Han® PushPull SCRJ POF crimp  
Assembly tools for polymer-optical fibres

## Features

- Cable insulation (PUR / PVC) is stripped without damage
- The 'crimping' and 'precision cutting' operations are completed within the one tool
- Specialized cutting method with an automatically advancing round blade for an accurate cutting result requiring no final polishing
- Optical display indicating remaining operations
- Simultaneous crimping of two contacts (duplex handling)

## Technical characteristics

Connector type	SCRJ crimp connector acc. to IEC 61754-24
Locking	PushPull technology acc. to IEC 61076-3-117 variant 14 (AIDA compliant)
Insertion loss	typically 1.5 to 2.0 dB
Termination SC contacts	Crimp termination technique
Fibre dimensions	POF 980 / 1000 µm
Fibre outer diameter	2.2 mm
Cable outer diameter	7 to 8.5 mm
No. of cutting operations	Maximum 1260

Identification	Part number	Drawing	Dimensions in mm
Assembly tool set for POF crimp cutting, without final polishing  The set contains - one crimping and cutting tool for 1260 operations - one sheath stripping tool - one Kevlar shear - one loading device for SC contacts  Supplied in a robust plastic case	09 35 000 9915		
Replacement cutting tool	09 35 000 9914		

Han® PushPull SCRJ POF  
Assembly tools for polymer-optical fibres

## Features

- Cable insulation (PUR / PVC) is stripped without damage
- The 'stripping' and 'precision cutting' operations are completed within the one tool
- Specialized cutting method with an automatically advancing round blade for an accurate cutting result requiring no final polishing
- Optical display indicating remaining operations
- Simultaneous handling of twin fibers (duplex mode)

## Technical characteristics

Connector type	SCRJ connector acc. to IEC 61754-24
Locking	PushPull technology acc. to IEC 61076-3-117 variant 14 (AIDA compliant)
Insertion loss	typically 1.5 to 2.0 dB
Termination SC contacts	Fast termination technique, reusable
Fibre dimensions	POF 980 / 1000 µm
Fibre outer diameter	2.2 mm
Cable outer diameter	7 to 8.5 mm
No. of cutting operations	Maximum 1260

Identification	Part number	Drawing	Dimensions in mm
Assembly tool set for POF cutting, without final polishing	09 35 000 9913		
The set contains - one stripping and cutting tool for 1260 operations - one sheath stripping tool - one Kevlar shear - one positioner for SCRJ contacts Supplied in a robust plastic case			
Replacement cutting tool for 1260 operations	09 35 000 9914		
Assembly tool set for POF cutting, with final polishing Without an optical meter With an optical meter	20 99 000 3016 20 99 000 3013

# Han® PushPull Signal

Han® PushPull, type acc. to IEC 61076-3-117 variant 14  
10-poles 50 V / 5 A

## Features

- HARTING PushPull technology
- For the transmission of analog, low voltage and bus signals
- Fully shielded
- 10 contacts
- Touch-proof
- Easy and fast cable installation

## Technical characteristics

Locking	PushPull technology acc. to IEC 61076-3-117 variant 14
Degree of protection	IP65 / IP67
Mating face	acc. to IEC/PAS 61076-3-119
Number of contacts	10
Electrical data acc. to DIN EN 61984	5 A 50 V 1.5 kV 3
Contact resistance	10 mΩ
Termination	Crimp
Conductor cross section	AWG 24 ... 18; 0.25 ... 0.82 mm <sup>2</sup>
Conductor diameter	max. 2.1 mm
Outer cable diameter	6.5 ... 9.5 mm / 4 ... 11 mm
Shielding	Fully shielded, 360° shielding contact
Mating cycles	min. 500
Temperature range	-40 °C ... +70 °C
Housing material	Plastic, black Zinc die-cast, nickel-plated
Flammability acc. to UL 94	V0

Identification	Part number	Drawing	Dimensions in mm

Han® PushPull L Power 4/0 Genderchanger Metal  
Han® PushPull L Power 4/0 H-distributor Metal

## Features

- High degree of protection IP65 / IP67
- Robust metal housing
- Standard PROFINET component of the German automotive production
- Allows usage of different cable types (Type B,C) e.g. in robots application
- Extension of cords according to PROFINET guideline
- 4-way-distribution of power signals

## Technical characteristics

Connector	Han® PushPull L Power 4/0
Locking	PushPull technology
Electrical transmission	16 A / 24 V
Number of contacts	5
Mating cycles	min. 500
Housing material	Aluminium anodized
Dimensions	83.4 x 62 x 40.7 mm (unmated)
Degree of protection acc. to DIN 60529	IP65 / IP67 (mated)
Mounting	Wall mountable with 4 screws (type M5)
Temperature range	-20 °C ... +50 °C
Maximum permissible humidity	30 % ... 95 % (no condensation)

## 03. Circular Connectors

Circular connectors represent a widespread industrial standard for wiring sensors and actuators installed in the field. HARTING offers a portfolio of circular connectors with M8, M12, M 23, 7/8" thread and Han-Max® which are attuned to meet the requirements of industrial applications. In addition to the ready-to-use system cables, HARTING offers connectors equipped with *HARAX*® quick connection technology for in situ field assembly.

In addition, HARTING is continuing the development of enhanced circular connectors for new applications. HARTING is offering the M12 connector for the electrical and optical cabling for Fast Ethernet applications.

### *Application profile:*

Application profile:											
Connection type		Environment		Application							
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	high performance				
							Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current	
Cable termination				PCB termination				Application standard			
Han-Quick Lock®	IDC HARAX®	Crimp		THT	SMC	SMT		DeviceNet	EtherNet/IP	PROFINET	CANopen
											
Screw	Cage clamp	Axial screw		Press-in				ETHERNET POWERLINK			
											
Housing integration				Separate housing	Integrated housing

## 03. Circular Connectors

Standardized circular connectors with M8, M12, M 23, 7/8" thread and Han-Max® are in widespread use in the installation of machines and systems.

HARTING offers a portfolio of angled and straight M8, M12, Han® R 23 and 7/8" connectors which are attuned to meet all relevant automation requirements. The housings are available as plastic and as metal variant. In addition to the standard circular connectors for sensors/actuators, HARTING is offering standardized circular connectors such as the M12 and Han-Max® variants to meet the special requirements of communication technology (Ethernet, Ethernet/IP, PROFINET, PROFIBUS, Devicenet and CAN).

The HARTING product range comprises connectors, ready-to-use patch cables and corresponding accessories.

The easy-to-handle HARAX® quick connection technology is available for the in situ assembly of M8 and M12 connectors and does not require the use of special tools. The portfolio of circular connectors is rounded off by the Han® R 23 connector family. HARTING's comprehensive and user-friendly circular connector range enables cost-effective and quick realization of all wiring and communication tasks in automation projects.

### APPLIANCE INTEGRATION:

In order to support the implementation of appliances with degree of protection IP65 / IP67, HARTING offers panel feed-through devices with ready-to-use patch cables and female contact modules for direct mounting on PCBs.

## QUICK CONNECTION WITH HARAX®:

The HARTING HARAX® quick connection technology is an ideal solution for the in situ assembly of M8/M12 connectors. Users only have to strip the cable insulation, insert the conductors, and screw the connector together in order to produce a gas-proof and vibration resistant connection. HARAX® is a universal technology deployed in diverse connector series to wire data, signal and power lines and represents the current standard connection for Fieldbus and Fast Ethernet.

## ASSEMBLED SYSTEM CABLES:

HARTING offers a comprehensive range of ready-to-use M8/M12 system cables for the quick wiring of sensors and actuators. HARTING also offers ready-to-use and tested system cables for special Ethernet communication such as PROFINET and Ethernet/IP. HARTING also provides custom patch cables which are also available as overmoulded versions. The range of solutions comprises shielded and non-shielded cables with diverse structures, as required in drag chain applications, for example.

## M12 FEMALE SOCKETS FOR PCB MOUNTING:

Straight and angled contact inserts are available for direct soldering on PCBs. HARTING has developed special shielded contact inserts category 5 to ISO/IEC 11801 for Ethernet technology which meet the stringent requirements for railway applications.

## Technical characteristics M8

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5.

## Technical characteristics M12 – A-coding

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5.

M12-S, 4 poles    1 = Wire gauge 0.25 mm<sup>2</sup>  
                           2 = Wire gauge 0.34 mm<sup>2</sup>

## Applications / Advantages

- Actor and sensor applications
- Shielded and unshielded versions
- Available with crimp resp. HARAX® rapid termination, or as overmoulded system cable in various lengths
- Robust design, quick assembly

**Specifications** IEC 60352-4

**Approval**

Mating face

B-coding  
Mating face  
acc. to IEC 61076-2-101

## Technical characteristics M12 – B-coding

Type M12 B-coded	HARAX® M12 L shielded	M12 Crimp
------------------	-----------------------	-----------

### General data

Conductor cross section	0.25 - 0.34 mm <sup>2</sup> AWG 24-22	0.13 - 0.75 mm <sup>2</sup> AWG 26-18
Diameter of individual strands	≥ 0.1 mm	X
Conductor insulation material	PVC, Zell-PE	X
Conductor diameter	2 - 2.6 mm	2.0 - 2.3 mm
Cable diameter	7.0 - 8.8 mm	4 poles: 4.5 - 8.8 mm 5 poles: 4.5 - 8.8 mm
Temperature range	-40 °C ... +85 °C	-40 °C ... +85 °C
Temperature during connection	-5 °C ... +50 °C	-5 °C ... +50 °C
Degree of protection	IP65 / 67	IP67
Mating cycles	100	500
Tightening torque connector / hexagonal wrench	0.6 Nm / SW 17	0.5 Nm / SW 17

### Electrical characteristics

Rated current	4 A	4 A
Rated voltage	32 V	250 V
Rated impulse voltage	1.5 kV	1.5 kV
Contact resistance	10 mΩ	10 mΩ
Insulation resistance	10 <sup>8</sup> Ω	10 <sup>8</sup> Ω
Pollution degree	3	3
Overvoltage category	3	3
Isolation group	1	1

### Materials

Contact material	Brass	Brass
Contact plating	Gold	Gold
Contact carrier material	PA unreinforced	PA
Housing material	PA unreinforced	PA

## Technical characteristics M12 – B-coding

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5.

**Circular  
Connectors**

M12-L

3 poles, 4 poles

1 = Wire gauge 0.34 mm<sup>2</sup>

2 = Wire gauge 0.75 mm<sup>2</sup>

## M12, Crimp

1 = Wire gauge 0.34 mm<sup>2</sup> /  
0.5 mm<sup>2</sup>

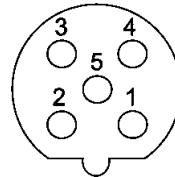

## Applications / Advantages

- B-coding for field bus systems e.g. Profibus, DeviceNet or CANopen
- Available with crimp resp. HARAX® rapid termination, or as overmoulded system cable in various lengths
- Shielding by the hood
- Easy handling, quick assembly

Identification	Part number	Drawing	Dimensions in mm

# M12 PCB adapter B-coded

## Technical characteristics: M12 PCB adapter

Degree of protection	IP20, IP67 (mated and locked)	Temperature during connection	-5 °C ... +50 °C
Rated current	max. 4 A (dependant on PCB layout)	Termination	PIH
Rated voltage	50 V	Contact material	Copper alloy
Mating cycles	max. 100	Contact plating (mating side)	Au over Ni
Limiting temperature	-40 °C ... +85 °C	Insulator material	PA

Identification	Part number	Drawing	Dimensions in mm
M12 PCB adapter Male, B-coding, straight  	5 poles, IP20  21 03 341 1505

Mating cycles	100	500	250
Tightening torque connector / Hexagonal wrench	0.6 Nm / SW 17	0.6 Nm / SW 17	0.6 Nm / SW 17

### Electrical characteristics

Rated current	4 A	4 A	1 A
Rated voltage	50 V	250 V	48 V
Rated impulse voltage	1.5 kV	1.5 kV	1.5 kV
Contact resistance	10 mΩ	10 mΩ	10 mΩ
Insulation resistance	10 <sup>8</sup> Ω	10 <sup>8</sup> Ω	10 <sup>8</sup> Ω
Pollution degree	3	3	3
Oversupply category	3	3	3
Isolation group	1	1	-
Transmission performance (Category)	Cat. 5	Cat. 5	Cat. 5

### Materials

Contact material	Brass	Brass	Brass
Contact plating	Gold	Gold	Gold
Contact carrier material	PA unreinforced	PA	-
Housing material	PA unreinforced	PA	Zinc die-cast

## Technical characteristics M12 – D-coding

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5.

M12-L

3 poles, 4 poles

1 = Wire gauge 0.34 mm<sup>2</sup>  
2 = Wire gauge 0.75 mm<sup>2</sup>

## Technical characteristics M12 – X-coding

Type M12 X-coded	har-speed M12 har-speed M12 Slim design
------------------	--

### General data

Conductor cross section	0.08 - 0.25 mm <sup>2</sup> AWG 28-23
Diameter of individual strands	–
Conductor insulation material	–
Conductor diameter	0.33 - 0.61 mm
Cable diameter	5.7 - 8.8 mm
Temperature range	-40 °C ... +85 °C
Temperature during connection	-5 °C ... +50 °C
Degree of protection	IP65 / 67
Mating cycles	500
Tightening torque connector / hexagonal wrench	0.6 Nm / SW 15

### Electrical characteristics

Rated current	0.5 A
Rated voltage	48 V
Rated impulse voltage	0.8 kV
Contact resistance	15 mΩ
Insulation resistance	10 <sup>8</sup> Ω
Pollution degree	3
Oversupply category	3
Isolation group	1
Transmission performance (Category)	Cat. 6A

### Materials

Contact material	Brass
Contact plating	Gold
Contact carrier material	LCP
Housing material	ZP410

## Technical characteristics M12 – X-coding

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-9-1.

har-speed M12  
8 poles

har-speed M12  
PCB adapter

## Applications / Advantages

- High-Speed Ethernet applications for process automatization, e.g. camera system for process control in the production
- Maximum data rates through the configuration of the contacts in conformance with Ethernet technology. Transfer class E<sub>A</sub> for 1 and 10 Gigabit
- Perfect shielding through paired shielding of the contacts
- Overmoulded system cables in various lengths

Identification	Part number	Drawing	Dimensions in mm

Ha-VIS preLink® M12 connector  
X-coding

## Advantages

- M12 Ethernet-Data connector suitable for industry
- Robust design
- 360° shielding
- Category of transmission Cat. 6A
- Suitable for solid and stranded wires
- Suitable for PoE (IEEE 802.3af) and PoE+ (IEEE 802.3at)

## Technical characteristics

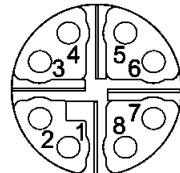

Connector type	M12 X-coding acc. to IEC 61 076-2-101
Number of contacts	8
Transmission category	Category 6A, Class EA, suitable for 1/10 Gigabit Ethernet
Transmission performance	Category 6A / Class EA up to 500 MHz acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	fully shielded, 360° shielding contact
Mounting	IDC termination
Cable termination for preLink® terminal module, yellow, 20 82 000 0001	
Connectable cables	
– Conductor cross section	AWG 23 ... AWG 22 (solid and stranded)
– Conductor diameter	1.3 ... 1.6 mm
Cable termination for preLink® terminal module, white, 20 82 000 0003	
Connectable cables	
– Conductor cross section	AWG 27 ... AWG 26 (solid and stranded)
– Conductor diameter	0.8 ... 1.1 mm
Cable diameter	5 ... 9 mm
Degree of protection	IP65 / IP67
Mating cycles	min. 750
Temperature range	-40 °C ... +70 °C
Housing material	Zinc die-cast, nickel-plated

## Technical characteristics M12 INOX

**Current carrying capacity** The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interruptet current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5.

M12-L  
4 poles

1 = Wire gauge 0.34 mm<sup>2</sup>  
2 = Wire gauge 0.75 mm<sup>2</sup>

M12, Crimp 1 = Wire gauge 0.34 mm<sup>2</sup> / 0.5 mm<sup>2</sup>

The graph shows the relationship between ambient temperature and rated current. The x-axis represents ambient temperature in degrees Celsius, ranging from 20 to 90. The y-axis represents rated current in Amperes, ranging from 0 to 11. A smooth curve starts at approximately (20, 8), passes through (40, 6.5), and ends at (90, 0). A point labeled P is plotted on the curve at an ambient temperature of 40°C.

Ambient temperature [°C]	Rated current [A]
20	8.0
30	7.0
40	6.5
50	5.5
60	4.5
70	3.5
80	1.5
90	0.0

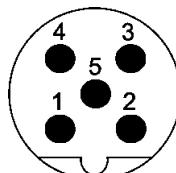

## Applications / Advantages

- Designed for rough outdoor applications in harsh environments
- Material V4A
- Available with crimp resp. HARAX® rapid termination
- Extreme robust design, quick assembly

## 04. Industrial Connector Han®

Han® industrial connectors with degree of protection IP65 / IP67 represent the worldwide standard for safe installation, quick commissioning and easy servicing of machines and plants.

The use of Han® connectors enables efficient and cost-effective modular structures of machines and plants.

The outstanding properties of Han® connectors are reflected by their versatility, application bandwidth and ruggedness. The advantages of the Han® connector family that users know from installation tasks are also available for direct device connections. The Han® connectors support the installation of automation systems in control cabinets and of IP65 / IP67 distributed devices using identical connectors. Key user benefits: Investment and operational security.

## 04. Industrial Connector Han®

Han® connectors with degree of protection IP65 / IP67 are established as the worldwide standard for industrial connectors. This standard connector can also be used directly as appliance connector.

The rugged housings are equipped with secure interlock mechanisms that protect the contact inserts from external negative influences such as dust, dampness and mechanical stress. On the appliance side, the connector contacts are routed in the bulkhead mount module, soldered directly onto the PCB and are aligned precisely to the bulkhead frame. This results in appliance connections that are resistant to any environmental stress. The Han® appliance connectors offer comprehensive solutions based on connector inserts for data, signal and power lines up to 32 A per contact. The Han® 3 A housing can be equipped for

communication applications with copper-bound RJ45 modules, 4-pole (Cat. 5) and 8-pole (Cat. 6) and optical LC modules. The power contact inserts are available for the Han® 3 A, Han® Compact and Han® B housing variants. The cables can be wired to the contact inserts by way of crimp, screw or cage clamp terminals, or using the patented Quick-Lock® quick connection technology for on-site assembly.

HARTING highlights its Han® 3 A appliance connector series with versatile hybrid contact inserts for wiring data and power lines using a single connector and cable. This functionality results in a reduction of insertion points and cabling by more than 50%. Han® connectors with high degree of protection can be used for wiring appliances, terminal boxes and control cabinets.

## Han® APPLIANCE CONNECTORS:

The PCB-Adapter of HARTING can be used to convert Han® industrial connectors into fully-fledged PCB connectors. The modular PCB adapters enable the implementation of various Han® contact inserts.

The PCB Adapter concept:

- The PCB adapter is processed as component in a standard soldering process and is a fixed part of the PCB.
- The contact insert of the Han® industrial connector is simply plugged in after the soldering process has been completed.
- The bulkhead mount housing with the bracket interlock is mounted to the appliance housing.

This modularity guarantees the availability of a wide range of contact inserts and connector housings for the assembly of a multitude of rugged IP65 / IP67 appliance connectors for data, signal and power lines.

## SCALABLE HYBRID APPLIANCE CONNECTION USING

### Han® CONNECTORS:

The hybrid appliance connector series enable the cost-effective combination of Fieldbus/Ethernet communication and power supply lines in a single cable and connector.

The contact insert combination for communication and for the power supply to the appliance is soldered directly to the PCB. The bulkhead mount housing can be adapted directly to the housing shape, or be mounted as separate unit to the appliance housing. HARTING offers cable solutions for smaller batches which can be used to connect the contact insert to the PCB.

Key user benefits: A tailored appliance connection is always available for small- and large-scale appliance series.

Han® 3 A RJ45 10G Cat. 6 – panel feed-throughs

## Advantages

- Compact and robust design
  - 360° shielding
  - Easy mounting
  - Transmission category 6, performance class E<sub>A</sub>, suitable for 1/10 Gigabit Ethernet
  - RJ45 mating compatible
  - Coding (4 variants) possible

## Technical characteristics

Number of ports	2 / 1x Han® 3 A RJ45 (IP65 / IP67) 1x RJ45 (IP20)
Transmission performance	Category 6 / class E <sub>A</sub> acc. to ISO/IEC 11 801:2002, EN 50 173-1
Transmission rate	10/100 Mbit/s and 1/10 Gbit/s
Shielding	Fully shielded, 360° shielding contact
Mounting	Screwable to cover plates
Degree of protection	IP65 / IP67
Mating cycles	min. 500
Temperature range	-40 °C ... + 70 °C
Housing material	
Plastic version	Polycarbonate, black, UL 94 V0
Metal version	Zinc die-cast, powder-coated

Identification	Part number	Drawing	Dimensions in mm
Panel feed-through set, 8-poles			
Plastic version, black	09 45 225 1560		
Metal version Standard, grey	09 45 215 1560

Metal version Standard, grey, with self-closing protective cap	09 45 215 1562		
Han® 3 A RJ45 10G insert Cat. 6 (for Han® 3 A housings)	09 45 200 1560		
Han® 3 A RJ45 HIFF adapter  to mount HIFF inserts (e.g. HARTING RJ Industrial® 10G RJ45 bulkhead or Ha-VIS preLink® RJ45) in Han® 3 A housings	09 45 515 0024		

Han® 3 A connector RJ45, 4-poles, Cat. 5

## Advantages

- RJ45 Ethernet-Data connector suitable for industry
- Tool-less field-assembly with *HARAX*® rapid termination in IDC technology
- Category of transmission Cat. 5
- Compact design and very robust housing
- Suitable for termination of solid and stranded cables
- Up to 10 x reconductable
- PROFINET compatible
- Min. 500 mating cycles

## Technical characteristics

Connector type	Han® 3 A Connector RJ45 acc. to IEC 61076-3-106 variant 5
Number of contacts	4
Transmission performance	Category 5 / Class D up to 100 MHz acc. to ISO/IEC 11801:2002, EN 50173-1
Transmission rate	10/100 Mbit/s
Shielding	fully shielded, 360° shielding contact
Cable termination	tool-less with IDC contacts
Conductor cross section stranded solid	AWG 24/7 - AWG 22/7 AWG 23/1 - AWG 22/1
Conductor diameter	max. 1.6 mm
Cable outer diameter	6.5 mm – 9.5 mm
Degree of protection	IP65 / IP67
Temperature range	-40 °C ... +70 °C

Han® 3 A RJ45 Hybrid

## Advantages

- RJ45 Ethernet-Data connector suitable for industry with Power contacts for hybrid applications
- Field-assembly with mounting tool
- Category of transmission Cat. 5
- Compact design and very robust housing
- Suitable for termination with solid and stranded cables
- Protection against direct contact on cable and device side according to EN 60 529

### Reference note:

For cat. 6 patch cords it is recommended to use 1 connector with a white cable manager and one with a blue cable manager, in order to optimise the crosstalk between different signal pairs.

## Technical characteristics

Degree of protection	IP65 / IP67

## Han® 3 A RJ45, Hybrid

### General information

With the RJ Industrial Hybrid connector, HARTING has developed an interface solution that integrates the data lines and the power supply into one connector for hybrid Ethernet networks. The connector's geometry nevertheless maintains a clear separation between the data and the power contacts. This brings a significant reduction in the costs of installation and of field devices suitable for industrial application with hybrid cabling.

The panel feed-through is compatible with RJ45 connectors, which means that the standard patch cables for service and test purposes can be used. The data lines are connected at the rear via an RJ45 jack, while the power lines use a cage clamp terminal.

Optional the hybrid interface can be integrated in the device directly, thus preventing the use of rear side data lines.

The four power contacts of the hybrid module have also been designed with HARAX® rapid termination technology, allowing stranded cables of up to 1.5 mm<sup>2</sup> to be connected.

Current carrying capacity „Power contacts“

### Technical characteristics

Connector	IP65 / IP67
Degree of protection	IP65 / IP67
Mating interface	RJ45, 4-poles acc. to IEC 60603-7 plus 4x power
Temperature range	-40 °C ... +70 °C
Housing material	UL 94 V0, black
Plastic version	Zinc die-cast, grey
Metal version	min. 500
Mating cycles	field-assembly
Mounting	
Data Cat. 5, 4-poles	
Transmission performance	Category 5 / Class D up to 100 MHz acc. to ISO/IEC 11801:2002, prEN 50173-1
Transmission rate	10/100 Mbit/s
Cable diameter	
stranded	AWG 24/7 - AWG 22/7
solid	AWG 23/1 - AWG 22/1
Data Cat. 6, 8-poles	
Transmission performance	Category 6 / Class E <sub>A</sub> up to 500 MHz acc. to ISO/IEC 11801:2002, prEN 50173-1
Transmission rate	10/100 Mbit/s / 1 Gbit/s
Cable diameter	
stranded / solid	AWG 27 - AWG 22
Both, data Cat. 5 and Cat. 6	
Shielding	fully shielded, 360° shielding contact
Cable outer diameter	10.0 mm – 11.0 mm
Power	
Number of contacts	4 for cable diameter 1.5 mm <sup>2</sup> stranded
Working voltage	48 V
Working current	16 A, see current carrying capacity
	UL approved (E102079)
Panel feed-through	
Mating interface extern:	RJ45 female acc. to IEC 60603-7 plus 4 x power
Mating interface intern:	RJ45 female acc. to IEC 60603-7 4 x power via cable cage clamp 1.5 mm <sup>2</sup>

## Features

### General Description

The Han-Brid® series allows the connection of a data interface and a power supply in a single space saving connector. This means that it is now possible to provide data transmission and power to devices in a single bus structure. This hybrid connector family includes provision for connection of a max. 50 V, 10 A power supply together with a range of inserts for connection of a variety of data protocols and transmission medias:

- Han-Brid® F.O. for plastic (POF) or for HCS®\* optical fibre
- Han-Brid® Cu for shielded twisted pair.
- Han-Brid® Quintax 3 A for shielded 4 wire bus systems (2 pair STP)
- Han-Brid® RJ45 C for Ethernet application
- Han-Brid® USB / Firewire for fast data transmission

Han-Brid® inserts fit to the standard plastic as well as metal hoods and housings with seal of the Han® 3A series offering a degree of protection IP65 according to DIN EN 60 529. For harsher environments Han® 3 HPR hoods and housings with a degree of protection of IP68 can be used.

### Power supply

- Han D® male and female with standard crimp contacts
- Rated current 10 A
- Rated voltage 50 V
- Wire gauge 0.14 - 2.5 mm<sup>2</sup>
- Approval 

## Data interfaces

### Han-Brid® F.O.

- Is suitable for all HP Versatile Link (Horizontal Package) transmitters and receivers
- Data rates: Standard 12 Mbit/s, suitable for all common fieldbus systems
- Insert allows integration of HP standard contacts for POF and HCS®\* fibres
- Temperature range -40 °C ... +70 °C

### Han-Brid® Cu

- For termination of a shielded twisted pair
- Insert for 2x Han D® male or female contacts
- Connection of the shield by means of shielding plate and fixing clamps
- Connection of the device side can be realized either by a printed circuit board as a modular version or as part of the appliance PCB
- Insert for bulkhead mounted housing or the coupling housing are always equipped with a screening spring

### Bus Terminator

- Active bus terminator in male and female version
- Standard Han® 3 A hoods and housings
- Power supply to the termination network via electrical contacts of Han-Brid®
- Integrated, galvanically separated DC/DC converter 24 V / 5 V

### Han-Brid® Quintax 3 A

- Possibility to terminate shielded 4 wires conductors (2 pair STP)
- Suitable for all 4-wire bus systems
- Suitable for shielded cable conductor diameter 3 – 9.5 mm
- Transmission of shielding separately from the hood's ground
- Connections are carried out acc. to DIN EN 50173, Cat. 5
- Temperature range -40 °C ... +70 °C

### Han-Brid® RJ45 C

- Suitable for standard RJ45 Plug and Jack, shielded version
- Connections provided for conductors acc. to DIN EN 50173, Cat. 5
- Termination from the device side is carried out via a PCB, two versions are possible: modular version or as part of the appliance PCB
- Assembly with standard tools
- Insert for 2 Han-D® male or female contacts offers the combination with electrical bus connector
- Rated current 10 A
- Rated voltage 24 V
- Wire gauge 0.14 - 2.5 mm<sup>2</sup>

### Han-Brid® USB

- Insert for all Han® 3 A hoods and housings
- Hood with glued sealing
- Simple and low-cost termination via insert of a patch cable
- Strain-relief via cable tie

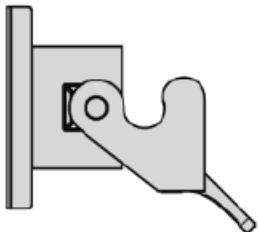

### Han-Brid® FireWire

- Insert for all Han® 3 A hoods and housings
- Hood with glued sealing
- Simple and low-cost termination via insert of a patch cable
- Strain-relief via cable tie
- Compatible to IEEE 1394

Quintax insert				
Quintax contacts Zinc alloy Order crimp contacts separately	09 15 003 3001	09 15 003 3101	 	 
Special clamp for cable diameter 3 - 6 and 6 - 9.5 mm included in delivery range				

## Assembly instructions

### Quintax-Z-contact

1. Strip cable acc. to drawing 1 and fold the shielding over the cable.
2. Crimp Han D® contacts onto the wires.

3. Insert Han D® contacts into corresponding cavities of insulator until they are snapped in.

4. Fit the insert including the cable into the opened shielded bushing. The coding pin of the shielded bushing has to meet the groove of the insulator.

5. Clamp the tilt over the shielding onto the cable by means of the special clamp (small opening for cable diameter of 3 - 6 mm, large opening for cable diameter of 6 - 9.5 mm).

6. Check the wiring.

7. Close the shielded bushing with the cover and insert it into the corresponding cavity of the Quintax Module as usual.

## Han-Brid® USB

### Features

- Insert for all Han® 3 A hoods and housings
- Hood with glued sealing
- Simple and low-cost termination via insert of a patch cable
- Strain-relief via cable tie

## Han-Brid® FireWire

### Features

- Insert for all Han® 3 A hoods and housings
- Hood with glued sealing
- Simple and low-cost termination via insert of a patch cable
- Strain-relief via cable tie
- Compatible to IEEE 1394

### Technical characteristics

USB style A, 2.0 Standard

Specifications	DIN VDE 0110 DIN EN 61984
Number of contacts	4
Electrical data acc. to EN 61984	<b>1 A    50 V    0.8 kV 3</b>
Rated current	1 A
Rated voltage	50 V
Rated impulse voltage	0.8 kV
Pollution degree	3
Material	Polycarbonate
Insulation resistance	$\geq 10^{10} \Omega$
Contact resistance	$\geq 4 \text{ m}\Omega$
Temperature range	-40 °C ... 85 °C
Flammability acc. to UL 94	V0
Mechanical working life - mating cycles	$\geq 500$

## Assembly situation

<sup>1)</sup> for Han® B EMC hoods/housings spacing of  $12.5 \pm 0.7$  is necessary as no flange seal is used

- Secondary mating between industrial connector and printed circuit board.
- No higher force is applied on the soldering joint when mating the industrial connector due to an additional mating point.
- No wiring between printed circuit board and industrial connector necessary.
- thus no wiring faults  
⇒ no testing, no costs
- Connecting times are minimized.
- Easy handling is time and cost saving.
- The production of mechanical and electrical / electronical components can be completely separated.
- Possibility to reach a higher degree of automation in the production (i. e. wave soldering of the PCBs).

## 05. Subminiature D Connectors

D-Sub connectors are an Industry Standard for cable-to-board connectivity applications. Thanks to the large variety of solutions it offers, it can be universally used as a device interface. Our customers manufacturing requirements are addressed by the comprehensive range of PCB termination styles available. It is particularly suited to configuring communication and data interfaces and is the standard for many fieldbus profiles. Solutions for the cable connector that can be easily assembled in the field are available for automation applications.

### Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION			high performance			
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current
<b>Cable termination</b>				<b>PCB termination</b>				<b>Application standard</b>		
<i>Han-Quick Lock®</i>	<i>IDC</i>	<i>Crimp</i>		<i>THT</i>	<i>SMC</i>	<i>SMT</i>				
<i>Screw</i>	<i>Cage clamp</i>	<i>Axial screw</i>		<i>Press-in</i>						
<b>Housing integration</b>				<i>Separate housing</i>		<i>Integrated housing</i>

## 05. Subminiature D Connectors

In the automation industry, the Subminiature D connectors are the standard interfaces for data, signal and service/programmer interfaces. The extensive HARTING product range allows the set up of all Subminiature D interfaces common in the industry, such as for field buses (PROFIBUS, CanOpen and DeviceNet), while the connectors are also available in optional plastic and metal housings with IP20 and IP65 / IP 67 protection.

In addition to the comprehensive range of Standard connectors with 9 to 50 straight, right-angled or US foot print style contacts, HARTING offers other product ranges which extend the application field of Subminiature D connectors considerably.

Depending on the product family, various termination techniques can be supplied such as press-in, solder, SMC or SMT to match the customer's termination process.

In addition, a wide range of hoods and accessories complete the cable connector range to fulfil all kinds of requirements such as EMC, IP65 / IP67 etc.

For the cabling HARTING provides cable assemblies for standard applications like fieldbus, cable or customized solutions.

## D-SUB – MIXED CONNECTORS

with nearly 20 different contact arrangements offering versatile options for mixing power, coaxial, high voltage, signal and even pneumatic contacts in one connector.

D-Sub

## D-SUB – WATERPROOF

IP65 / IP67 connectors with 9 to 50 contacts for panel mount to PCB or cable.

## D-SUB – FILTER CONNECTORS

with 9 to 37 contacts and integrated, different filter designs, like C, L or Pi types.

## D-SUB – HIGH DENSITY CONNECTORS

with 15 to 78 straight and right-angled contacts, exceeding the contact capacity of the standard Subminiature D connectors by 70 %.

Number of contacts	9, 15, 25, 37, 50 UL recognized	Current carrying capacity The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature. Control and test procedures according to DIN IEC 60512.
Working current see current carrying capacity chart	Turned contacts 7.5 A max. Stamped contacts 6.5 A max.	
Test voltage U <sub>r.m.s.</sub>	1 kV	
Clearance and creepage	≥ 1.0 mm	
Contact resistance Insulation resistance	≤ 10 mΩ ≥ 10 <sup>10</sup> Ω	
Temperature range	-55 °C ... +125 °C The higher temperature limit includes the local ambient and heating effect of the contacts under load	 <p>Example: 25 way connector  ① Turned contacts  ② Stamped contacts</p>
Terminations	a) Solder pins Ø 0.6 mm for P.C.B. holes Ø 0.8/1 mm b) Solder pins, angled 90° Ø 0.6 mm for P.C.B. holes Ø 1 mm	
Materials	Mouldings and hoods Thermoplastic resin, glass-fibre filled (PBTP), UL 94-V0	
Contacts	Copper alloy	
Contact surface	Contact zone selectively plated according to performance level <sup>1)</sup>	
Metal shell	Plated steel	
Insertion and withdrawal force Connector on P.C.B.	Solder, straight with clips – insertion max. per connector: 60 N – withdrawal min. per connector: 10 N	
Mating force	9 way ≤ 30 N 15 way ≤ 50 N 25 way ≤ 83 N 37 way ≤ 123 N 50 way ≤ 167 N	

<sup>1)</sup> Performance level 3, 50 mating cycles, no gas test

Performance level 2 as per CECC 75301-802, 250 mating cycles, 4 days 4 mixed gas test – IEC 60512

Performance level 1 as per CECC 75301-802, 500 mating cycles, 10 days 4 mixed gas test – IEC 60512

Standard Versions  
pages 05.12 – 05.17

U.S. Footprint Versions  
pages 05.22 – 05.23

Front panel width

5 TE

5 x 5.08 mm

Integrated mounting bracket

## Advantages

All-round protective metal shell

- Polarisation
- Contact protection
- Plated shell
- Male connector with dimples

Plated terminations for increased solderability

Grounding contact riveted to metal shell

Integrated plastic mounting bracket

Mounting bracket

Contact surface finish to different performance levels

Panel

Different metal threads possible in flange area

- M3
- 4-40 UNC
- fitted female screw locks 4-40 UNC
- max. torque  $\leq 0.8$  Nm

Mounting bracket with snap-in-clips and grounding pin

## Mounting height

### Low-Profile Versions

The reduced mounting height of these connectors allow them to be used on the same PCB as DIN 41612

9-37 way connectors with 3.6 mm mounting height can be fitted to front panels of 3 TE (15.24 mm) width.

types with no loss of packaging density when card frames to DIN 41494 are used.

50 way connectors with 6.2 mm mounting height can be fitted to front panels of 4 TE (20.32 mm) width.

### Standard Versions

### US Footprint

9-37 way connectors with 7.3 mm mounting height can be fitted to front panels of 4 TE (20.32 mm) width.

50 way connectors with 8.7 mm mounting height can be fitted to front panels of 5 TE (25.4 mm) width.

**Standard Versions**

Mounting height 7.3 mm

9-37 way  
for front panel  
4 units of width (TE)

Mounting height 8.7 mm

50 way  
for front panel  
5 units of width (TE)

for connectors see pages 05.12 – 05.17

**Low-Profile Versions**

Mounting height 3.6 mm

9-37 way  
for front panel  
3 units of width (TE)

Mounting height 6.2 mm

50 way  
for front panel  
4 units of width (TE)

for connectors see pages 05.18 – 05.21

When used in a wave soldering process  
the mating face of  
the connector must  
be protected with  
adhesive tape.

**U.S. Footprint Versions**

Mounting height 6.3 mm

9-37 way  
for front panel  
4 units of width (TE)

for connectors see pages 05.22 – 05.23

Panel cut out  
for front/rear mountValues are taken from the  
CECC 75301-802

Materials	Mouldings and hoods Thermoplastic resin, glass-fibre filled (PBTP), UL 94-V0
Contacts	Copper alloy
Contact surface Contact zone	selectively plated according to performance level <sup>1)</sup>
Metal shell	Plated steel
Mating force	9 way ≤ 30 N 15 way ≤ 50 N 25 way ≤ 83 N 37 way ≤ 123 N 50 way ≤ 167 N

## Current carrying capacity

The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512.

Example: 25 way connector

- ① Turned contacts
- ② Stamped contacts
- ③ Insulation displacement contacts

## Contact arrangement View from termination side

HARTING's mixed D-Sub range brings the advantage of an industry standard I/O inter-connect product with the possibility to customise for any application.

The range is designed around **the standard D-Sub shell sizes** with **the possibility to have a blend of contacts** such as signals with coaxial, power, high voltage or pneumatic contacts. Due to its construction, the product is **fully shielded** and helps reducing the EMI/RFI leakage.

All contacts are machined with two different platings.

When hot plug-in is required, **first mate last break** contacts can also be supplied.

For connectors to be fitted on a board with SMT components, they can be supplied in an **SMC (PiHIR) version** which is assembled in the reflow solder process, thus reducing assembly cost.

In addition, a complete range of accessories such as clinch nut, spacers, board locks, female screw lock, etc. are available. For **blind mating feature**, a specific high performance solution has been developed based on the combination of a floating plate and guiding pins providing up to 2.2 mm realignment capability. With all these accessories, the requirements of most applications are achievable and it makes this product range very attractive thanks to its versatility, reliability and cost effectiveness.

This blind mating concept is also achievable on the standard D as shown on the photo.

# D-Sub

## Contact arrangements

The table shows the standard range supported by HARTING. Two versions are special since they allow to mix in the same shell male and female contacts: 2W2C and 3W3C. The purpose of these versions is to have a 100 % mating proof feature (the insulator shape prevents a 180° reversed mating).

The structure of the connectors' identification is so that the left side digits give the total number of contacts and the right side digits the number of special contacts which can be either power, coaxial or high voltage style.  
Example: 13W3 stands for 13 contacts in total with 10 signal contacts and 3 special contacts.

	Shell size

<b>43W2</b>	5	

Note:  
for any other layout please consult your HARTING representative.

## Connectors for pcb applications – general information

The range of pcb connectors available at HARTING is summarised in the table under. For each of the basic connector versions, the available contact styles are documented with termination process, pitch, plating, rating for power contacts and impedance for coaxial contact etc..., as well as the accessory configuration.

**Pcb connectors are delivered fully loaded** thus providing a very good positioning of the contacts in their cavities for an easy and safe insertion of the pins in the pcb holes particularly crucial in the right angled versions.

Due to the numerous possibilities offered with the pcb connectors, suggested method is to contact your local HARTING representative to determine the part number to order; see customer request form on pages 05.88 and 05.89.

<sup>1)</sup> Coaxial contacts are provided in two versions:

- Inner conductor soldered and outer part crimped (solder/crimp termination)
- Both inner and outer part crimped (crimp/crimp termination); this version is recommended for medium or large size volume since crimping is faster than soldering.

Number of contacts	2, 3, 5, 7, 8, 9, 11, 13, 17, 21, 24, 25, 27, 36, 43	
Approvals	DIN 41652, part 1	
Working current	5 A for signal contacts	
Temperature range The higher temperature limit includes the ambient and heating effect of the contacts under load	-55 °C ... +125 °C	
Materials Mouldings	Thermoplastic resin, glass-fibre filled (Polyester) UL 94-V0 color: green for standard black for crimp	
Metal shell	Tin plated steel	

Number of contacts

7-27

Dimensions in mm

## Board drillings for connectors with straight pcb contacts

## Pcb hole patterns

In the next pages, the pcb hole pattern is given for the power and the coaxial contact per connector layout. In the case of the power contact, the drilling hole dimension is not mentioned; the table here under provides relevant information according to the current rating of the contact and its version.

## Power contact diameter and pcb related drilling diameter

	Straight connectors		Right angled connectors	
Rating	Pin Ø (mm)	Pcb drilling Ø (mm)	Pin Ø (mm)	Pcb drilling Ø (mm)

## Interference – Yesterdays problem!

In a fast developing technological environment the management of electromagnetic interference is becoming more challenging.

Therefore HARTING developed a range of filter solutions to help designers of electronic equipments to achieve the demanding goal of electromagnetic compatibility.

HARTING offers a wide range of solutions by the integration of a filter inside one of the most standard I/O ports on the market; the D-Sub.

From standard simple ferrite-filter solution to complex customized high performance filters, you will be able to find in the HARTING filter D-Sub range the adequate solution to protect your application from any introduction or radiation of noise through D-Sub port apertures.

## Advantages

Wide range:

- 9, 15, 25 and 37 contact versions
- Various terminations such as solder buckets, straight and right angled solder pins
- A large range of accessories
- High performance (C-filter) as well as simple, quick and cost effective solutions (ferrite-filter)

Compatible with standard wave and lead-free reflow soldering (C-filter)

Same layout and shell dimensions as standard D-Sub connectors, no modification of PCB design necessary

Elimination of ringing, crosstalk phenomenon thanks to specific multilayer PCB used in C-filter design.

Flexible filter structure allowing a wide range of customization:

- Filter value (even pin by pin approach)
- Pi-filter
- Dielectric withstanding and working voltage
- Specific ESD / lightning protection

## HARTINGs broad Filter range

*Ferrite block mounted directly on rear side of the D-Sub*

### Ferrite-filter

Ferrite-filter D-Subs providing a low level of filtering thanks to simple blocks of inductive ferrite attached to the back end of the connectors. Providing a few dB attenuation only at high frequencies HARTING ferrite-filter D-Subs represent a cost effective solution in applications where the emission level is close to the limit.

*4 layers PCB populated with SMT chip capacitors*

### C-filter

To address higher EMI disturbances HARTING propose a comprehensive range of C-filter D-Sub connectors. HARTING C-filter D-Sub integrates a patented 4 layer printed circuit board equipped with chip capacitors. This patented solution provides complete protection of the I/O port due to the filtering performance of the capacitors and the screening effect of the PCB. Further more the 4 layers PCB also limits the ability of interference to enter the equipment through the D-Sub aperture. Available in 4 standard filter values 47, 470, 1000 and 3900 pF HARTING C-filter D-Subs represent for all designers a smart filtering solution allowing replacement of a "defective" port by a filtered one without any change of the PCB design.

### Filter adapter

To support engineers in the diagnosis of EMI disturbances HARTING has developed, in addition to its filter series a range of male/female filter D-Sub adapters.

These back-to-back adapters can be used as testing tools and replaced later on in production directly by a filtered D-Sub connector.

Number of contacts	9, 15, 25, 37
Working current	7.5 A max.
Working voltage	250 V AC max.
Dielectric withstanding voltage	500 V AC for 1 minute
Contact resistance	$\leq 15 \text{ m}\Omega$
Insulation resistance	$\geq 1000 \text{ M}\Omega$
Temperature range	-55 °C ... +105 °C
Terminations	a) Solder buckets AWG 20 b) Solder pins for P.C.B. holes $\varnothing 1 \pm 0.05 \text{ mm}$ c) Solder pins, angled 90° for P.C.B. holes $\varnothing 1 \pm 0.05 \text{ mm}$
Materials	
Insulation	PBT, flame retardant acc. to UL 94-V0
Contacts	Copper alloy
Contact surface Performance level	Performance level 3, as per IEC 60807-2, IEC 60512-25-2
Metal shell	Steel (tin-plated)

### Contact arrangement View from termination side

M = Male connector  
F = Female connector

### Mating conditions as per CECC 75301

### Minimum insertion loss

Frequency [MHz]	Attenuation [dB]
1	0.5
10	1.0
50	2.5
100	3.0
500	3.5
1000	4.0

		Contact arrangement View from termination side
Number of contacts	9, 15, 25, 37	
Working current	7.5 A max. (connectors) 6.5 A max. (filter adapters)	
Working voltage	100 V max. for standard capacitance values – higher working voltages are available as specific.	
Dielectric withstand voltage	250 V DC max. – higher dielectric withstand voltages are available as specific (see page 05.112)	
Contact resistance	$\leq 10 \text{ m}\Omega$	
Insulation resistance	$\geq 1000 \text{ M}\Omega$	
Temperature range	-55 °C ... +125 °C (connectors) Heat deflection temperature limit according to DIN 53461: ... +255 °C  -20 °C ... +125 °C (filter adapters)	
Terminations	a) Solder buckets max. 0.8 mm <sup>2</sup> b) Solder pins Ø 0.6 mm for P.C.B. holes Ø 0.8/1 mm c) Solder pins, angled 90° Ø 0.6 mm for P.C.B. holes Ø 0.8/1 mm	
Materials		
Insulation	PCT, glass-fibre filled, flame retardant acc. to UL 94-V0 Colour: natural	
Contacts	Copper alloy Male and female contacts are turned	
Contact surface	Selectively plated according to performance level	
Contact zone		
Performance level	Performance level 2, as per CECC 75 301-802, 250 mating cycles, 4 days 4 mixed gas test – IEC 60 512	
Metal shell	Steel	

Pi filters are only available for male connectors

## Attenuation characteristics for standard capacitance values

## Min. insertion loss

Capacitance [pF] <sup>1)</sup>	Frequency [MHz]	Attenuation (in dB) vs. frequency [MHz]						
		1	5	10	50	100	500	1000
47							30	35
470				1	11	16	35	32
1000			1	3	12	24	38	30
3900		1	6	11	25	35	38	32

<sup>1)</sup> Capacitance tolerance = ± 20 % (For other capacitor values see pages 05.112 ff).

Measured in 50 Ω system according to MIL-STD-220, no load.

Working voltage: 100 V max. for standard capacitance values – higher working voltages are available as specific.

Dielectric withstand voltage: 250 V DC max. – higher dielectric withstand voltages are available as specific (see page 05.112)

### Panel mountings

For float mounting option please contact your local HARTING representative.

Dimensions in mm

## General information

With the innovative EMC platform approach, this enables customers to select their optimum filter requirements, contact per contact. Allowing not only to segregate the filtering per contact but also to mix the type of filter used. This is then cast in a single competitive product (in a standard D-Sub shell).

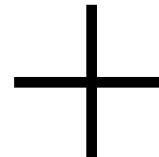

The biggest advantage of the HARTING technology is that multiple filter assemblies can be configured to create different filter designs: C, Pi, L and T types. Since any value of capacitor can be placed on any contact, a wide range of configurations can be built, it is even possible to have an individual pin unfiltered if necessary.

Furthermore, **Pi filters can be supplied in a standard connector size shell**. In addition, protection against lightening and transient voltage can be included upon request.

In the next few pages, you will find all the necessary information plus a selection guide to help you to choose your appropriate solution.

or

- C filter
- L filter
- Pi filter
- ESD protection
- Lightening protection
- Combination

With any capacitance on any pin in **a standard D-Sub shell**.

## General information

### Filter possibilities

#### C filter:

Non exhaustive list of C filter values that HARTING can supply (for specials see page 05.114 ff)

C filter capacitance in pF	Minimum insertion loss								Max. working voltage	Max. dielectric withstand		
	Attenuation [dB] vs frequency [MHz]											
	0.1	1	5	10	50	100	500	1000				
47							30	35	500 V DC	750 V DC		
100					1	3	40	35	500 V DC	750 V DC		
150					1	6	45	35	500 V DC	750 V DC		
180					1	10	40	32	500 V DC	750 V DC		
270				1	3	12	35	32	500 V DC	750 V DC		
330				1	7	13	35	32	500 V DC	750 V DC		
470				1	10	15	35	32	500 V DC	750 V DC		
820				2	10	18	30	30	500 V DC	750 V DC

#### Pi filter:

Non exhaustive list of Pi filter values that HARTING can supply (for specials see page 05.114 ff)

Pi filter capacitance in pF	Minimum insertion loss								Max. working voltage	Max. dielectric withstand		
	Attenuation [dB] vs frequency [MHz]											
	0.1	1	5	10	50	100	500	1000				
94						2	35	50	200 V DC	500 V DC		
200					1	8	50	40	200 V DC	500 V DC		
440				1	8	16	50	40	200 V DC	500 V DC		
940				2	12	24	50	40	200 V DC	500 V DC		
2000			2	7	17	40	45	40	200 V DC	500 V DC		
4400			5	10	28	60	45	40	200 V DC	500 V DC		
9400		2	10	15	48	50	45	40	200 V DC	500 V DC		
20000		5	14	20	50	60	52	48	100 V DC	250 V DC		
94000	2	15	32	50	51	52	48	42	50 V DC	125 V DC		
200000	7	21	48	65	55	52	48	42	16 V DC	25 V DC		

## General information

### Other protection possibilities

#### ESD protection

(Electro Static Discharge protection)

For equipment to comply with:

- IEC-1000-4-2; levels 1 to 4 (Contact discharge test)
- RTCA-160 D; section 25

Typical parasitic capacitance (pF)	Max. clamp voltage (V) @ I = 1 A @ 8/20 µS	Working voltage (V) @ I = 10 µA
0.5 V <sub>rms</sub> @ 1 KHz		
1750	7.5	3
1250	13	5
650	22	12
430	33	18
220	48	26
200	51	30

#### EMP protection

(Electro Magnetic Pulse protection)

For equipment to comply with:

- MIL-STD-461 C: requirements CS 06, CS 10, CS 11, RS 05
- IEC-1000-4-4; EFT TESTS
- RTCA-160 D; section 17

Typical parasitic capacitance (pF)	Max. clamp voltage (V) @ I = 10 A @ 8/20 µS	Working voltage (V) @ I = 10 µA
0.5 V <sub>rms</sub> @ 1 KHz		
5675	9	3
3620	15	5
1500	26	14
820	34	18
275	50	26

#### Lightening protection

For equipment to comply with:

- IEC-1000-4-5;  
levels 1 and 2 (1.2 µ / 50 µS)
- RTCA-160 D; section 22  
(pin injection, level 1)

Typical parasitic capacitance (pF)	Max. clamp voltage (V) @ I = 30 A @ 8/20 µS	Working voltage (V) @ I = 10 µA
0.5 V <sub>rms</sub> @ 1 KHz		
5500	12	3
3175	18	5
2000	21	9
1680	30	14
900	38	18
720	60	26
600	63	30

## HARTING customer request form

Our innovative technology offers all the possibilities you may need.

For customer solutions, please contact your local HARTING representative.

Here is a summary of the information we need to develop a customer solution:

### Connector

Standard D-Sub	Gender	<input type="checkbox"/> Male	<input type="checkbox"/> Female
	No. of contacts	<input type="checkbox"/> 9	<input type="checkbox"/> 15
	Termination	<input type="checkbox"/> Solder bucket	<input type="checkbox"/> Straight pcb
		<input type="checkbox"/> R/A Eur, 2.54 mm	<input type="checkbox"/> R/A US, 2.84 mm
Mixed D-Sub	Gender	<input type="checkbox"/> Male	<input type="checkbox"/> Female
	Contact arrangement	<input type="checkbox"/> 3W3	<input type="checkbox"/> 3W3C
	Power contact rating	<input type="checkbox"/> 10 A	<input type="checkbox"/> 20 A
	Termination	<input type="checkbox"/> Solder bucket	<input type="checkbox"/> Straight pcb
		<input type="checkbox"/> R/A pcb (please specify the board drillings)	

### Flange thread and board locking options

#### Right angled version

#### Straight version

Number of contacts	9, 15, 25, 37, 50 UL recognized
Working current	5 A
Test voltage	1200 V for 1 minute between 2 contacts / contact and shell
Clearance and creepage	$\geq 1.0 \text{ mm}$
Contact resistance	Straight contact $\leq 10 \text{ m}\Omega$ Angled contact $\leq 25 \text{ m}\Omega$ Angled contact 50-pole $\leq 35 \text{ m}\Omega$
Insulation resistance between contacts	$\geq 5000 \text{ M}\Omega$
Dielectric strength	50 kV/mm
Temperature range	-25 °C ... +70 °C
Protection	IP67 (per DIN 40 050 / IEC 529)
Termination	Solder cup Solder pin straight Solder pin angled
Material	Shell Brass, tin plated Insulator and plastic watertight frame Thermoplastic, glass-fibre filled, UL 94-V0 Metal watertight frame Nickel plated zinc die cast Contact material Machined copper alloy
Contact surface	Contact zone S4 = 0.76 $\mu\text{m}$ (30 $\mu\text{inch}$ ) Au or PdNi equivalent Waterproofing element Silicone
Mechanical	Mating cycles $\geq 500$ Mating force per signal contact $\leq 3.4 \text{ N}$ Unmating force per signal contact $\geq 0.2 \text{ N}$

4) Order separately the front sealing rubber for an IP67 performance																							

<sup>1)</sup> The front sealing rubber is to be used with hood 09 67 0xx 0436 and 09 67 0xx 0437 when a mated system needs to have the IP67 performance; in this case, the front sealing rubber is positioned in the IP67 male connector prior to the mating operation with the facing IP67 connector; it provides a full protection of the contacts at the mated area by preventing possible ingress of liquids or dust between the shells.

## HARTING – Guarantee a secure connection

Modern electronic applications demand a high degree of mechanical and electrical security.

To meet these requirements, continuous screening from the cable to the PCB via the connector is achieved by using state of the art components to DIN 41652.

HARTING offer many solutions. These utilise various combinations of male and female connectors with hoods, featuring either screw locking or latching facilities.

Only 2 examples are shown:

- Continuous security screening and grounding with screw locking and metallized hood.
- Continuous grounding and vibration proof latching system with metallized hood.

thread M3		09 67 002 9017		

Tooling see chapter 20

Operating temperature for all components on this page: -20 °C ... +90 °C

## Crimp flange termination instruction

1. Strip the cable sheath to the correct length (approx. 35 to 40 mm, depending on interface type).
2. Place the crimp ferrule over the cable sheath. Bend the outer screen backwards over the cable sheath. Cut screen approx. 2 mm from the end of the cable sheath.
3. Place the crimp flange over the wires covered by the remaining foil shield. Push and twist the crimp flange under the outer screen and cable sheath until the end of the cable sheath touches the crimp flange. HARTING has developed a special tool for optimised installation of the shielding over the crimp flange, part number 61 03 600 0017.
4. Move the crimp ferrule back onto the crimp flange and crimp the two parts together with the special service crimp tool part number 61 03 600 0020. For an optimised crimp process the tool should be positioned as close as possible to the crimp flange sholder.
5. Cut off the internal screen foil and push the crimp flange inside the metal hood.

**HARTING offers to test and define the best crimp flange and ferrule combination for customer specific cables.**

D-Sub

InduCom 9 – Industrial bus interface system

Identification	Part number	General information
MVB Interface	66 63 009 5013	<p><b>MVB backbone interface set</b></p> <p>The Multifunctional Vehicle Bus (MVB) backbone interface is specially designed for communication cables in Train Control Networks (TCN). With this interface it is possible to realise a T-bus structure with MVB-cable with which you can disconnect the bus interface from the control unit without any interruption of the complete bus communication. On the PCB you will have load resistors and test capacitors which can be activated with solder bridges. The wires are terminated with the proven vibration resistant cage clamp technology.*</p> <p><b>Components of the MVB interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 PCB with 9 way D-Sub male connector and cage clamps</li> <li>• 2 crimp flanges for the MVB cable</li> <li>• 2 crimp ferrules for the MVB cable</li> <li>• 1 blanking piece</li> </ul>
WTB Interface	66 63 009 5014	<p><b>WTB backbone interface set</b></p> <p>The Wired Train Bus (WTB) backbone interface is specially designed for backbone cables in Train Control Networks (TCN). With this interface it is possible to realise a T-bus structure with WTB-cable with which you can disconnect the bus interface from the control unit without any interruption of the complete bus communication. On the PCB you will have load resistors and test capacitors which can be activated with solder bridges. The wires are terminated with the proven vibration resistant cage clamp technology.*</p> <p><b>Components of the MVB interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 PCB with 9 way D-Sub male connector and cage clamps</li> <li>• 2 crimp flanges for the WTB cable</li> <li>• 2 crimp ferrules for the WTB cable</li> <li>• 1 blanking piece</li> </ul>

## InduCom 9 – Industrial bus interface system

Identification	Part number	General information
CAN Interface	66 63 009 6016	<p>The Controller Area Network (CAN)-Interface is specially designed for usage in trains. With this interface it is possible to realise a T-bus structure with which you can disconnect the bus interface from the control unit without any interruption of the complete bus communication. On the PCB you will have a load resistor which can be activated with the switch.*</p> <p><b>Components of the interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 PCB with 9 way D-Sub female connector and 2 cage clamps</li> <li>• 1 blanking piece</li> <li>• 2 crimp flanges</li> <li>• 2 crimp ferrules</li> </ul>
Profibus Interface	66 63 009 6004	<p>The Profibus Interface is specially designed for usage in trains and in challenging engineering applications.</p> <p>On the PCB you will have SMD parts which can be activated with solder bridges.</p> <p>The wires are assembled with the proven vibration resistant cage clamp technology.*</p> <p><b>Components of the interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 PCB with 9 way D-Sub female connector and 2 cage clamps</li> <li>• 1 blanking piece</li> </ul>

Further bus PCBs on request

\* To check compatibility with cable types and manufacturers, please contact your local HARTING representative.

InduCom 9 – Industrial bus interface system

Identification	Part number	General information
FIP Interface middle of the line	66 63 009 5017	<p>The FIP (Factory Installation Protocol) Interface is specially designed for applications in trains. It is connected via the D-Sub. The wires are assembled with the proven vibration resistant cage clamp technology.*</p> <p><b>Components of the interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 pcb with 9 way D-Sub female connector and cage clamps</li> </ul>  
FIP Interface end of the line	66 63 009 5018	<p>The FIP (Factory Installation Protocol) Interface is specially designed for applications in trains. It is connected via the D-Sub. On the pcb you will have load resistors. The wires are assembled with the proven vibration resistant cage clamp technology.*</p> <p><b>Components of the interface set:</b></p> <ul style="list-style-type: none"> <li>• 1 metal housing with 2 cable entries</li> <li>• 2 hexagonal screws with UNC 4-40 threads</li> <li>• 1 pcb with 9 way D-Sub female connector and cage clamps</li> <li>• 1 blanking piece</li> </ul>

	37 way	$\leq 123 \text{ N}$
	50 way	$\leq 167 \text{ N}$

## Current carrying capacity

The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals.

The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512.

Example: 25 way connector

① Stamped contacts

## Contact arrangement View from termination side

M = Male connector

F = Female connector

## Mating conditions as per DIN 41652

<sup>1)</sup> Performance level 3, 50 mating cycles, no gas test

Performance level 2 as per CECC 75301-802, 250 mating cycles, 4 days 4 mixed gas test – IEC 60512

Performance level 1 as per CECC 75301-802, 500 mating cycles, 10 days 4 mixed gas test – IEC 60512

## 07. har-link® Interface Connectors

The highest data rates in combination with perfect shielding characterize the *har-link®* connector. This way data can be passed on optimally within the control cabinet. The locking mechanism ensures a vibration-proof connection and easy-to-install handling at a minimum size and maximum options for combination with other units. HARTING offers assembled system cables with shielded or unshielded twisted pairs for the *har-link®* connector family.

### METRIC har-link® INTERFACE CONNECTORS IN 2.0 mm PITCH

HARTING's modular interface connector system, *har-link*® in 2.0 mm pitch, allows data transfer rates up to 2 Gbit/s. The *har-link*® connector system of HARTING complies with the requirements of IEC 61076-4-107 and is a compact and robust PCB-to-cable interface with excellent data transmission properties. All dimensions of the *har-link*® connector are in accordance with IEC 917 and IEEE P 1301 specifications, allowing an easy implementation into both metric and inch-based systems. *har-link*® also supports hot plugging as required by modern bus systems such as CompactPCI, S-bus and VME.

*har-link*® allows data transmission up to 2 Gbit/s per pair and is therefore perfectly suited for modern transmission protocols such as Low Voltage Differential Signals (LVDS).

The thorough EMI shielding of the *har-link*® connector is a guarantee of its superior performance in the EMI-polluted environment.

The high temperature resistant material of the female *har-link*® connector supports reflow soldering.

In addition, HARTING provides cable assemblies. A crimping tool range for terminating male *har-link*® connectors is also available.

## Specific features of the product range

- Data transmission up to 2 Gbit/s
- Is perfectly suited for modern transmission protocols such as Low Voltage Differential Signals (LVDS)

- A screening attenuation of more than 50 dB up to 1 GHz
- The high temperature resistant material of the female *har-link*® connector supports reflow soldering

- Shielding with integrated locking levers
- Due to the locking levers on both sides of the male connector, the connection withstands a pulling force up to 80 N

The **harlink®** connector system of HARTING complies with the requirements of IEC 61076-4-107 and is a compact and robust pcb-to-cable interface with excellent data transmission properties for high-speed networking and telecommunications.

All dimensions of the **harlink®** connector are in accordance with IEC 917 and IEEE P 1301 requirements, which allows for easy implementation into both metric and inch-based systems. In addition, **harlink®** supports hot plugging as required by modern bus systems such as CompactPCI, S-bus and VME.

**harlink®** allows data transmission up to 2 Gbit/s per pair and is therefore perfectly suited for modern transmission protocols such as Low Voltage Differential Signals (see Fig. 1). The design of the **harlink®** connector allows differential pairs to be placed horizontally (parallel to the pcb), thus reducing the skew at high frequencies and considering high signal integrity.

Fig. 1: Eye diagram of a 1280 MBit signal (512 Bits)

The metal shells of the **harlink®** connector are a guarantee for its superior performance in the EMI-polluted environment (see Fig. 2).

Fig. 2: 360° screened-can construction with locking levers

To reach a screening attenuation of more than 50 dB up to 1 GHz, HARTING offers brackets covering each connector in conjunction with a gasket, which is compressed between the bracket and the front panel (see Fig. 3).

Fig. 3: 4 cavities bracket and gasket

Once plugged, the mated pair shows excellent mating safety. Due to the locking levers on both sides of the male connector, the connection withstands a pulling force of up to 80 N (see Fig. 2).

The high temperature resistant material of the **harlink®** female connector body supports the safe reflow soldering process. For easy identification of female modules, six different colours are available (see Fig. 4).

Fig. 4: Female modules

In addition to single connectors, HARTING provides cable assemblies with unshielded twisted pairs or with shielded twisted pairs for high speed applications such as IEEE 1355. A crimping tool range for terminating the male **harlink®** connectors is available.

## 08. SEK IDC Connectors

SEK connectors for flat cables enable simple and –, cost-optimized device configuration. SEK connectors are preferably used for connection within the device. HARTING offers a broad range of these cable-to-board connectors.

Assembly on the cable side takes place in one work step for all contacts via flat conductors. The SEK is an economical and reliable interface for data and signal applications in industry.

### IDC CONNECTOR SYSTEM [2.54 mm X 2.54 mm PITCH] FOR FLAT CABLES

HARTING's product range of flat cable connectors is designed for various cable-to-PCB applications. The HARTING SEK insulation displacement connector technology meets all requirements of the IEC 60 603-13.

HARTING assembles each SEK connector with the matching cable type according to customer specifications in order to simplify customer installation and storage.

The different types of board connectors offer 6 to 64 pins in various terminations such as solder (manual, wave or reflow) or press-in.

The cable connectors are equally suited for indoor use as well as for outdoor applications and harsh environments.

SEK

# Specific features of the product range

## CABLE ASSEMBLIES

- HARTING can supply cable assemblies according to your specifications.
- A wide range of connector types available with various contact arrangements constitute the ideal solution to your wiring problems.
- Cables of all types in economic reel lengths are available.

## QUALITY

- Cables professionally assembled on HARTING work stations ensure reliable connections.
- Finished harnesses are subject to 100% quality checks on a HARTING test device.
- Insulation test by 1000 V.
- Contact resistance test.

## ECONOMY

- The tested assembly of connectors and flat cables from one manufacturer guarantees a high degree of economy and reliability.
- Investments for work stations and test devices are not required.
- Stocks of piece parts are reduced.

## The HARTING Insulation Displacement Connector system

### Economic and reliable connections

The flat cable and connector can be preassembled and used as a component with predetermined functional characteristics.

The HARTING insulation displacement contacts pierce the insulation on the flat cable to provide a durable gastight connection with the wire.

The HARTING insulation displacement technique constitutes the ideal solution to your wiring problems.

For "non standard applications" we can manufacture designs to match your requirements.  
Please discuss requirements with us.

HARTING SEK connectors incorporate the latest design features and provide the assurance of high quality and reliability with economy.

#### Cable assemblies

- HARTING can supply cable assemblies to customer specifications.
- A wide range of connector types available with various contact arrangements constitute the ideal solution to your wiring problems.
- Cables of all types in economic reel lengths are available.

#### Quality

- Cables professionally assembled on HARTING work stations ensure reliable connections.
- Finished harnesses are subject to 100% quality checks on a HARTING test device.
- Insulation test.
- Contact resistance test.

#### Economy

- The tested assembly of connectors and flat cables from one manufacturer guarantees a high degree of economy and reliability.
- Investment for work stations and test devices are not required.
- Stocks of piece parts are reduced.

Number of contacts	6, 10, 14, 16, 20, 24, 26, 30, 34, 40, 50, 60, 64
Contact arrangement	straight, angled
Contact length	2.9 mm, 4.5 mm
Approvals	 IEC 60603-13 DIN EN 60603-13 D 2632 BT 224 NFC 93-428 (HE 10) UL recognized: E102079
Pitch	2.54 mm [0.100"]
Working current	1 A
Working voltage	500 V for pollution degree 1
Test voltage U <sub>r.m.s.</sub>	1 kV
Contact resistance Insulation resistance	$\leq 20 \text{ m}\Omega$ $\geq 10^9 \Omega$
Temperature range	-55 °C ... +125 °C The maximum temperature includes heating of contacts and ambient temperature
Terminations	For pcb hole Ø 1 ± 0.1 mm DIN IEC 52141 Diagonal: 0.79 mm
Materials Moulding	Thermoplastic resin (PBT) UL 94-V0
Contact surface Contact zone	plated according to performance level <sup>1)</sup>

### Current carrying capacity

The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512.

Example: 50 way connector

- ① Temperature rise
- ② Derating
- ③ Derating curve at  $I_{max} \times 0.8$  (IEC 60512-2)

## Board drillings

● Kinked contact: pcb thickness from 1.50 to 1.94 mm after Cu + Sn plating with non-remelted through holes ø 0.80 to ø 0.95 mm. Max. insertion force = 125 N. Min. retention force = 3 N.

○ Non-kinked contact: Solder pins for pcb connections ø 1 ± 0.1 mm as per IEC 60603-13.

Identification	Part number	Drawing	Dimensions in mm
Locking lever for female connector with strain relief in conjunction with <u>low-profile male header</u>  When the security of latching is required and space is a premium, these locking levers can be fitted onto the strain relief of the HARTING female connector.	09 18 000 99054)	<p>Strain relief clamp Female connector Low-profile male header</p>	

\* Not normally kept in stock

<sup>1)</sup> No polarization slot for 6, 10 or 14 way male header<sup>2)</sup> No polarization slot for 6 way male header<sup>3)</sup> Pitch tolerance:  $\pm 0.1$ <sup>4)</sup> Order 2 per female connector

## Accessories

Identification	Part number	Drawing	Dimensions in mm
Polarization key	09 18 500 9902 <sup>1)</sup>		
1) Part number comprises 2 keys			
Locking lever (snaps into place, can be fitted whenever required)	Long: 09 18 000 9903 <sup>2)</sup>  Short: 09 18 000 9904 <sup>2)</sup>	Long   Short 	Short  For use with female connector <u>with</u> strain relief clamp  For use with female connector <u>without</u> strain relief clamp
2) Order 2 per male header			
Fixing screws for 1.6 mm P.C. board	09 18 000 9906 <sup>3)</sup>		For connectors with part numbers 09 18 5xx x9xx: screwing torque 0.2 Nm 09 19 5xx x9xx: screwing torque 0.4 – 0.5 Nm  Screw material: Steel (Inox A2)  Plating: Nickel
3) Part number comprises 50 pieces			
Coding system with loss of contact	Code pin 09 18 000 9901 <sup>4)</sup>  Removal tool for male contacts 09 99 000 0133	To avoid cross-plugging adjacent connectors a coding system is required. A code pin is inserted into the appropriate cavity in the female connector. The corresponding male contact is removed by a special removal tool.  	
4) Part number comprises 6 code pins			

Number of contacts	6, 10, 14, 16, 20, 24, 26, 30, 34, 40, 50, 60, 64
Contact arrangement	straight, angled
Contact length	15 mm
Approvals	IEC 60603-13 DIN EN 60603-13 D 2632 BT 224 NFC 93-428 (HE 10)
Pitch	2.54 mm [0.100"]
Working current	1 A
Working voltage	500 V for pollution degree 1
Test voltage U <sub>r.m.s.</sub>	1 kV
Contact resistance Insulation resistance	≤ 20 mΩ ≥ 10 <sup>9</sup> Ω
Temperature range	-55 °C ... +125 °C The maximum temperature includes heating of contacts and ambient temperature
Terminations	0.6 mm x 0.6 mm Diagonal: 0.86 mm
Materials Moulding	Thermoplastic resin (PBT) UL 94-V0
Contact surface Contact zone	plated according to performance level <sup>1)</sup>

<sup>1)</sup> Performance level 3 as per IEC 60603-13, ≥ 50 mating cycles, no gas test  
Performance level 2 as per IEC 60603-13, ≥ 250 mating cycles, 4 days gas test  
S4, plating = 0.76 µm (30 µinch) Au or PdNi equivalent

## Accessories

Identification	Part number	Drawing	Dimensions in mm
Polarization key	09 18 500 9902 <sup>1)</sup>		
1) Part number comprises 2 keys			
Locking lever (snaps into place, can be fitted whenever required)	Long: 09 18 000 9903 <sup>2)</sup>  Short: 09 18 000 9904 <sup>2)</sup>	Long   Short   For use with female connector <u>with</u> strain relief clamp  For use with female connector <u>without</u> strain relief clamp	Short
2) Order 2 per male header			
Fixing screws for 1.6 mm P.C. board	09 18 000 9906 <sup>3)</sup>	  For connectors with part numbers 09 18 5xx x9xx: screwing torque 0.2 Nm 09 19 5xx x9xx: screwing torque 0.4 – 0.5 Nm	Screw material: Steel (Inox A2)  Plating: Nickel
3) Part number comprises 50 pieces			
Coding system with loss of contact	Code pin 09 18 000 9901 <sup>4)</sup>  Removal tool for male contacts 09 99 000 0133	To avoid cross-plugging adjacent connectors a coding system is required. A code pin is inserted into the appropriate cavity in the female connector. The corresponding male contact is removed by a special removal tool.  	
4) Part number comprises 6 code pins			

Number of contacts	6, 10, 14, 16, 20, 24, 26, 30, 34, 40, 50, 60, 64	Current carrying capacity The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature. Control and test procedures according to IEC 60512.
Approvals	IEC 60603-13 DIN EN 60603-13 D 2632 BT 224 NFC 93-428 (HE 10)  	UL recognized: E102079
Pitch	On pcb side: 2.54 mm [0.100"] On cable side: 1.27 mm [0.050"]	
Rated current	2.5 A min. at ambient temperature of 30 °C	
Working voltage	320 V for pollution degree 1	Example: 50 way connector ① Temperature rise ② Derating ③ Derating curve at $I_{max} \times 0.8$ (IEC 60512-2)
Test voltage U <sub>r.m.s.</sub>	1 kV	
Contact resistance Insulation resistance	≤ 20 mΩ ≥ 10 <sup>9</sup> Ω	
Temperature range	-55 °C ... +125 °C The maximum temperature includes heating of contacts and ambient temperature	
Terminations	IDC flat cable 1.27 mm [0.050"] pitch: AWG 26/7 – AWG 28/7	
Materials Moulding	Thermoplastic resin (PBT) UL 94-V0	
Contact surface Contact zone	gold-plated according to performance level <sup>1)</sup>	

## Insertion and withdrawal forces

Removal tool for male contacts		09 99 000 0133			

<sup>1)</sup> Order 2 per female connector<sup>2)</sup> Part number comprises 6 code pins

Number of contacts	4, 6, 8, 10, 14, 16, 20, 24, 26, 30, 34, 40, 50, 60, 64
--------------------	---

Approvals	UL recognized: E102079
-----------	------------------------

Pitch	On pcb side: 2.54 mm [0.100"] On cable side: 1.27 mm [0.050"]
-------	--

Rated current	2.6 A min. at ambient temperature of 30 °C
---------------	--

Working voltage	320 V for pollution degree 1
-----------------	---------------------------------

Test voltage U <sub>r.m.s.</sub>	1 kV AC – 1 minute
----------------------------------	--------------------

Contact resistance Insulation resistance	35 mΩ max. mated $\geq 10^9 \Omega$
---	--

Temperature range	-55 °C ... +105 °C The maximum temperature includes heating of contacts and ambient temperature
-------------------	--

Terminations	Solder pins: 0.5 mm x 0.35 mm Dimensions for pcb hole: Standard version: $\varnothing 0.8^{\pm 0.1}$ mm Kinked version: $\varnothing 0.85^{\pm 0.15}$ mm Diagonal: 0.63 mm  IDC flat cable 1.27 mm [0.050"] pitch: AWG 28/7
--------------	---

Materials	Thermoplastic resin (PBT) UL 94-V0
Moulding	
Contact	Copper alloy

### Current carrying capacity

The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals.  
The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to IEC 60 512.

Derating curve at  $I_{max} \times 0.8$  (IEC 60512-2)

## Board drillings

● Kinked contact: pcb thickness from 1.50 to 1.94 mm after Cu + Sn plating with non-remelted through holes ø 0.80 to ø 0.95 mm. Max. insertion force = 125 N. Min. retention force = 6 N.

○ Non-kinked contact: Solder pins for pcb connections ø 1 ± 0.1 mm as per IEC 60603-13.

1) No polarization slot  
for 6, 10 or 14 way male header

2) No polarization slot for 6 way male header

3) Pitch tolerance: ± 0.1

## 09. DIN 41 612 Connectors

Connectors that comply with DIN 41 612 have been in use for years for both board-to-board applications and cable-to-board applications. Their robustness and universality are legendary. The classic signal connectors are supplemented by power solutions for allowing insertion of up to 40 A. Plastic, metallized and full metal housings, used in combination with shielded or unshielded cables with a high number of poles, are available for cable-to-board connectors. HARTING offers a wide range of DIN 41 612 connectors and accessories. The following catalogue pages contain an extract from the DIN 41 612 connector program. The complete DIN 41 612 connector program for data, signals and power can be found in the complete DIN 41 612 catalogue.

### Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION						
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	high performance			
							Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current
Cable termination					PCB termination					Application standard
Han-Quick Lock®	IDC	Crimp		THT	SMC	SMT				
Screw	Cage clamp	Axial screw		Press-in						Housing integration
										Separate housing
										Integrated housing

## 09. DIN 41 612 Connectors

In devices for industrial automation and measurement techniques, the DIN 41 612 connector is the standard for board-to-board and cable-to-board connections as both data and power connectors. HARTING offers a wide range of standard connectors complying with DIN 41 612 and IEC 60 603-2, as well as a great selection of complementary types and customer specific solutions. Depending on the application, the 3 to 160 way connectors are offered with various termination methods, each contact capable of carrying from 2 A to 40 A.

HARTING differentiates between DIN Signal and DIN Power connectors depending on the maximum allowed working current per contact: up to 2 A for DIN Signal and over 2 A for DIN Power connectors.

HARTING's range *har-bus® 64* features 160 contacts and is an extension of the 3 row 96 way DIN 41 612 C type range with 2 additional rows. The 5 row *har-bus® 64* connector is 100 % forwards and backwards compatible with the type C connectors according to DIN 41 612. The design of male and female connectors allows the mating of any combination of the 5 or the 3 row variants.

The design of the *har-bus® 64* female allows mating of any combinations of the 5 or 3 row standard male connectors. It is also possible to mate 5 row male connectors with 3 row female connectors.

This kind of backwards compatibility allows the user the staged transition to a higher performance category and simultaneous use of daughter cards in the slots of the previous generation.

Therefore all existing bus systems, for which the 3 row C96 pin connectors are no longer sufficient, can be adapted to the latest requirements without a complete system redesign.

DIN  
41612

## Variety of DIN 41 612 types

Due to the large variety of complementary types, accessories and different kinds of shell housings which are available in plastic, metallized plastic and full metal, DIN 41 612 connector range is considered to be ideal for your robust, reliable and cost-efficient connectivity solution.

The special requirements of industrial electronics can be satisfied with standard types.

## Snap-in clips

In the soldering process, all component terminations including the snap-in clips are soldered and therefore mechanically secured. This provides mechanical protection for the soldered contacts during mating and unmating of the connector.

Mouldings with snap-in clips offer the following advantages:

- Cost reduction when compared with the screw or rivet assembly methods due to the soldering of the clip along with other components in one process.

- The orientation of the clip after soldering in the plated through hole provides mechanical protection against the tensile forces arising from the mating and unmating of the connector.

It is possible to supply the majority of male and female connectors with solder termination with snap-in clips.

## Kinked pins

Before and during soldering, the connectors are fixed onto the pcb with four kinked contacts located in the rows a and c, e.g. the positions a1, c1, a32 and c32 for a fully loaded connector.

Connectors with kinked pins are a reliable alternative for female connectors with straight terminations because no additional elements like screws, rivets or clips are necessary.

Cross section of a connector with kinked contacts assembled to a pcb

## 10. Mini Coax Connectors

The Mini Coax allows multi-pole coaxial data transmission for board-to-board, cable-to-board and cable-to-cable applications with protection up to IP65 / IP67. At the same time, applications up to 2.5 GHz are open on the basis of 50 Ohm. Straight and angled contact inserts in press-in technology are available for device integration.

HARTING assembles Mini Coax connectors with the matching cable type according to customer specifications in order to guarantee top performance of the transmission lines. A special feature is the connector overmolding, which guarantees a top quality and robust connection between the cable and connector.

### MULTI-COAXIAL CONNECTOR SYSTEM MINI COAX

The HARTING multi line Mini Coax connector system for board-to-backplane RF interconnection includes connectors for press-in technology with 1 to 10 coaxial lines. The Mini Coax connector range allows transmission of analogue signals in various applications like cellular base transceiver stations (BTS), repeaters and passenger entertainment systems at radio frequencies up to 2.5 GHz per line at 50 Ohm. Moreover, these compact and rugged connectors provide a 6 Sigma mating reliability thanks to the closed-entry contact design. The compact size of Mini Coax modules (minimum pitch of RF lines is 4.4 mm), combined with excellent RF-performance,

makes this connector system especially suitable for high-end equipment.

The twin modules are available in metric sizes of 1.00, 1.25 and 1.50 SU (SU = System Unit = 25 mm) for both cable assemblies and PCBs with 2 to 10 coaxial lines, as well as a single row version with 1 to 3 coaxial lines.

HARTING offers customised cable assemblies including adaptor cables to the most popular discrete coaxial contacts such as SMA, SMB, BNC, N-Type, etc. A complete range of accessories and tools supports the wide product range.

## CAN BE USED IN MIXED CONFIGURATION

As board-to-board connectors Mini Coax and *har-bus® HM* connectors can be used on board in any mixed configuration.

## HIGH DATA TRANSMISSION RATE

The press-in termination offers an easy processing with very high frequency rates up to 2.5 GHz (even 4.5 GHz with the single row connector).

## IP65 ENVIRONMENT

The combination of a Mini Coax connector with a Han® housing results in a proper IP65 Industrial Mini Coax connector.

The Mini Coax connector is a multi line RF connector for blind mating of board-to-board, board-to-cable or cable-to-cable applications. The Mini Coax connector is mainly used in both RF (Radio Frequency) and IF (Intermediate Frequency) signal transmission and is specified for a frequency range from DC to 2.5 GHz and beyond. Thanks to its compact size (a 10 coaxial contacts' connector is as small as a PC's enter key) and excellent crosstalk features, this connector system is ideal for high end equipment within cellular telecom infrastructure.

The isolated coaxial lines are implemented in a plastic housing that defines the module size in a metric scale from 1.00, 1.25 and 1.50 SU

(SU = System Unit = 25 mm). The Mini Coax connectors are available as straight sockets and right angled plugs. Both types are executed in press-in technology for the PCB (Printed Circuit Board) termination. The straight modules are delivered with an inserted plastic cap that protects the coaxial contacts against dust and dirt, as well as being used as an upper press-in tool. In this way, an easy and safe flat rock process is guaranteed.

The contacts of the Mini Coax single-row connector are single line, as opposed to the standard connector. This delivers enhanced performance, especially in terms of isolation, and is also suitable for slim cabinet applications.

related to it's longitudinal axis possible

The Mini Coax product range also includes various cable assemblies and accessories, which provide customers with flexible application options.

The Mini Coax cable connector is available as plug and socket and is crimped to a coaxial cable that can be individually assembled with RF-cable connectors (SMA, SMB, N-type ...). While delivering high RF transmission performance, the moulded Mini Coax cable assemblies provide robust connections. The various angle mould types meet different cable routing requirements according to the available space. Thanks to various accessories, such as backplane frame, Han® housing insert and press-in cable housing ..., customized connecting requirements can be met.

**Remark:**

The cable assemblies and accessories shown are part of the overall product range.

**Additional, customized parts are available on request.**

### General information

The Mini Coax-to-SMA Adapter can be directly connected to measurement instrument cables. This allows the precise RF transmission characterization of module cards, backplanes and cable assemblies.

### Features:

- SMA connector directly attached to the Mini Coax
- Impedance deviations between adapters < 1.5 Ω
- Good reproducibility of test results
- Test results between different labs are comparable
- Precise measurements of Mini Coax connector system

### Electrical characteristics

Mini Coax test adapter	Impedance values @ 31.5 ps rise time at reference plane (10% - 90%):		Max. impedance deviation [Ω]

# 11. har-bus® HM Connectors

har-bus® HM connectors are the basis for configuring high-performing backplanes for control and industrial computer systems in 19" technology. These connectors are standardized for the CompactPCI and the VME64x bus. All connectors are designed for press-in technology, the female connectors are also available as a solder version.

## Application profile:

## HARD METRIC CONNECTORS *har-bus® HM* IN 2.00 mm PITCH

*har-bus® HM* connectors are the basis for configuring high-performing backplanes for control and industrial computer systems in 19" technology.

HARTING offers 5 row and 8 row 2 mm hard metric connectors *har-bus® HM* according to IEC 61076-4-101. The product family includes all standard types such as all variants for CompactPCI, inclusive Hot Swap and CTI (Computer Telephony Integration). The modules are defined as the 5+2 row types A, B, AB and C and the 8+2 row types D, E and DE. All male and female connectors are available with press-in terminations.

The high current *har-bus® HM* Power connector complies with the OBSAI specification V1.1. This very compact connector can be loaded with up to four contacts, each contact carrying up to 23 A at 70 °C (in OBSAI configuration). The connector is offered in four lengths to allow hot swapping. The right-angled male connectors are available for press-in and for PiHIR soldering.

Accessories and press-in tooling are available for all connectors.

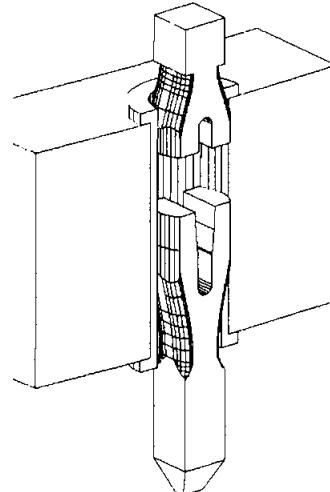

## COMBINED STYLE FOR CompactPCI:

Additional to the standard insulator types according to the specification there is a Monoblock available, especially for CompactPCI applications. It unites the type A and the type B<sub>22</sub> in one connector. With the Monoblock, only one connector is necessary for a standard configuration of a 3U module card which offers a cost advantage in the production process and logistics.

## "NEEDLE-EYE" PRESS-IN TECHNOLOGY:

The *har-bus® HM* press-in zone is based on the industry renowned needle-eye technology. Its special design allows for compensation of tolerances of pcb surface properties (e.g. superfluous tin plating). The excessive material is displaced within the plated through hole, whereby a gas-tight and corrosion resistant electrical connection is assured.

## INTERNATIONAL STANDARD:

The *har-bus® HM* connectors are designed to meet the PICMG 2.x specification and can be used in CompactPCI. CompactPCI is a common standard e.g. for industrial computers.

Due to the high deformation capability and resilience of **harbus<sup>®</sup> HM** press-in contacts, they can be easily and repeatedly removed in case of repairs without impairment to their functioning.

**harbus<sup>®</sup> HM** press-in contacts are extremely versatile and offer a reliable electrical contact, therefore they are especially well suited for applications with these surfaces.

Please contact us for detailed test reports.

### Benefits of press-in technology

- Thermal shocks associated with the soldering process and the risk of the board malfunction are avoided.
- No need for the subsequent cleaning of the assembled pcb's
- Unlimited and efficient processing of partially gold-plated pins for rear I/O - manual soldering is no longer necessary!

### Recommended configuration of plated through holes

The press-in zone of the **harbus<sup>®</sup> HM** connectors is approved to be used with a plated through hole according EN 60 352-5 with a diameter of  $0.60 \pm 0.05$  mm (drilled hole  $0.7 \pm 0.02$  mm).

Based on our experiences regarding the production process of the PCB manufacturer, we recommend a plated through hole configuration like shown in the below spreadsheet. To achieve the recommended plated through hole diameter, it is important to specify especially the drilled hole diameter of  $0.7 \pm 0.02$  mm to your PCB supplier.

Tin plated PCB (HAL)	Hole-Ø	$0.7 \pm 0.02$ mm
	Cu	min. 25 µm
	Sn	max. 15 µm
	Plated hole-Ø	0.60-0.65 mm
Chemical tin plated PCB	Hole-Ø	$0.7 \pm 0.02$ mm
	Cu	min. 25 µm
	Sn	min. 0.8 µm
	Plated hole-Ø	0.60-0.65 mm
Au / Ni plated PCB	Hole-Ø	$0.7 \pm 0.02$ mm
	Cu	min. 25 µm
	Ni	3-7 µm
	Au	0.05-0.12 µm
	Plated hole-Ø	0.60-0.65 mm
Silver plated PCB	Hole-Ø	$0.7 \pm 0.02$ mm
	Cu	min. 25 µm
	Ag	0.1-0.3 µm
	Plated hole-Ø	0.60-0.65 mm
OSP copper plated PCB	Hole-Ø	$0.7 \pm 0.02$ mm
	Cu	min. 25 µm
	Plated hole-Ø	0.60-0.65 mm

PCB board thickness:  $\geq 1.4$  mm

Derating curve

Recommended configuration of plated through holes,  
valid for **harbus<sup>®</sup> HM**

HARTING offers 13 contact lengths for **harbus® HM** male connectors: the standard mating length of 8.2 mm, pre-leading contacts with 9.7 mm and extra long contacts preferred for shielding with 11.2 mm mating length.

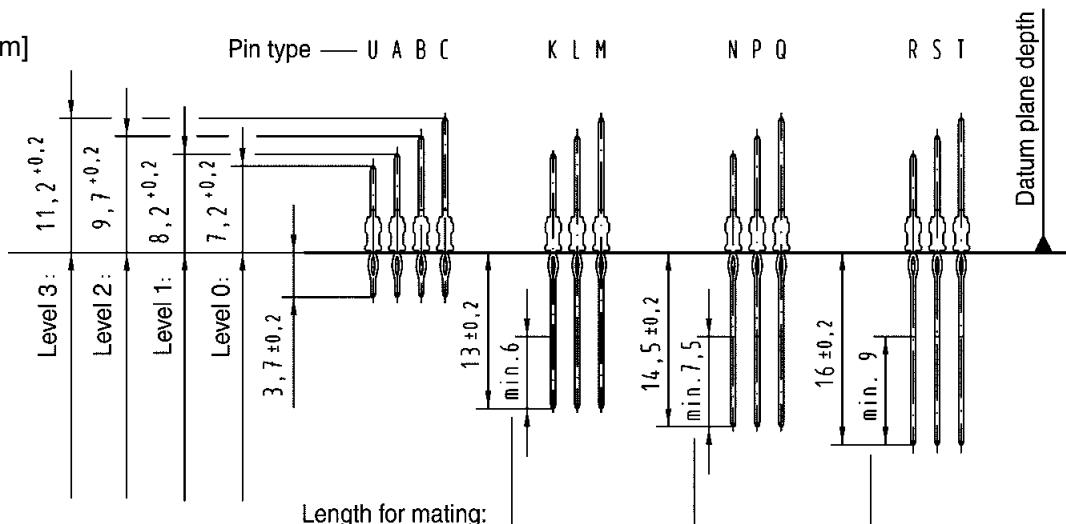

On the termination side the standard length is 3.7 mm. With the three termination lengths of 13.0, 14.5 and 16.0 mm even for rear I/O applications different mating levels are possible, depending on the pcb thickness and shroud height.

For the standard termination length, an extra short contact for special applications with a mating length of 7.2 mm is available.

The different contact lengths are designated with letters to identify them in the configurations. For special loadings please use the customer request form at the end of this chapter.

All contacts are offered with press-in termination 'eye of the needle'. In accordance with the application they can be delivered in performance level 1 or 2.

Contact dimensions [mm]

## Circuit density

When using the specified diameter of the finished through hole according to IEC 61 076-4-101 ( $0.6 \pm 0.05$  mm) with an appropriate annular ring, the remaining distance between the rings is about 1 mm. Under the condition that the width of the track and the space between should be equal, two tracks of 0.2 mm width or three tracks of 0.14 mm width can be placed between two rings. Typical designs are shown in the drawing on the right side.

## Alignment of male and female connector

For the alignment of male and female connector, a common reference plane is defined. This reference plane is the top side of the daughterboard pcb and the contact rows "b" of the female and the male connector (see drawing).

All HARTING **harbus® HM** connectors can be assembled end to end in any configuration.

m = male connector  
f = female connector

### Improved guiding with AB-modules:

In accordance with the equipment practice each front side arrangement of **harbus® HM** connectors shall have at least one A-module per slot to ensure that the connector can accommodate  $\pm 2$  mm alignment tolerances in rack systems.

On some rear I/O arrangements the A-module's alignment capability cannot be utilised, because only B-modules are used for feed through. Consequently AB-modules were introduced to ensure guiding capabilities where formerly only B-modules were used. Those AB-modules represent a combination of A- and B-modules and are specified in **CompactPCI by PICMG 2.0 Rev. 3.0** for certain rear I/O applications.

The AB-modules have guiding pegs similar (but not mating compatible to prevent mismatching) to those

of the A-module providing the same proven mating tolerances of  $\pm 2$  mm. The AB-modules have no coding center but are fully equipped with contacts in order to maintain the full density as per the B-modules.

The **AB-female** connector mates either with an **AB-shroud** or with **AB-male** connectors. The centered pin positions of the shielding rows of male connectors are simply equipped with short spill contacts (if standard connector and shroud are used). This prevents that the guiding peg of the female AB-module stubbing on the feed through contacts of the front side's fixed connector. These fixed connector loadings are called **AB-friendly**.

The AB-male connector will not be equipped with shielded contacts in the centre where the guiding peg will engage.

Fig. 3: CompactPCI 6U configuration

*CompactPCI®* as a standard is maintained and enhanced by the PCI Industrial Computer Manufacturers Group (PICMG®). It defines a combination of the electrical and logical specifications of the PCI standard and the mechanical specifications of the IEEE 1101 and IEC 60297 series of standards. The board connector has been developed from the IEC 61076-4-101 series of 2.0 mm connectors. The mounting location and dimensions for the 2.0 mm connectors are specified in IEEE 1101.11. Some additional mechanical definitions for 2.0 mm connectors in the Eurocard format are being specified in the VITA 30 draft.

Other international standards are listed in the *CompactPCI®* standard for environmental and

Slave or peripheral boards need J1/P1 as a minimum, master or system boards need both J1/P1 and J2/P2 as a minimum. Backplanes should always have the full complement of

connectors to be compatible with any type of board. As opposed to the CPCI standard (pins numbered from bottom to top), the contact numbers on the connector are numbered from top to bottom (according to the IEC standard).

The front panel of CPCI cards may be equipped with additional keying pegs to code individual board types. There is also an extended pin length to remove any electro static charge before contacts on the rear connectors mate.

This pin also functions as a mechanical guide to position the board as straight as possible for insertion. This prevents pin bending and lowers the insertion force.

Some applications could require up to 500 pins to be pushed into sockets simultaneously.

Connectors for high availability applications (hot swap) come with 3 different lengths of pins for a staged sequence of mate or break of contact.

Connector J1/P1 carries the signals for a 32 bit PCI bus (see table of contact assignments for J1/P1). Connector J2/P2 on a system card has the additional signals for a 64 bit PCI bus and some user-defined I/O (see table of contact assignments for J2/P2). On slave cards all of J2/P2 might be user-defined I/O except the top row which carries the signals for geographical addressing. J3/P3 should be reserved for other system bus definitions. J4/P4 and J5/P5 are used for I/O or secondary buses, e.g. H.110 in telecom applications or for bridges into other buses like VMEbus.

This is used to accommodate two bus platforms in one card cage on one backplane.

related specifications. This gives *CompactPCI®* a solid foundation of international standards and practices for mechanical robustness.

The board format is either a 3U or a 6U Eurocard as defined in IEC 60297. There are two or five connectors specified for 3U or 6U boards respectively. Connectors are numbered from J1/P1 through J5/P5 (bottom to top) on the board or backplane.

In mechanical terms J1/P1 is a 25x5 matrix of contacts. Three rows of 5 contacts (rows 12 - 14) are not used for electrical contacts. Instead, plastic keys of different orientation and configuration are used to key board locations as to system or peripheral slot, voltage options, etc.

J2/P2 is a shortened connector with only 22 rows of contacts instead of 25 rows for a standard size. HARTING now offers monolithic versions with J1/P1 and J2/P2 combined in one single connector.

This combination together with some space left on the card to fit into guide rails makes maximum use of the 100 mm rear edge of the 3U Eurocard.

On a 6U card this connector setup is repeated on J4/P4 and J5/P5.

The J3/P3 connector is a shortened version of the 2.0 mm connector with 19 rows of 5 signal contacts.

The size results from the height of a 6U board (233 mm) which is more than double the height of a 3U board.

All connectors used for *CompactPCI®* are based on a 7 column pitch. The inner 5 columns are used for logic signals and power. The outer columns on either side are reserved for shielding or ground.

Executive Member

The VMEbus has evolved over a period of more than 25 years to become the leading bus architecture in open industrial applications. The specification is an ANSI norm, the original specification has been extended to become a draft standard VME64x ANSI/VITA 1.1-1997. This draft standard includes the specification for the 5-row DIN compatible connector (IEC 61076-4-113) and for a centre connector J0/P0 on 6U VME cards, which is identical to J3/P3 in *CompactPCI*® systems.

In VMEbus systems it is possible to use custom connectors in the J0/P0 area (e.g. coax connectors). To prevent problems with non-mating backplanes it is strongly recommended to use front panel keying. The IEEE 1101 documents J0/P0 can also be used with rear transition modules for pluggable I/O cabling. As mentioned above, the contacts on this connector may be bussed. One example is the ATM CellBus, which is in the process of being standardised. The bus on J0/P0 connectors might actually be a plug-on mezzanine backplane rather than conducting traces integrated into the backplane itself.

The 2.0 mm J0/P0 connector in VME64x systems is used for additional I/O, for new high speed sub busses or I/O for mezzanine modules, e.g. IP modules on VMEbus boards. The connector is placed on the Eurocard to work in combination with the non-metric original VMEbus connectors DIN 41612 type C or the newer 5-row connector har-bus® 64. The mounting location and dimensions for the J0/P0 VMEbus connector (IEC 61076-4-101) is specified in IEEE 1101.11. The VMEbus 2.0 mm connector uses 5 columns of signal contacts and optional two additional outer columns on either side for shielding. All 95 signal contacts are user defined.

## Notes

The **harbus® HM** Power connector is designed according to the OBSAI Specification V 1.1. It is well-suited to be used in conjunction with 2 mm **harbus® HM** connectors. The durability is according to IEC 61076-4-101 (250 mating cycles).

The straight female connector for the backplane is fitted with press-in contacts, the right angled male connector for daughter cards can be supplied with either, press-in or PIHIR (Pin In Hole Intrusive Reflow) termination.

The compact, high temperature moulding can be loaded with up to four high current contacts. Four different contact lengths are available from 7.4 mm to 12.35 mm. This makes sequenced and non-sequenced loadings possible (e.g. with GND and ENA). Any other contact assignments, also partially loaded, are available on request.

Loaded with four power contacts, each contact can carry up to 20 A @ 70 °C / 80 % derating.

**With a configuration of two power contacts, GND and ENA, the current carrying capacity is even up to 23 A @ 70 °C / 80 % derating per contact.**

- ① Temperature raise
- ② Derating
- ③ Derating curve at  $I_{max} \times 0.8$  (DIN EN 60512-5-2)

The distance between adjacent contacts is 3 mm, which enables wider PCB traces, larger solder paste areas and an improved heat dissipation. For the female backplane connector no special tooling is necessary due to the flatrock design. For the male connector HARTING offers a special press-in tool (see chapter 20).

HARTING's **harbus® HM** Signal and Power connectors meet OBSAI (Open Base Station Architecture Initiative) specifications and provide a reliable and cost effective solution for connecting plug-in units to the backplane. The connector solutions available from the HARTING technology group will offer full compatibility and intermateability with base station modules.

#### Benefits:

- Small form factor
- High current rating up to 23 A per contact (OBSAI configuration)
- 3 level staggering (or even 4)
- Flatrock design
- Matched with **harbus® HM** 2 mm connectors

Design according	: OBSAI System Spezifikation V 1.1
Approvals	
Underwriters Laboratories Inc.®	: cRus with their respective ratings documented in file E 102079
Number of contacts	: up to 4
Contact spacing	: 3.00 mm
Clearance and creepage distances between contacts	: > 2.3 mm
Working current	: 23 A max. (OBSAI configuration) 20 A max. (fully loaded with power contacts)
Test voltage U <sub>r.m.s.</sub>	: AC 1500 V min.
Contact resistance	: < 1 mΩ
Insulation resistance:	: > 10 GΩ
Temperature range during reflow soldering	: - 55 °C ... + 125 °C 220 °C for 2 minutes, 260 °C max. short-term
Durability as per IEC 61076-4-101	: <i>Performance level 2 = 250 mating cycles in total.</i> First 125 mating cycles, then 4 days gas test using 0.5 ppm SO <sub>2</sub> and 0.1 ppm H <sub>2</sub> S (at 25 + 2 °C and 75 + 3 % humidity). Measurement of contact resistance. The remaining 125 mating cycles are subject to measurement of contact resistance and visual inspection. No abrasion of the contact finish through to the base material. No functional impairment.
Termination technique	
Male connectors	: Press-in or solder termination, suitable for (lead-free) pin-in-hole reflow soldering
Female connectors	: Press-in termination
Mating force	: max. 4 N / contact
Withdrawal force	: min. 0.5 N / contact
Materials	
Mouldings	: Thermoplastic resin, glass-fibre filled, UL 94-V0
Contacts	: Copper alloy
Contact surface	: Selectively gold plated (contact zone)
Contact styles	: Standard, leading, lagging
Packaging	
Tube	: Male and female connectors
Tape & Reel	: On request for male solder connectors

Coding keys are used to prevent mismatching of boards. They can be inserted into the multifunctional area of male and female connectors with special tooling. This can be easily done after the connectors have been pressed in.

Coding keys have different bright and pre-defined RAL colours to simplify the identification. In the table below the colours and code numbers in acc. with the IEC 61076-4-101 are listed. They are used for the following applications:

#### Coding keys for male connectors

Coding key	Code number	Colour	Part number
	3568	Pastel orange RAL 2003	17 79 000 0010
	3478	Steel blue RAL 5011	17 79 000 0011
	3467	Slate grey RAL 7015	17 79 000 0012
	3456	Cadmium yellow RAL 1021 for CPCl, 3.3 V	17 79 000 0013
	2578	Reseda green Ral 6011	17 79 000 0014
	1567	Brilliant blue RAL 5007 for CPCl, 5.0 V	17 79 000 0015
	1356	Blue lilac RAL 4005	17 79 000 0016
	1248	Strawberry red RAL 3018	17 79 000 0018
	1236	Nut brown RAL 8011	17 79 000 0019

- Cadmium yellow for CompactPCI to identify 3.3 V bus signalling
- Brilliant blue for CompactPCI to identify 5.0 V bus signalling
- Reseda green to prevent accidental board insertion in VME64x on CompactPCI applications
- Strawberry red to prevent accidental board insertion in telephony applications
- Pastel orange for user defined bus
- Nut brown for rear I/O and user I/O

#### Coding keys for female connectors

Coding key	Code number	Colour	Part number
	1247	Pastel orange RAL 2003	17 79 000 0020
	1256	Steel blue RAL 5011	17 79 000 0021
	1258	Slate grey RAL 7015	17 79 000 0022
	1278	Cadmium yellow RAL 1021 for CPCl, 3.3 V	17 79 000 0023
	1346	Reseda green Ral 6011	17 79 000 0024
	2348	Brilliant blue RAL 5007 for CPCl, 5.0 V	17 79 000 0025
	2478	Blue lilac RAL 4005	17 79 000 0026
	3567	Strawberry red RAL 3018	17 79 000 0028
	4578	Nut brown RAL 8011	17 79 000 0029

HARTING's **harbus<sup>®</sup> HM** shrouds protect the pins protruding the rear side of the backplane from irregular mating tolerances, thus ensuring a quality connection.

To accommodate pcb thickness, from 1.6 up to 4 mm nominal, the shrouds have integrated standoffs of corresponding height.

Thus forming a one piece solution that reduces assembling cost significantly.

The shroud can be mounted without the additional requirement of spacers to ensure the desired pin lengths on the rear side of the pcb.

Fixing of the component is carried out on the rear post via a smooth friction fit process.

For ease of assembly the same tooling as for the press-in connectors on the front side is utilised for assembly.

Receptacle for guide pin	07 73 000 0280

#### Dimensions [mm]

Guide pin

Receptacle  
for guide pin

Board drillings  
(View-X)

1) Non-metallised drillings

2) No tracks, except solder eyes

3) Limit area of components (valid for both pcb sides)

4) Recommended board drilling is 3.5 (-0.05) mm

#### General information

The guide pin solution from HARTING allows safe mating under sometimes extreme conditions. This might be large and heavy boards that bow under their own weight. Also insufficiently aligned or worn out rack systems can be tolerated better with the use of HARTING's guiding system, which also reduces the potential danger of damaging cards when being forced into flexing racks.

The guide pin and receptacle's design solution allows to overcome a 3 mm [.118"] offset between the backplane and the mating daughter card. The reducing diameter of the pin (from 4.85 mm to 3.4 mm) ensures that its positioning task is smoothly transferred to the connectors as soon as they start to engage. Finally the thin diameter section of the guide pin is no longer positioned by the ferrule of the receptacle, ensuring that the pin is able to freely follow any movement imposed by the engaging connector. This ensures that there is no static stress between the connectors and the guiding system.

The rugged metal designed guide pin is screwed to the backplane with standard hexagon screws. Whereas the molded receptacle is designed with four press-in pegs that can be installed to the board together with the connectors.

The tooling can be ordered with the part numbers **07 79 000 0157** (top tool) and **07 79 000 0158** (bottom tool).

## Notes

## 12. TCA Connectors

The TCA connectors have been specifically developed for the next generation of telecom, medical and industrial applications. The compact connector allows the transmission of highest data rates. Thanks to the innovative GuideSpring concept, the direct plug-in of a PCB is possible without any safety loss. The power connector offers power contacts with the current carrying capacity of up to 16 A as well as contacts for signal transmission. HARTING offers application-specific design-in support for the connectors, as well as the system analysis support.

### Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION			high performance

### CONNECTORS FOR TCA

The TCA connectors have been developed for the open hardware standards AdvancedTCA®, AdvancedMC™ and MicroTCA™. They are specified by the PCI Industrial Computer Manufacturers Group (PICMG), a consortium of more than 450 product suppliers. These innovative systems are finding increasing use for industrial control systems and computer systems. HARTING is an active member of the PICMG and participated in the standardization process of the connectors for these systems. HARTING offers several connectors for signal and power transmission. With the new “**con:card+**” connectors with press-in termination, HARTING has substantially improved the contact reliability of the

AdvancedMC™ connector for MicroTCA™ and AdvancedTCA®. The key element of the new “**con:card+**” connector is the integrated GuideSpring, which is able to compensate any tolerance deviations of the AdvancedMC™ printed circuit boards by centrally positioning the circuit board within the connector slot. The GuideSpring allows HARTING to ensure the reliable connection of the circuit boards, which can be manufactured in large-scale production today.

Other advantages of the “**con:card+**” technology are the extremely smooth contact surface and a robust contact coating which allows the specified 200 mating cycles between the daughter card and the card edge connector.

## HIGH CONTACT RELIABILITY

The "con:card+" technology offers highest contact reliability as required for industry applications.

## INTERNATIONAL STANDARD

The TCA connectors meet the requirements of the PICMG (PCI Industrial Computers Manufacturers Group) specifications AdvancedMC™, Advanced TCA® and MicroTCA™ and can be used for these applications.

PICMG, formally known as the PCI Industrial Computing Manufacturing Group – is an industry consortium of over 450 companies. PICMG's purpose is to define standard architectures in an effort to reduce system costs and development cycles and since its 1994 foundation, PICMG has been responsible for the establishment of several of successfully implemented, open, industrial standards. Open standards have proven themselves to be very advantageous for system manufacturers and end-user, because they create multiple vendors of similar parts, low prices at high volumes, and a shortened time-to-market.

Historically, PICMG has created several successful standards.

- PICMG 1.x Series – a passive backplane PCI specification
- PICMG 2.x Series – the CompactPCI® standard

## AdvancedTCA®

Today, the AdvancedTCA® series of specifications (PICMG 3.x) targets the requirements of the next generation of carrier grade telecommunications equipment. AdvancedTCA®, short for Advanced Telecom Computing Architecture and sometimes simply abbreviated ATCA®, incorporates an impressive suite of recent technological advancements including the latest trends in high speed interconnect technologies.

Features of AdvancedTCA® include optimization for high-capacity, high-performance telecom and industrial applications, improved reliability, manageability, redundancy, and serviceability. Encompassing a technological growth path valid for up to ten years, AdvancedTCA® has earned a solid position within the telecom systems market.

AdvancedTCA® chassis with backplane

The rack or chassis, is responsible for housing the backplane and the daughtercards, as well as cooling and powering the system. HARTING offers the ATCA® power connector that energises the blades, both the straight backplane and the right angled daughtercard connector.

The backplane, said to be passive, is merely a medium for the daughtercards to communicate with each other. And, the daughtercards, sometimes called blades or boards, provide the system with its functionality and allow for an easy, hot-swappable module exchange from the front of the system.

Initially, many blades were designed with a fixed functionality, and they had to be replaced once their functionality became obsolete or the demands of the system changed. With the continuation of exponential technological growth, concept proved to be a costly endeavour for the end-user.

## AdvancedMC™

To extend the functionality and modularity of AdvancedTCA®, blade manufacturers conceived the idea of upgradeable daughtercards, and began to insert mezzanine cards onto the blades when needed. To achieve a common mezzanine concept, PICMG developed the Advanced Mezzanine Card (AdvancedMC™) standard AMC.0.

AdvancedMC™ modules for different applications

For the use of Advanced Mezzanine Cards, as well called AdvancedMC™ modules, a carrier is necessary. A carrier is an ATCA® blade with only little functionality beyond AdvancedMC™ management. It contains the mechanical environment for the AdvancedMC™ modules. Depending on their size, up to eight AdvancedMC™ modules can be hot-swapped in and out of a carrier, this enabled the

## General information

AdvancedTCA® carrier board with AdvancedMC™ modules

creation of extremely scalable and upgradeable systems.

To connect AdvancedMC™ modules to carrier boards PICMG defined a new high-speed mezzanine connector: the AdvancedMC™ connector – a card edge connector mounted on the carrier board. It contacts directly with the module's PCB gold pads. Although PICMG defined four AdvancedMC™ connector types (B, B+, AB and A+B+), current market developments focus on type B+.

The HARTING AdvancedMC™ B+ connector features a new design element that supplements the standard – the GuideSpring. The GuideSpring significantly increases the mating reliability and prevents contact interruptions and surface wear when subjected to shocks or vibrations.

The press-fit termination technology provides significant cost and durability advantages over other termination technologies. The connector design allows for the use of a standard flat rock die. For more press-in process control, HARTING offers a special top and bottom tool.

This revolutionary AdvancedMC™-based design concept has led to the recent development of a completely mezzanine-based system – MicroTCA™. MicroTCA™, short for Micro Telecom Computing Architecture, is a more cost-efficient platform than AdvancedTCA® when dealing with smaller applications, yet powerful enough to address the needs of telecom, enterprise and medical applications.

This newly-implemented PICMG standard, outlined in the MTCA.0 specification, presents a design-concept whereby AdvancedMC™s – the same kind used in ATCA® systems – plug directly into a passive backplane; this eliminates the need for carrier boards.

MicroTCA™ double cube system

Naturally the mating face of the AdvancedMC™ connector for MicroTCA™ is the same as for ATCA®, but with a right angled mating direction. It contains the new GuideSpring and is available in press-in termination. PICMG members voted HARTING's MicroTCA™ connector footprint as the new MicroTCA™ standard connector for press-fit termination technology.

AdvancedMC™ and power connectors for MicroTCA™

The MicroTCA™ backplane is typically powered by special, field replaceable, hot-swappable, redundant Power Supply Units (PSU). The PSU connects to the backplane through a MicroTCA™ power connector (press-fit termination) also available from HARTING.

MicroTCA™ backplane

The module management is performed by a MicroTCA™ Carrier Hub, or MCH. An MCH is connected to the backplane by up to four adjacent card-edge connectors. One MCH can control up to 12 AdvancedMC™ modules, thus depending on redundancy requirements, workload, or both, one or two MCHs may be used within a single system.

## What is **con:card+**?

**con:card+** is a quality seal for AdvancedMC™ connectors that helps to deliver a significant increase in the reliability of MicroTCATM and AdvancedTCA® systems. In order to reach the target availability of 99.999 %, all system components must be carefully coordinated, and they must function reliably. The selection of suitable connectors is an essential, decisive factor here, as today it is virtually impossible for series production to meet the strict tolerances for the AdvancedMC™ modules as defined in the respective specifications. The so-called GuideSpring is ideally suited for compensating here, and represents just one of a total of five key advantages of the **con:card+** philosophy. All the advantages are introduced in the following. Please find further information also on the internet at [www.concordplus.com](http://www.concordplus.com).

## Special contact design

*Unlike conventional mating systems with male and female connectors, the AdvancedMC™ has only one, not two, contact tongues per contact. In order to ensure a permanently reliable contact, this single contact tongue must press against the gold pad with sufficient force throughout the entire lifetime. In addition, the thickness of the AdvancedMC™ modules may fluctuate by ±10 %. To meet this challenge, HARTING utilizes a special contact design with very low relaxation for the **con:card+** connector.*

## PdNi contact coating

*In order better to meet the high requirements placed on the connectors, a palladium-nickel surface (PdNi) with additional gold flash is used. As a result, wear resistance is increased by roughly 30 %. Even when applied very thinly, PdNi surfaces offer a quality and corrosion-resistant coating that meets the high requirements placed on the connection far better than pure gold.*

## Smooth contact surface

The specification for the AdvancedMC™ entails 200 mating cycles for a module. On the PCB, the nickel/hard gold layer on the relatively soft copper can only stand up to this high load if the contact surface is absolutely smooth.

This is the case with the **con:card+** connector. With years of experience in stamping techniques and the utilization of high-performance stamping tools with special process components, HARTING is actively involved in minimizing gold pad wear.

## GuideSpring

PCB manufacturers are not capable of meeting the AdvancedMC™ modules' tight tolerances with certainty in the series process today. Just a single card with tolerances slightly larger than allowed by the specifications can lead to a system breakdown.

The **con:card+** GuideSpring offsets these tolerance deviations by constantly pressing the module against the opposite wall. As this is displaced somewhat towards the middle, the slot is optimally designed for the AdvancedMC™ module, and the mating reliability increases tremendously.

In addition, the GuideSpring secures the module position in the case of shocks and vibrations. This prevents loss of contact and surface wear.

## Press-fit technology

Press-fit technology results in a gas-tight, corrosion-resistant, low-ohm quality mechanical connection between the pin and the through contacting of the PCB. This remains reliably in contact and stable, even under conditions of high mechanical and thermal loads, such as vibration, bending and frequent temperature changes. This technology represents a tremendous advantage over other processing techniques. Measurements substantiate that the required transmission rates are easily attained.

## Technical characteristics

Design according	PICMG AMC.0 (RoHS compliance)
Number of contacts	170
Contact spacing	0.75 mm
Clearance and creepage distance between contacts	0.1 mm min.
Working current of power contacts as defined in AMC.0 spec.	~ 2.2 A @ 70 °C max. 30 °C temp. rise (PICMG requirement min. 1.52 A)
Test voltage	80 V <sub>r.m.s.</sub>
Working voltage typically	3.3 V; 5.0 V; 12.0 V
Initial contact resistance ground contacts	60 mΩ max.
signal, power, general purpose contacts	90 mΩ max.
Initial insulation resistance	100 MΩ min.
Nominal differential impedance	100 Ω±10 %
Max. crosstalk @ 25 ps risetime	Bottom route
Adjacent	0.55 %
Basic-to-extended (diagonal)	0.68 %
Basic-to-extended (opposite)	0.39 %
Multiline (five multi-aggressor differential pairs)	2.74 % max.
Differential propagation delay	Basic side: 125 ps Extended side: 145 ps
Differential skew	Between basic and extended side: 20 ps Within basic and extended side: ±2 ps
Temperature range	-55 °C ... +105 °C
Durability as per AMC.0 specification	200 mating cycles
Termination technique	Press-in termination
Mating force	100 N max., typically 65 - 90 N (depending on AdvancedMC™)
Withdrawal force	65 N max., typically 30 - 45 N (depending on AdvancedMC™)

### Materials

### Recommended plated through hole specification

	A	Drill hole-Ø	0.64 <sup>±0.01</sup> mm
	B	Cu	25 - 35 µm
Tin plated PCB (HAL)	C	Sn	5 - 15 µm
	D	Hole-Ø	0.53 - 0.60 mm
Au / Ni plated PCB	C	Ni	3 - 7 µm
	Au	Au	0.05 - 0.12 µm
Chemical tin plated PCB	D	Hole-Ø	0.55 - 0.60 mm
	C	Sn	0.8 - 1.5 µm
OSP copper plated PCB	D	Hole-Ø	0.56 - 0.60 mm
	C	---	---
	D	Hole-Ø	0.56 - 0.60 mm
	E	Pad size	min. 0.95 mm

The press-in zone of the AdvancedMC™ connector is tested according to Telcordia/Bellcore GR 1217CORE Part7. It is approved to be used with a plated through hole according IEC 60352-5 with a diameter of 0.55<sup>±0.05</sup> mm (drilled hole 0.64<sup>±0.01</sup> mm).

Based on our experiences regarding the production process of the PCB manufacturer we recommend a plated through hole configuration like shown in the above spreadsheet. To achieve the recommended plated through hole diameter, it is important to specify especially the drilled hole diameter of 0.64<sup>±0.01</sup> mm to your PCB supplier.

For drillings use e.g. drill bit # 72 (0.025" ≈ 0.64 mm).

	E	Pad size	min. 1.0 mm

The press-in zone of the MicroTCA™ power connector is tested according to Telcordia/Bellcore GR 1217CORE Part7. It is approved to be used with a plated through hole according IEC 60352-5 with a diameter of  $0.60^{+0.05}$  mm (drilled hole  $0.70^{+0.02}$  mm).

Based on our experiences regarding the production process of the PCB manufacturer we recommend a plated through hole configuration like shown in the above spreadsheet. To achieve the recommended plated through hole diameter, it is important to specify especially the drilled hole diameter of  $0.70^{+0.02}$  mm to your PCB supplier.

# Protection Block for MicroTCA™ backplanes

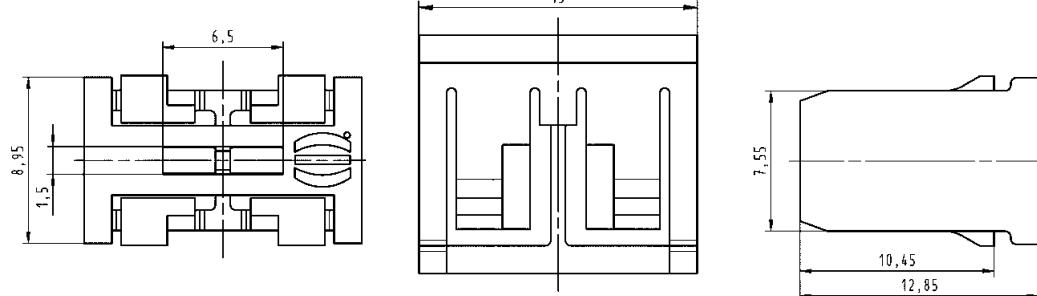

## Identification

MicroTCA™ Protection Block

## Part number

16 79 000 0010 000

The MicroTCA™ specification defines modules with the option of multiple mating interfaces like the MCH module for system management and switching. There are four different pitches defined for the module interfaces and the backplane connectors respectively, the basic unit is called horizontal pitch (HP) and is 5.08 mm (0.2 inch).

Compact-Size	3 HP	15.24 mm
Mid-Size	4 HP	20.32 mm
Full-Size	6 HP	30.48 mm
MCH	1.5 HP	7.62 mm

Any MCH (or other multiple mating interface modules) with more than two mating interfaces (2x MCH-pitch 1.5 HP = Compact-Size pitch 3 HP) could unintentional mate with connectors of the adjacent slot or could be plugged into the wrong slot. Even though the pin assignment and e-keying for the MCH is defined, it can cause system failures or even destroy hardware if a MCH is inserted into two adjacent AMC Compact-Size slots. For other multiple mating interface modules, this situation is even worse, because neither e-keying nor pin assignment is specified in MTCA.0.

MicroTCA™ backplane with protection blocks

To prevent errors in case of misinsertion, MTCA.0 R1.0 chapter 2.13 outlines protection blocks that occupy the space between two adjacent connectors in a Compact-Size slot. Furthermore this protection block can be used for keying functions of multiple mating interface modules.

HARTING designed a protection block fully independent of the backplane and sub rack design. The HARTING protection block is clipped between two connectors, hence no fixing features (holes, clips...) need to be designed into the backplane or the sub rack mechanics. The assembly is done quick and easy by hand. It can even be installed easily after the backplane is mounted with a simple flat-head screwdriver, an easy removal is possible in a similar way. The keying block can be placed into four different positions, hence a keying of multitonque modules by using tongues with a cutout is possible.

The free space between the backplane connectors is occupied by the protection block

## 13. Micro Card Edge Connectors

The HARTING Micro Card Edge Connector is available with 40 and 100 contacts at a pitch of 0.8 mm and suitable for telecommunications, medical and industrial high speed applications with data rates up to 14 Gbps.

### Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION						
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	high performance

## MICRO CARD EDGE CONNECTORS

HARTING offers the new Micro Card Edge Connector in surface-mounting technology for card gauges of 1.6 mm. It is suitable for board to board mezzanine as well as for small 'pluggable daughter card applications'. The key feature for mezzanine applications is the very flexible stacking height of parallel boards by utilizing a small board between the connectors. This gives flexibility in the mechanical design of the system.

The HARTING Micro Card Edge Connector is able to transfer data rates up to 14 Gbps, suitable for telecommunications, medical

and industrial high speed applications. It is available with 40 and 100 contacts at a pitch of 0.8 mm. An extremely smooth contact surface achieved by high performance stamping tools and a special after – treatment ensures low insertion forces and a high contact reliability.

HARTING's Micro Card Edge Connector offers excellent manufacturing features like a tape & reel packaging with a pick & place pad for nozzle in high volume productions.

## Specific features of the product range

High speed data transmission up to 14 Gbps between mezzanine or daughter card boards in telecom, medical, datacom and industrial applications.

Excellent manufacturing features for high volume production

- SMT termination
- Tape & reel packaging with pick & place pad for nozzle

Flexible stacking height of parallel boards by utilizing a small board between the connectors.

# Notes

Contact spacing	: 0.8 mm
Working current	: 1.7 A at 80 °C ambient
Test voltage	: 600 V AC
Mating cycles	: 200
Number of contacts	: 40, 100
Mating card thickness	: 1.6 + 0.1 mm
Operating temperature	: -55 °C ... +125 °C
Max processing temperature	: 230 °C for 60 sec. or 260 °C for 20 sec.
ROHS-compliance	: yes
Materials	
Mouldings	: LCP, glass-fibre filled, UL 94-V0

## 14. har-flex® Connectors

The continuous scalability by an even number of contacts, i.e. from 6 to 100, of the HARTING's har-flex® mezzanine connector series is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium- and small-scale volume range that is typical for the production of industrial devices.

### Application profile:

### har-flex® CONNECTORS

With *har-flex®*, HARTING has developed a general-purpose PCB connector series for internal and external Device Connectivity. The continuous scalability by an even number of contacts from 6 to 100 is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium and small scale volume range that is typical for the production of industrial devices.

This flexibility is new – HARTING turns an individual design into a standard component. No special tooling changes are needed for customer-specific solutions, thus HARTING can realize a short delivery time.

### PRODUCT DIVERSITY

The *har-flex®* product range is based on a 1.27 mm grid. With its diverse variants, HARTING provides connectivity solutions for many different board-to-board and cable-to-board applications. For example, two straight connectors are used for mezzanine applications, two angled connectors for extender cards on one level, and a combination of straight and angled connectors allows the well-known pairing of mother and daughtercards. By using individually tailored IDC flat cables, it is possible to bridge long PCB distances.

Smaller, more powerful and more robust at the same time is the credo in all areas on the way to I4.0. Due to the miniaturized design and the high variability of the *har-flex®* connectors, device manufacturers have a freely scalable connection technology that meets the requirements of miniaturization.

Cable-to-Board

Mother-to-Daughtercard

Extender-Card

Mezzanine

## Variable pole counts for highest flexibility

- Male and female connectors with even pole counts from 6 to 100 contacts available
- This flexibility in the choice of number of contacts combined with high density contact spacing allows for an optimal use of PCB space, thereby achieving overall space savings and cost efficiencies

## Flexible board-to-board distances

- Different stacking heights and a wiping length of 1.5 mm allow for (mezzanine) board-to-board distances from 8 to 20 mm

## High-quality contacts for a high number of mating cycles

- Polished Performance Level 1 (PL1) contacts ensure reliable connections for up to 500 mating cycles
- A gas test after the initial 250 of 500 mating cycles ensures high quality and long-term reliability

## Accurate mating process

- Mating profiles prevent mating in the opposite direction
- Slanted guidances compensate angle and center offsets and ensure a secure mating process

# Advantages of the product range

## Robust fixation on the PCB

- SMT and THR hold-downs allow for a robust mechanical fixation
- SMT hold-downs reduce the mechanical strain on the signal pins
- THR hold-downs are optionally available for strong protection against particularly high mechanical transverse forces

## Secure handling of cable connectors

- Vibration-proof catch mechanism on both sides prevents accidental loosening
- Optional strain relief protects the IDC contacts against pulling forces
- Customized cable assemblies provide perfectly fitting solutions

## Reliable soldering process

- A reliable soldering process is ensured by a contact coplanarity of  $\leq 0.1$  mm
- An optimal position on the PCB is achieved by guiding pegs

## Automated processing features

- Tape & reel packaging provides protection during shipping and handling
- SMT and THR versions are suitable for automatic pick & place assembly and reflow soldering

## Different types of cable

- Number of contacts: 6 - 100
- AWG 30/7
- Pitch: 0.635 mm
- Flame retardant acc. UL 758: VW-1
- Standard (PVC)      Operating temperature: -20 °C ... +105 °C
- Halogen free (TPE)      Operating temperature: -40 °C ... +125 °C

## Customised

We can add value with:

- Ferrit cores
- Shrinking tube
- Customised folding, customised labels

Your cable is not mentioned?

Don't be afraid. We will handle it. Please tell us your requirements.

Number of contacts	6, 8, 10 ... 96, 98, 100	Current carrying capacity acc. to IEC 60512-5-2 The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature. Control and test procedures according to DIN IEC 60512-5-2.

## Working voltage acc. to IEC 60664-1

The working voltage depends on user specific operational conditions. Depending on the installation category, the degree of pollution and the entire electrical environment, the working voltage is different. The standard IEC 60664-1 specifies, in general, the minimum insulation distances for equipment. But it can also be used to determine the maximum working voltage with given requirements.

The following table shows the most common conditions applicable for the har-flex® connectors and exemplary calculations for the working voltage. For installation category, degree of pollution and other requirements which are not shown in the table we refer to the IEC 60664-1.

Clearance / Creepage distance	0.4 mm			
CTI-Value	< 400			
Isolation group	III a/b			
Electrical field type	Case A (Inhomogeneous field)		Case B (Homogeneous field)	
Installation category	I	II	I	II
Degree of pollution	1	1	1	1
<b>Working voltage max.</b>	<b>150 V</b>	<b>100 V</b>	<b>150 V</b>	<b>150 V</b>

### Explanations:

- CTI value and isolation group are fixed values by the har-flex® connector characteristics.
- Installation category I: Equipment is intended for use only in appliances or installation parts, in which no overvoltages can occur. Equipment in this installation category is normally operated at extra low voltage.
- Installation category II: Equipment is intended for use in installations or parts of installations, in which lightning overvoltages need not be considered. Overvoltages caused by switching must be taken into account.
- Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
- Pollution degree 2: Only non-conductive pollution occurs. A temporary conductive caused by condensation must be expected occasionally.

## har-flex® with THR hold-downs

THR stands for "Through Hole Reflow", which appropriately describes the underlying technology. While SMT (i.e. "Surface Mount Technology") connections are created by soldering the connector on the PCB surface during the reflow soldering process, THR means that the hold-down pins are inserted and soldered into designated holes on the PCB. This combines the fully automatic reflow soldering process with the advantages of traditional wave soldering: the inserted hold-down pins make the har-flex® more stable mechanically and more resilient to shear forces. This is especially relevant for PCB connectors and particularly for applications that require blind mating - meaning that the connectors are hidden from view during the mating process, which increases the chance of high mechanical stresses on the contacts. The resulting risk is mitigated by using hold-downs (additional mechanical fixing features). The optionally available THR hold-downs increase the robustness and reliability and protect the SMT signal contacts, which is particularly useful for angled connectors mounted on daughtercards, for example.

## Partial loading

In specific cases it is possible that special requirements are not covered by the available standard variants. For example, it might be necessary to have a higher working voltage or allow for PCB traces under the connector. In such cases, it is possible to load the connector partially, i.e. leave out certain contact pins. By this means it is possible to increase the creepage and clearance distances and create free space for additional PCB tracks under the connector. HARTING offers the possibility to leave out one or several contacts in any position, which ensures a high degree of flexibility.

## Reliable contacting

The production of stamped contacts has been one of HARTING's core competencies for a long time. HARTING leveraged this experience to create reliable contacts for *harflex®*. To achieve this goal, both a high-quality contacting area and a suitable plating are crucial in order to maintain the contacting functionality of the contact over the course of its lifetime. The female contact is made with high precision, and a special polishing process ensures a defined contacting area, so that the contact point features a particularly high quality. In conjunction with the standard plating for performance level 1 this method guarantees a reliable electric connection for at least 500 mating cycles.

## Stacking heights for mezzanine applications

Straight male and female har-flex® variants are available in three different stacking heights each. In conjunction with a wiping length of 1.5 mm these har-flex® variants can cover PCB distances from 8 to 20 mm in mezzanine applications.

## Processing notes

The *har-flex®* SMT/THR connectors meet the highest demands in terms of their processing capabilities.

The connectors are delivered in a tape and reel packaging optimized for automatic assembly machines. A vacuum cover enables the automatic assembly with a vacuum nozzle.

The insulation body material is high temperature resistant, and due to the black colour a secure camera recognition is ensured.

To ensure a reliable reflow soldering process, the signal pins are 100 % checked for coplanarity.

## Process / Moisture Sensitivity

During the reflow solder process, the connector has to resist extreme variations in temperature. Connectors consist in general of both plastic and metal parts, which have a different behaviour during the solder process. The Process Sensitivity and also the Moisture Sensitivity are tested according the ECA/IPC/JEDEC J-STD-075 specification.

### Process Sensivity:

**PSL** means Process Sensitivity Level. PSL is a rating used to identify a component that is solder process sensitive. Damages of the connector after three times soldering are not permitted (e.g. melted edges).

### Moisture Sensitivity:

**MSL** means Moisture Sensitivity Level. MSL is a rating indicating a component's susceptibility to damage due to absorbed moisture during storage. Damages of the connector after storage in damp heat and three times soldering are not permitted (e.g. blisters).

The *har-flex®* connectors are rated with **PSL R0** and **MSL 1**. This is the maximum possible rating in both categories. The *har-flex®* connector resists three times soldering at the following conditions without damages:

- min. 150 s beyond 217 °C (liquidus temperature, the melting point of the solder paste)
- min. 30 s beyond classification temperature (240 °C / 245 °C for *har-flex®*)
- Temperature solder profile according to ECA/IPC/JEDEC J-STD-075
- For MSL test, a storage of 168 hours at 85 °C and 85 % rel. humidity was carried out

As the result, the *har-flex®* connectors are not process sensitive and not moisture sensitive according to ECA/IPC/JEDEC J-STD-075.

## Part number definition

The har-flex® part numbers have 14 digits and are based on the following scheme:

Male connectors, straight, SMT

Identification	No. of contacts	Part number	Dimensions in mm

Strain reliefs for female connectors,  
IDC

Identification	Drawing	Dimensions in mm
Dimensions		
6 – 58 contacts		
		
60 – 100 contacts		
		

Number of contacts	6, 8, 10 ... 96, 98, 100
Rated voltage	150 V
Core structure	AWG 30/7
Strain relief	with / without
Connector direction	same / different
Wiring	1 : 1 / crossed

## 15. *har-flexicon*<sup>®</sup> Connectors

*har-flexicon®* is the robust PCB termination technology for single wires. Components for the termination of industrial devices in the pitches of 1.27 mm, 2.54 mm, 3.50/3.81 mm, 5.00/5.08 mm and 10.16/15.00 mm

All components are particularly suited for reflow- and wave-soldering on the PCB and offer field assembly with PushIn, insulation displacement and screw termination for single wires.

### *Application profile:*

Connection Type		Environment		Application						
Board to Board	Cable/Wire to Board	IP20	IP65 / IP67	Data	Signal	Power	high performance			
							Data transfer rate	Shielding	Number of contacts, contact density	Voltage, working current
Cable termination				PCB termination				Application standard		
								Housing integration

### har-flexicon® CONNECTORS

Innovative device connectivity technology for all lifelines of industrial devices - it routes power, data and signals through the side of the device to the PCB.

HARTING *har-flexicon*® in the pitches 1.27 mm and 2.54 mm is the miniature SMD connector for the rapid connection of single wires and provides a perfect link between the periphery and PCBs in industrial devices. HARTING is thereby continuing along the path already taken with the *har-flex*® of rethinking and methodically optimizing device connectivity technology.

## RAPID CONNECTION OF INDIVIDUAL WIRES

*har-flexicon*® is very easy and quick to use for the smallest of designs. This, in conjunction with a precise cable manager, is what the IDC and the push-in spring-cage termination technology guarantees.

## ROBUST SMD DESIGN

The large-area SMT fixings of *har-flexicon*® provide a sturdy connection to the PCB. Insertion and withdrawal forces can be absorbed in order to take the pressure off solder contacts on the connection side.

## FULLY AUTOMATIC PROCESSING

The use of reflow and SMD-solderable components in automated mount and soldering processes simplifies, and hence optimizes, the production of PCBs.

## Material data

Group of insulation material	I
Type of insulation material	PA / PPA
Flammability rating per UL 94	V0
Operating temperature	-40 °C ... +110 °C
Contact material	copper alloy
Contact plating	tin plated
	UL approval (E 102079)

## Conductor and solder pin data

Pitch 10.16 mm

Pitch 15.00 mm

Connection technology wire	screw termination	screw termination
Conductor size solid / stranded	0.5 - 16 / 0.5 - 10 mm <sup>2</sup>	0.5 - 35 / 0.5 - 25 mm <sup>2</sup>
stranded with ferrules without / with plastic sleeve	0.5 - 6 / 0.5 - 6 mm <sup>2</sup>	0.5 - 16 / 0.5 - 16 mm <sup>2</sup>
Conductor size AWG	20 - 6	20 - 1
Screw thread	M4	M5
Tightening torque	1.2 - 1.5 Nm	2.1 - 2.5 Nm
Stripping length	11 mm	18 mm
Solder pin: drilled hole diameter	min. 1.5 mm	min. 1.6 mm

## 20. Tools

Basic element for a reliable connection is besides the quality of the connector the right choice of the assembly tool.

HARTING offers the corresponding tools to all connectors. On the following catalogue pages you find information about tools for crimp, press-in and IDC termination. There are tools available for different levels of automation. The choice varies from pure hand tools for small series or service up to fully automatic assembly tools for high volume series production.

# Tools for crimp contacts

## Tools for contacts **Han D®** (09 15 ...)

Identification	Part number	Drawing	Dimensions in mm
Insertion tool for crimp contacts	<b>09 99 000 0059</b>		For crimp contacts with wires of less than 0.75 mm <sup>2</sup> it is recommended that an insertion tool is used. Contacts should be inserted from the wiring side and pushed down until a positive locking is achieved.
Removal tool for crimp contacts			
Removal tool	<b>09 99 000 0012</b>		
Replacement-tip for removal tool	<b>09 99 000 0004</b>		
Removal tool	<b>09 99 000 0052</b>		A removal tool is necessary if contacts are to be replaced in the insert. It is inserted from the mating face and pushed over the contact until a stop is noticeable. Additional pressure unlocks the contact and pushes it out of the wiring side. In case of the removal tool (. . 0052) the unlocking process is achieved by pressure on the central rod.

## Tools for crimp contacts

### Tools for contacts Han E® (09 33 ...)

Identification	Part number	Drawing	Dimensions in mm
HARTING Service crimping tool with locator set for Han D®, Han E®	<b>09 99 000 0021</b>	Wire gauge Han E® 0.5 ... 2.5 mm <sup>2</sup>

<sup>1)</sup> For using changeable units 09 98 000 6901 / 6902  
the TK-M basic machine 09 98 000 6900 is required.

<sup>3)</sup> For using of tool head the basic unit CP 600 (09 99 000 0810)  
is required.

<sup>4)</sup> Only male contacts

<sup>5)</sup> For using changeable units 09 98 000 8101 - 8107  
the TC-SC basic machine 09 98 000 8000 is required.

<sup>6)</sup> depending on the wire

## Crimping machine TC-C01

### Features

- Basic unit in compact construction for pre-stripped wire
- Simple handling due to ergonomic design
- For individual, turned male and female contacts
- Selective processing of male and female HARTING contacts (wire gauge from 0.14 mm<sup>2</sup> to 10.0 mm<sup>2</sup>, AWG 26 to AWG 8)
- Automatic contact feed
- Reproducible, top quality gas-tight crimp connections
- Non-slip, anti-vibration adjustable feet for setting the height
- Low noise level
- Can be transported with carrying handle
- Removable electric and pneumatic supply connections
- Maintenance interval counter
- Minimal setup effort
- Crimping depth can be set without tools
- Low maintenance costs
- Low follow-up costs for maintenance and repair
- Easy replacement of wearing components

### Technical characteristics

Dimensions:	
Height	345 mm
Width	230 mm
Depth	400 mm
Total weight:	app. 24 kg
Local noise level:	62 dB (A)
Electrical connection:	230 V, 50 Hz
Power rating:	0.20 kW
Compressed air connection:	6 bar
Control system:	PLC
Work cycle trigger:	Footswitch
Machine work cycle:	1 second
Crimp type:	Four-point crimping
Contact feed:	Vibratory bowl feed
Stroke counters:	Resettable daily counter and permanent counter

## Crimping machine TC-C01

Identification	Part number	
Crimping machine TC-C01 for Han D® contacts Han E® contacts Han® C contacts	09 98 000 9001 09 98 000 9002 09 98 000 9003	

## Included in the delivery

## Options

- Crimping machine TC-C01
  - with 2.0 m connection cable and grounding plug
  - with 2.0 m pneumatic hose, quick-release coupling and N6 plug-in nipple
- Footswitch
- Carrying handle
- Operating instructions
- Declaration of conformity

### Pneumatic maintenance unit

Crimping machine TK-M

## Features

- Fast stripping and crimping in one operation
- Basic unit in compact construction
- Simple handling because of well-arranged construction with touchscreen controlling
- For individual, turned male and female contacts  
(for the HARTING series Han D®, Han E®)
- Selective processing of male and female contacts  
(Wire gauge from 0.14 mm<sup>2</sup> to 4.0 mm<sup>2</sup>, AWG 26 to AWG 12)
- Contact magazine with filling control
- Reproducible, top quality gas-tight crimp connections
- Infinitely variable adjustment parameters
  - Stripping depth
  - Stripping length
  - Crimping depth
  - Crimp contact feed rate
- Rotatable vibration feeder and actuator in basic unit
- Low noise level
- For oil-free compressed air
- Very low setup effort
- Low maintenance costs of the modular construction

## Technical characteristics

Dimensions:	
Height	580 mm
Width	470 mm
Depth	470 mm
Total weight:	Approx. 60 kg
Local noise level:	< 75 dB (A)
Drive:	Electro-pneumatic
Electrical connection:	230 V, 50 Hz
Power rating:	Approx. 0,75 kW
Pneumatic pressure:	6 bar
Compressed air connection:	3 dm <sup>3</sup> / work cycle
Control system:	PLC
Work cycle trigger:	Sensor
Machine work cycle:	1.5 seconds (stripping and crimping)
Crimp type:	Four-notch crimping
Contact feed:	Vibratory bowl feed
Stroke counters:	Resettable daily counter and quantity preselection

### Crimping machine TK-M

Identification	Part number
Crimping machine TK-M  (Basic machine without interchangeable unit)	09 98 000 6900
Interchangeable units for Han D® Han E®	09 98 000 6901 09 98 000 6902

### Pack contents

- Crimping machine TK-M
  - with one mounted interchangeable unit
  - with 2.0 m connection cable and grounding plug
  - with 2.0 m pneumatic hose with plug-in nipple N6
- Plug gauges for setting the crimping
- Centering bush for positioning the plug gauges
- Drawer for holding the contacts when the magazine is emptied
- Draw for insulation remains
- Tool set for setting
- 1 set of stripping blades
- Operating instructions
- Declaration of conformity

### Options

#### Interchangeable unit

Crimping machine TC-SC

## Features

- Fast stripping and crimping in one operation
- Basic unit in compact construction
- Simple handling because of well-arranged construction with touchscreen controlling
- For individual, turned male and female contacts  
(for the HARTING series Han D®, Han E®, Han® C, Han P®, Han-Yellock®, D-Sub)
- Selective processing of male and female contacts  
(Wire gauge from 0.14 mm<sup>2</sup> to 10.0 mm<sup>2</sup>, AWG 28 to AWG 8)
- Contact magazine with filling control
- Reproducible, top quality gas-tight crimp connections
- Motor-driven variable adjustment parameters
  - Stripping depth
  - Stripping length
  - Crimping depth
  - Wire position
- Infinitely variable adjustment parameters
  - Wire retention force
  - Crimp contact feed rate
- Low noise level
- For oil-free compressed air
- Very low setup effort
- Low maintenance costs of the modular construction

## Technical characteristics

Dimensions:	
Height	480 mm
Width	650 mm
Depth	560 mm
Total weight:	Approx. 75 kg
Local noise level:	< 75 dB (A)

## Crimping machine TC-SC

Identification	Part number	
Crimping machine TC-SC (Basic machine without interchangeable unit)	09 98 000 8000	
Interchangeable units for Han D® Han E® Han® C D-Sub D-Sub Han P® Han-Yellock®	09 98 000 8101 09 98 000 8102 09 98 000 8103 09 98 000 8104 09 98 000 8105 09 98 000 8106 09 98 000 8107	

## Pack contents

- Crimping machine TC-SC
  - with one mounted interchangeable unit
  - with 2.0 m connection cable and grounding plug
  - with 2.0 m pneumatic hose with plug-in nipple N6

## Options

### Interchangeable unit

- Tool set for adjustments
- 1 set of stripping blades
- Operating instructions
- Declaration of conformity

Crimping machine BK

## Features

- Fast stripping and crimping in one operating
- Simple handling by quick change tool and stripper
- For HARTING crimp contacts D-Sub
- Selectives processing of male and female contacts
- Wire gauges from 0.09 mm<sup>2</sup> up to 0.5 mm<sup>2</sup>, AWG 28 up to AWG 20
- Hand wheel for manual adjustments
- Maintenance-friendly through needle bearing rail
- Automatic exhaust of the isolation remainders
- Produces consistent high quality gas tight crimp connections
- With crimp force monitor
- Setting parameters with raster rotary button
  - Depth of insulation stripping
  - Length of insulation stripping
  - Crimping height on wire
  - Crimping height on insulation
  - Wire retainer position
  - Band thrust
  - Wire position in the crimp contact
- Non slip and anti-vibration feet
- Low noise level
- For unlubricated compressed air
- Low maintenance costs

## Technical characteristics

Dimensions	
Height	690 mm / 1400 mm with a contact reel
Width	420 mm
Depth	430 mm
Total weight	approx. 72 kg
Localized noise level	85 dB (A)
Drive	electro pneumatic
Power supply	230 V, 50/60 Hz, 2.5 A
Consumption	0.75 kW
Pneumatic pressure	6 bar
Control system	PLC
Stripping device	Typ 514
Suction apparatus	2000.0900.20
Work cycle trigger	Sensor
Work cycle	0.35 s.
Illumination	integrated tool light 20001326
Motor speed	440 –2000 rpm
Stroke counter	Daywise and fixed

## Crimping machine BK

Identification	Part number	
Crimping machine BK (without quick change tool)	09 98 000 5000	
Quick change tool for D-Sub (AWG 28-24) D-Sub (AWG 24-20) D-Sub high density (AWG 26-24)	09 98 000 3008 09 98 000 3009 09 98 000 3012	

## Pack contents

- Crimping machine BK
  - with role owner and guide plate
  - with 2.0 m connection cable and shockproof plug
  - with 2.0 m pneumatic hose with plug-in nipple N9
- Oiler bottle for the lubricating of the crimping contacts
- Tool set for setting
- 1 set of stamps for wire and isolation-crimp
- 1 anvil one-piece for wire and isolation-crimp
- 1 set of stripping blades
- 1 litre of contact oil
- Operating instructions
- Declaration of conformity

## Options

- V-Blades for special wires  
on request

# Tools for crimp contacts

## Tools for crimp termination – D-Sub-S, D-Sub-HD, DIN 41612

Identification	Part number	
<b>Service crimp tool</b> for single D-Sub <b>standard</b> contacts for single D-Sub <b>high density</b> contacts	09 99 000 0175  09 99 000 0535	 for standard contacts
		 for high density contacts
<b>HARTING-Crimp tool</b> for 500 bandoliered D-Sub <b>standard</b> contacts for 500 bandoliered D-Sub <b>high density</b> contacts	09 99 000 0169  09 99 000 0597	
<b>HARTING-Semi-automatic crimping device</b> Main drive foot-operated 220 V / 50 Hz  Crimping head for bandoliered D-Sub <b>standard</b> contacts  for <b>DIN 41612</b> contacts, types BC / har-bus® 64  FC 1 FC 2 FC 3  BC / har-bus® 64  Reel holder for 10 000 contacts	09 99 000 0246  09 99 000 0253  09 99 000 0252  09 99 000 0249 09 99 000 0250 09 99 000 0251  09 99 000 0628  09 99 000 0158	 0.09-0.56 mm² (AWG 28-20)    0.09 - 0.5 mm² 0.09 - 0.25 mm² 0.14 - 0.56 mm² 0.5 - 1.5 mm²  0.13 mm² (solid wire)  
<b>Insertion and removal tool</b> for single D-Sub <b>standard</b> contacts for single D-Sub <b>high density</b> contacts	09 99 000 0171  09 99 000 0513	 
		<p><b>Assembly of crimp contacts</b></p> <p>After crimping the stranded wire to the contact using a hand tool or automatic crimping device, insert the contact into the chamber with the tool, working from the wiring side. You will hear the contacts snap home and to check that they are securely in place, give the wire a gentle pull.</p> <p><b>Removing crimp contacts</b></p> <p>Position the tool from the wiring side as shown in the diagram below and insert into the contact chamber. The contact can then easily be removed from the wiring side together with the wire itself and reinserted in a different chamber. The tool is designed for a maximum insulation diameter of Ø 1.7 mm.</p>  <p>Stripping length: 2.5 + 0.5 mm</p>

# Crimp tools for screened hoods

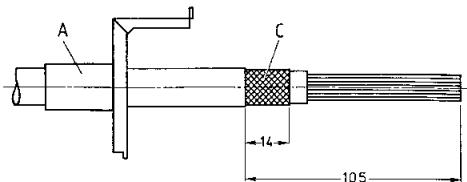

## Tool / Assembly instructions

Identification	No. of contacts	Part number	Drawing	Dimensions in mm
Crimp tool for screened hoods		09 99 000 0233		
Crimp tool dies	9 15 25 37	09 99 000 0235 09 99 000 0235 09 99 000 0236 09 99 000 0237		

### Assembly instructions for screened hoods

Place the metal screen part (A) on the cable.

Prepare the cable for termination.

Place the inner ferrule (B) between conductors and the outer braid (C).

Terminate the D-Sub connector.

Put the metal screen part (A) over the braid and crimp directly over the inner ferrule, ensuring that the correct crimp tool die is used.

Slide in the other metal screen part (D).

Push back the terminated connector into the assembled screen.

Put the assembled connector, screen and knurled screws into the thermoplastic hood and snap closed.

# Tools for press-in contacts

## Modular tooling system for starting connector press-in

The diversity of connector types with press-in terminations and varying termination styles make it necessary to have a simple, flexible tooling system that can be continuously updated.

The HARTING modular tooling system has significant advantages in terms of economic assembly of the many connector types with press-in terminations. The basic modules of the tooling system which will always be required are:

- Press
- Top tool
- Bottom tool
- Base plate

To increase automation and productivity the following modules may be added to the basic assembly:

- Guide frame with base plate for accurate positioning of the pcb up to a length of 600 mm
- Guide frame "Standard" for hand bench press and pneumatic press and pcb height of 123.5 up to 309.5 mm
- Guide frame "Long" for pneumatic press and pcb height of 123.5 up to 668.5 mm

# Tools for press-in contacts

## Handling indications

When setting up an assembly machine it is not necessary to set the working height of the press and adjust the base plate more than once. There is no need for further adjustments. All the other adaptations for various applications are performed efficiently and are reliant by various combinations of individual modules.

## Positioning the bottom tool in relation to the top tool

The ram of the HARTING press is generally provided with a cross-shaped groove which accurately positions the top tool in steps of 90°.

Two guide pins position the bottom tool in relation to the top tool simply and accurately.

**These guide pins cannot be used for positioning the pcb or the connector!**

Two pairs of pins on the base plate locate the bottom tool in relation to the top tool in steps of 90°.

## Height compensation

- Various overall heights of connectors are accommodated by type-specific top tools.
- Various pcb thicknesses are accommodated by the use of spacers between the bottom tool and base plate.

Base plate with pairs of location pins at 90°

# Tools for press-in contacts

## Handling indications

### Range of applications for the bottom tool

One bottom tool can be used to assemble connectors with straight or angled press-in terminations.

When pressing in the connectors with angled press-in terminations the positioning pins remain in the bottom tool and serve as guide pins for the connector.

By rotating the bottom tool in steps of 90° and relocating the positioning pins it is possible to assemble half-length connectors with angled press-in terminations.

### Bottom tool (narrow version)

In addition to the square bottom tool with multi-functional properties, HARTING offers the alternative of a narrow bottom tool for assembling connectors with straight press-in terminations. This tool supports the pcb within the press-in connector zone and therefore makes it possible to assemble connectors where electronic components are to be placed in close proximity.

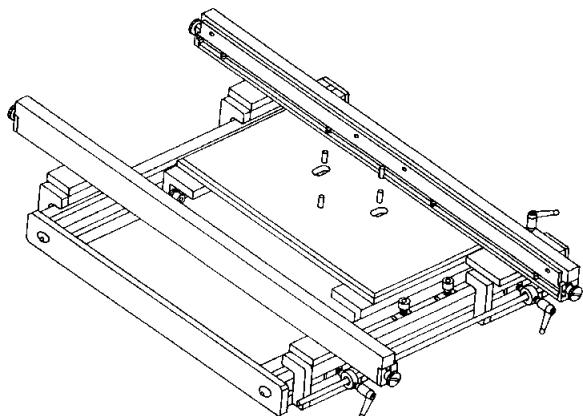

Bottom tool set for assembling connectors with angled pins

Bottom tool set for assembling half-length connectors with angled pins

Narrow version of the bottom tool for special applications

Guide frame for positioning the PCB in relation to the top and bottom tools

## Guide frame

The guide frame screwed to the base plate ensures the correct positioning of the PCB in relation to the top and bottom tools and permits a much higher rate of assembly.

Both guide rails are adjustable to accommodate various PCB sizes.

A spring-loaded supporting rail lifts the PCB away from the bottom tool after the press-in operation ensuring that no damage occurs to the conductors as it passes through the machine.

# Tools for press-in contacts

For a reliable and safe press-in process HARTING has developed a special tooling system. Each tooling is adapted to the special requirements of the individual connector range, thus a good handling and quick adjustment is guaranteed.

## Discrete tooling system – *harbus<sup>®</sup> HM*

For economical and safe press-in of *harbus<sup>®</sup> HM* connectors with 5+2 and 8+2 rows, HARTING has developed a discrete tooling system.

Due to its modular structure it can be adapted to any connector configuration that needs to be pressed-in extremely quickly and securely.

Therefore a top and a bottom tool for each connector style is available. These tools are inserted in a top or bottom carrier tool with a groove, thus guaranteeing exact position of the top and bottom tools and the connectors.

To use identical carrier tools for all connector configurations, HARTING offer spacer blocks to fill gaps between adjacent top or bottom tools.

The carrier tool is either completely filled with top or bottom tools or respective spacer blocks, making it possible to press-in single modules.

To press-in female connectors with pre-installed upper shields, separate top and bottom tools are available.

For lower shield press-in the tooling can be changed easily.

For further information please check our operating instructions or contact your HARTING representative.

# Tools for press-in contacts

## Tooling for backplanes – *harbus<sup>®</sup> HM*

For 6U backplanes with CompactPCI configuration, HARTING has developed this start-up tooling.

The basis is a top tool carrier with tooth inserts, that are engaged alternately.

Therefore this tooling assembly can be used without any additional set-up time.

The tooth inserts are interchangeable, so that the tooling can be used for other connector configurations as well as for CompactPCI.

The bottom tool should preferably be a loadnest, which carries and aligns the pcb.

For detailed information please contact your local HARTING representative.

③ Insert top tool for rotatable tool changer	on request		

# Tools for press-in contacts

## Insert blocks for male connectors – **harbus<sup>®</sup> HM**

The insert blocks can be used to press-in **harbus<sup>®</sup> HM** male connectors without any special top tool. These blocks will be put into the connectors manually or automatically.

To press-in the connector no precise position is needed and can be done by a simple flat rock die. This will accelerate the cycle time of the press-in process dramatically.

Insert blocks are developed for use with a loadnest.

Application samples  
for insert blocks

### Insert blocks for straight male connectors

## Discrete tooling system – **Mini Coax**

Straight Mini Coax connectors can be pressed-in with a flat die and a top tool delivered with the connectors. This top tool can be used as contact protection and remains in the connector until the daughtercard is mated.

Angled Mini Coax connectors will be pressed-in with separate top and bottom tools, which will be mounted into a common body.

## 31. Custom Device Connectivity

Individual device connectivity tailored to device versatility. When customized products are called for, you can always rely on HARTING.

HARTING offers a wide range of series products for data, signal and power. Most tasks are covered by a convincing solution from the standard range of board-to-board, cable-to-board or wire-to-board connectivity offered. In many instances, however, specific tasks call for the development of a connectivity solution that is tailored and attuned to specific devices. Requests range from color choices and labeling to stand-alone customer specific solutions.

We implement the connection technology and its customized integration into your devices. Our offerings include individual device connectivity and matching accessories such as cable assemblies and all the way through to complete connection boxes.

## CUSTOMER REQUIREMENTS

Highly qualified sales engineers record your requirements, and devise and explain initial solution approaches

## DESIGN AND DEVELOPMENT

In close coordination with customers, the inventive engineers at the HARTING Technology Group develop the Best Customer Solution

## PRESENTATION OF SOLUTION PROPOSALS

Presentation and discussion of the developed Device Connectivity concept

## PRODUCTION

Manufacturing of products to exacting quality standards

## DELIVERY

On-time delivery according to your delivery and packaging instructions

## FROM IDEAS TO THE BEST CUSTOMER SOLUTION

In cooperation with your product managers and development engineers, HARTING will generate the ideal connectivity solutions for your devices.

Project management encompasses all activities required for the reliable, cost-effective and on-time handling and execution.

An initial concept is created with the help of advanced, leading edge CAD technologies and inspected in terms of feasibility in specially equipped test workshops as well as by the accredited HARTING laboratory.

In order to attune solutions to production requirements, the tool construction, production and quality management departments contribute their expertise right from the outset.

## Production as competitive factor

### PRODUCTION OF DEVICE CONNECTIVITY:

Our products are backed by an additional, decisive competitive factor - namely the production process. HARTING production performance represents a consequent supplement to innovative product development. Divided according to technology areas, and operating with a high vertical range of manufacture, our state of the art production locations are based in Germany, England, Romania, USA and China. At HARTING, the entire range, from smallest production batches to large-scale automated production, is subject to consistent QC management.

### PUNCHED AND LATHED COMPONENTS:

Punching and lathing represent basic technologies used to produce contacts. Customer requirements such as special contact materials and dimensions can be implemented directly through our own production processes.

### INJECTION MOLDING:

Isolators of connectors and plastic housing are produced in an injection molding process. HARTING excels in the production of filigree isolators and the production of miniature precision parts. We develop, construct and produce micro precision injection molding tools along the limits of feasibility.

### ALUMINUM DIE-CASTING:

HARTING produces its Han® housings in an aluminum die-casting process. This technology forms the basis for robust metal housings for a wide range of different applications.

### OVERMOLDING AND ENCAPSULATING TECHNOLOGY:

HARTING offers overmolded cables and connectors for cable-to-board connectivity with degree of protection IP65 / IP67. Corresponding tools and production equipment for overmolding and encapsulating technologies are available at all our production locations.

## CABLE ASSEMBLY:

The cable assembly area produces cabling solutions with standard, hybrid or special cables.

We produce bus cables for Ethernet, Fieldbus systems as well as for special communication protocols.

We also assemble FOC cables on the basis of plastic, glass (monomode, gradient and grade index) or HCS fibers.

## PCB PRODUCTION:

We support innovative device configurations with PCB modules as connectivity interfaces. The offerings include solutions ranging from simple PCB adapters through to complex multilayer backplanes.

Based on the Global Footprint principle, HARTING is able to provide the same production expertise at our companies in the USA, in England and in China.

## PRODUCTION OF COMPLETE MODULES:

Our range of Device Connectivity offerings also covers the development and assembly of complete custom connection modules, with IP20 or IP65 / IP67 modules for data, signal and power applications tailored to suit the requirements of your specific devices. These connection modules combine our in-depth expertise and competencies in connection, PCB and housing technologies.

# Solution spectrum

## TAILORED PRODUCTS:

HARTING provides a convincing answer to each and every connectivity requirement – whether board-to-board, cable-to-board or wire-to-board applications. Our customers benefit from our capability of providing tailored solutions for all applications.

Customized connector concept

Ready-to-use pre-assembled connector with system cable

Connectivity module for installation in equipment or control cabinets

Decentralized electronic module

Decentralized electronic module with high degree of protection

Electrical engineering data .....	<b>40.02</b>
Termination technologies .....	<b>40.06</b>
IP protection levels .....	<b>40.16</b>

## General

The choice of device termination technology and connectors entails more than just considering factors such as functionality, the number of contacts, current and voltage ratings. It is equally important to take account of where the connectors are to be used and the prevailing ambient conditions. This in turn means that, dependent on the conditions under which they are to be installed and pursuant to the relevant standards, different voltage and current ratings may apply for the same connectors.

The most important influencing factors and the corresponding electrical characteristics of the associated connectors are illustrated here in greater detail.

## Overvoltage category

The overvoltage category is dependent on the mains voltage and the location at which the equipment is installed. It describes the maximum overvoltage resistance of a device in the event of a power supply system fault, e. g. in the event of a lightning strike.

The overvoltage category affects the dimensioning of components in that it determines the clearance air gap. Pursuant to the relevant standards, there are 4 overvoltage categories.

## Extract from IEC 60 664-1, Para. 2.2.2.1.1

**Equipment of overvoltage category I** is equipment for connection to circuits in which measures are taken to limit transient overvoltages to an appropriately low level.

**Note:** Examples are protected electronic circuits.

**Equipment of overvoltage category II** is energy-consuming equipment to be supplied from the fixed installation.

**Note:** Examples of such equipment are appliances, portable tools and other household equipment with similar loads.

If such equipment is subjected to special requirements with regard to reliability and availability, overvoltage category III applies.

**Equipment of overvoltage category III** is equipment in fixed installations and for cases where the reliability and the availability of the equipment is subject to special requirements.

**Note:** Examples of such equipment are switches in the fixed installation and equipment for industrial use with permanent connection to the fixed installation.

**Equipment of overvoltage category IV** is for use at the origin of the installation.

**Note:** Examples of such equipment are electricity meters and primary overcurrent protection equipment.

## Rated impulse voltages (Table 5 of DIN EN 61 984)

Nominal voltage of the supply system (= rated insulation voltage of equipment)					Preferred values for the rated impulse voltage kV (1.2/50 µs)			
					I	II	III	IV
Voltage line to earth derived from the nominal voltage of the supply system to the a. c. voltage (r. m. s. value) or d. c. voltage	AC voltage (r. m. s. value)	AC voltage (r. m. s. value)	AC voltage (r. m. s. value, d. c. voltage)	AC voltage (r. m. s. value, d. c. voltage)	Special protected levels	Level for electrical equipment (household and others)	Level for distribution supply systems	Input level
V	V	V	V	V				
100	66/115	66	60	—	0.5	0.8	1.5	2.5
150	120/208; 127/220	115; 120; 127	110; 120	220-110; 240-120	0.8	1.5	2.5	4
300	220/380; 230/400; 240/415; 260/440; 277/480	220; 230; 240; 260; 277	220	440-220	1.5	2.5	4	6
600	347/600; 380/660; 400/690; 415/720; 480/830	347; 380; 400; 415; 440; 480; 500; 577; 600	480	960-480	2.5	4	6	8

## Pollution degree

The dimensioning of operating equipment is dependent on environmental conditions. Any pollution or contamination may give rise to conductivity that, in combination with moisture, may affect the insulating properties of the surface on which it is deposited. The pollution degree influences the design of components in terms of the creepage distance.

The pollution degree is defined for exposed, unprotected insulation on the basis of environmental conditions.

**HARTING products for the device termination (connectors) are designed as standard for Pollution Degree 3.**

### Pollution degree 1

in air-conditioned or clean, dry rooms, such as computer and measuring instrument rooms, for example.

### Pollution degree 2

in residential, sales and other business premises, precision engineering workshops, laboratories, testing bays, rooms used for medical purposes. As a result of occasional moisture condensation, it is to be anticipated that pollution/contamination may be temporarily conductive.

### Pollution degree 3

in industrial, commercial and agricultural premises, unheated storage premises, workshops or boiler rooms, also for the electrical components of assembly or mounting equipment and machine tools.

### Pollution degree 4

in outdoor or exterior areas such as equipment mounted on the roofs of locomotives or trams.

## Extract from IEC 60 664-1, Para. 2.5.1

**Pollution degree 1:** No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

**Pollution degree 2:** Only non-conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be excepted.

**Pollution degree 3:** Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be excepted.

**Pollution degree 4:** The pollution generates persistent conductivity caused by conductive dust or by rain or snow.

## Special ruling for connectors

Subject to compliance with certain preconditions, the standard for device termination connectors permits a lower pollution degree than that which applies to the installation as a whole. This means that in a pollution degree 3 environment, connectors may be used which are electrically rated for pollution degree 2. The basis for this is contained in DIN EN 61 984, Para. 6.19.2.2.

## Extract from DIN EN 61 984, Para. 6.19.2.2

For a connector with a degree of protection IP54 or higher according to IEC 60 529 the insulating parts inside the enclosure may be dimensioned for a lower pollution degree.

This also applies to mated connectors where enclosure is ensured by the connector housing and which may only be disengaged for test and maintenance purposes.

The conditions fulfills,

- a connector which is protected to at least IP54 as per IEC 60 529,
- a connector which is installed in a housing and which as described in the standard is disconnected for testing and maintenance purposes only,
- a connector which is installed in a housing and which when disconnected is protected by a cap or cover to at least IP54,
- a connector located inside a switching cabinet to at least IP54.

These conditions do not extend to connectors which when disconnected remain exposed to the industrial atmosphere for an indefinite period.

It should be noted that pollution can affect a connector from the inside of an installation outwards.

Typical applications in which to choose pollution degree 2 connectors:

- A connector serving a drive motor which is disconnected only for the purpose of replacing a defective motor, even when the plant or system otherwise calls for pollution degree 3.
- Connectors serving a machine of modular design which are disconnected for transport purposes only and enable rapid erection and reliable commissioning. In transit, protective covers or adequate packing must be provided to ensure that the connectors are not affected by pollution/contamination.
- Connectors located inside a switching cabinet to IP54. In such cases, it is even possible to dispense with the IP54 housings of the connectors themselves.

## Specifying electrical data

Electrical data for connectors are specified as per DIN EN 61 984.

This example identifies a connector suitable for use in an unearthed power system or earthed delta circuit (see page 40.02, Table 5 of DIN EN 61 984):

16 A	400 V	6 kV	3
Working current			
Working voltage			
Rated impulse voltage			
Pollution degree			

This example identifies a connector suitable exclusively for use in earthed power systems (see page 40.02, Table 5 of DIN EN 61 984):

10 A	230/400 V	4 kV	3
Working current			
Working voltage conductor - ground			
Working voltage conductor - conductor			
Rated impulse voltage			
Pollution degree			

## Other terms explained

### Clearance air gap

The shortest distance through the air between two conductive elements (see IEC 60664-1, Para. 1.3.3). The air gaps are determined by the surge voltage withstand level.

### Creepage distance

Shortest distance on the surface of an insulating material between two conductive elements (see IEC 60664-1, Para. 1.3.3). The creepage distances are dependent on the rated voltage, the pollution degree and the characteristics of the insulating material.

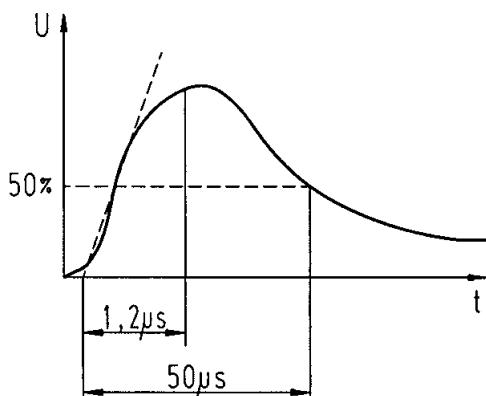

### Working voltage

Fixed voltage value on which operating and performance data are based. More than one value for rated voltage or rated voltage range may be specified for the same connector.

### Rated impulse voltage

The rated impulse voltage is determined on the basis of the overvoltage category and the nominal power supply voltage. This level in turn directly determines the test voltage for testing the overvoltage resistance of the connector (*Waveform voltage in 1.2/50 µs as per IEC 60 060-1*).

### Working current

Fixed current, preferably at an ambient temperature of 40 °C, which the connector can carry on a permanent basis (without interruption), passing simultaneously through all contacts which are in turn connected to the largest possible conductors, without exceeding the upper temperature limit.

The dependence of the rated current on ambient temperature is illustrated in the respective derating diagrams.

### Transient overvoltages

Short-term overvoltage lasting a few milliseconds or less, oscillatory or non-oscillatory, generally heavily damped (see IEC 60664-1, Para. 1.3.7.2). An overvoltage may occur as a result of switching activities, a defect or lightning surge, or may be intentionally created as a necessary function of the equipment or component.

### Power-frequency withstand voltage

A power-frequency overvoltage (50/60 Hz).

Applied for a duration of one minute when testing dielectric strength.

For test voltages in association with surge voltage withstand levels, see extract from Table 8, DIN EN 61 984.

### Test voltages (Extract from Table 8, DIN EN 61 984)

Impulse withstand voltage kV (1.2/50 µs)	RMS withstand voltage kV (50/60 Hz)
0.5	0.37
0.8	0.50
1.5	0.84
2.5	1.39
4	2.21
6	3.31
8	4.26
12	6.6

### CTI (Comparative Tracking Index)

This figure gives an indication of the conductivity of insulating materials and affects the specified creepage distances. The influence of the CTI value on the creepage distance is as follows: the higher the index value, the shorter the creepage distance. The CTI is used to divide plastics into insulation groups.

Breakdown of insulation groups:

- I       $600 \leq \text{CTI}$
- II      $400 \leq \text{CTI} < 600$
- IIIa    $175 \leq \text{CTI} < 400$
- IIIb    $100 \leq \text{CTI} < 175$

### Protection levels as per IEC 60 529

The protection level describes the leak-proof character of housing, e. g. for electrical equipment. It ranges from IP00 to IP68. HARTING heavy duty Han connectors feature a standard protection level of IP65 (see page 40.16, table based on DIN VDE 0470, DIN EN 60 529, IEC 60 529).

### Derating diagram as per DIN IEC 60 512

These diagrams are used to illustrate the maximum current carrying capacity of components. The illustration follows a curve which shows the current in relation to ambient temperature. Current carrying capacity is limited by the thermal characteristics of contacts and insulating elements which have an upper temperature limit which should not be exceeded.

# Current carrying capacity

## Current carrying capacity

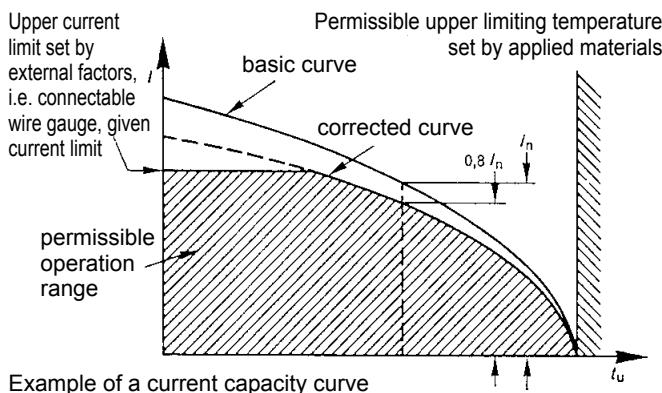

The current carrying capacity is determined in tests which are conducted on the basis of the DIN IEC 60 512 part 5. The current carrying capacity is limited by the thermal properties of materials which are used for inserts as well as by the insulating materials. These components have a limiting temperature which should not be exceeded.

The relationship between the current, the temperature rise (loss at the contact resistance) and the ambient temperature of the connector is represented by a curve. On a linear co-ordinate system the current lies on the vertical line (ordinate) and the ambient temperature on the horizontal line (abscissa) which ends at the upper limiting temperature.

In another measurement the self-heating ( $\Delta t$ ) at different currents is determined.

At least 3 points are determined which are connected to a parabolic curve, the basic curve.

The corrected current carrying capacity curve is derived from this basic curve. The reasons for the correction are external factors that bring an additional limitation to the current carrying capacity, i.e. connectable wire gauge or an unequal dispersion of current.

Example of a current capacity curve

Definition: The rated current is the continuous, not interrupted current a connector can take when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Example of a current carrying curve

Acc. to IEC 61984 the sum of ambient temperature and the temperature rise of a connector shall not exceed the upper limiting temperature. The limiting temperature is valid for a complete connector, that means insert plus housing.

As a result the insert gives the limit for the temperature of a complete connector and thus housings as well.

In practice it is not usual to load all terminals simultaneously with the maximum current. In such a case one contact can be loaded with a higher current as permitted by the current capacity curve, if less than 20 % of the whole is loaded.

However, for these cases there are no universal rules. The limits have to be determined individually from case to case. It is recommended to proceed in accordance with the relevant rules of the DIN IEC 60 512 part 5.

## Current carrying capacity of copper wires

Diameter [mm <sup>2</sup> ] of single wires in a three-phase system	0.75	1	1.5	2.5	4	6	10	16	25	35
Type of installation										
B1 Wires in protective tubes and installation conduits	7.6	10.4	13.5	18.3	25	32	44	60	77	97
B2 Cables and wires in protective tubes and installation conduits	—	9.6	12	16.5	23	29	40	53	67	83
C Cables and wires at walls	—	11.7	15.2	21	28	36	50	66	84	104
D Cables and wires on a bed	—	11.5	16.1	22	30	37	52	70	88	114
Depiction in accordance with DIN EN 60 204 for PVC-insulated copper wires in an ambient temperature of + 40 °C under permanent operating conditions.										
For different conditions and temperatures, installations, insulation materials or conductors the relevant corrections have to be carried out.										

# Terminations

Solder pins for printed circuit boards	
Solder pins for reflow soldering	
Solder lugs for discrete wiring	
Press-in technology for printed circuit boards	
Crimp contacts for flexible wiring, selective loading and ease of replacement	
Insulation displacement contacts for mass termination of flat cable or round cable	
Faston blades for higher power discrete wiring	

# Terminations

## Screw terminal

Screw terminals meet VDE 0609 / EN 60 999. Dimensions and tightening torques for testing are shown opposite.

The relevant regulations state that in the case of

- Terminals with wire protection.  
– the use of ferrules is not necessary

## Axial screw terminal

This termination associates the benefits of screw and crimp terminals.

- Less space required
- Easy handling
- No special tools

The axial screw termination is suitable for fine strands wires.

## Cage-clamp terminal

This termination method requires very little preparation of the wire and no special tools, leading to a low installed cost and a high degree of mechanical security.

- For all stranded and solid wires with a cross section 0.14 to 2.5 mm<sup>2</sup>.
- Ease of termination. Conductor and screwdriver are in same plane.
- No special preparation of stripped conductor.
- The larger the conductor the higher the clamping force.
- The termination is vibration-proof.
- Guaranteed constant low resistance connection of the cage-clamp terminal.
- The cage-clamp system is internationally approved. VDE, SEV, CSA, UL, ÖVE, SEMKO, LCIE (France), Germanischer Lloyd, DET Norske Veritas

## Solder connection

The term "soldering" is defined in DIN 8505:

"Soldering is a method of connecting metallic materials using an additional melting metal, if necessary with the assistance of a flux and/or protective gas. The melting temperature of the solder must lie beneath the minimum melting temperature of the base metals being connected. These base metals shall be tinned without melting themselves."

Soft solders commonly used on electronic equipment are to DIN 1707-100. Today's lead free solders have a melting range between 217 °C and 227 °C depending on the composition of the alloy. For soldering metallic materials the flux is defined in DIN EN 29454-1. Tests are explained in DIN 8526.

## Screw dimensions and tightening torque for screw terminals

Wire gauge (mm <sup>2</sup> )	1.5	2.5	4	6	10	16
Screw thread	M 3	M 3	M 3.5	M 4	M 4	M 6
Test moment of torque (Nm)	0.5	0.5	0.8	1.2	1.2	1.2*
min. pull-out for stranded wire (N)	40	50	60	80	90	100

\* for screws without heads (Han® K 4/8)

with wire protection

## Remarks on the axial screw technique

The wire gauges mentioned in the catalogue refer to geometric wire gauges of cables.

### Background:

According to DIN VDE 0295 for cables and insulated wires the wire gauge will be determined by conductance ( $\Omega/\text{km}$ ) and maximum wire diameter. A minimum cable diameter is not specified! (Example: nominal wire gauge 95 mm<sup>2</sup> → real, geometric wire gauge 89 mm<sup>2</sup>)

### Recommendation:

The use of cables with extreme geometric wire gauge deviation should be checked separately with the use of the axial screw termination.

## One conductor per termination

## Slot for screwdriver

Solderless termination for connectors has proven to be reliable for decades. Today the use of press-in connectors encompasses all fields of electrical and electronical applications.

Pressing of electrical components, mainly connectors, is characterised through the matching of the connector pin and the plated through hole of the PCB. Whereas the desired electrical characteristics can be attained relatively independent from the design of the press-in zone, the mechanical characteristics of the press-in zone are crucial for the reliable assembly of connectors where PCB's have different surfaces.

Although the scope of requirements at the press-in process is generally defined in time-tested specifications, the novel press-in zones should offer an optimal handling and a reliable termination. Essentially, this is guaranteed through the design of the press-in zone and the meticulous observance of tolerances. HARTING has been using FEM simulations for the calculation and optimisation of press-in zones for a long period of time. This expertise allows us to simulate various PCB configurations very accurate.

Due to the high deformation resistance and resilience of **harpresso** contacts, they can be easily and repeatedly removed in case of repairs without impairment to their functioning.

**harpresso** is extremely versatile and offers a reliable electrical contact, therefore it is especially well suited for applications with these surfaces.

Please contact us for detailed test reports.

### Benefits of the press-in technology

- Thermal shocks associated with the soldering process and the risk of the board malfunction are avoided.
- No need for the subsequent cleaning of the assembled PCB's
- Additional wrap connections are made possible by using connectors with long pins
- Unlimited and efficient processing of partially gold-plated pins for rear I/O - manual soldering is no longer necessary!

bus board with press-in connectors

FEM simulation  
of the needle eye  
press-in zone

Board with press-in connectors

The processing of press-in connectors can be divided into 3 phases, containing both mechanical and metallurgical operations:

#### 1. Centering and placing of the termination pins

The centering of connectors before pressing is important in order to prevent damage to the pcb and the termination pins. Centering can be omitted when connectors are pressed using a flat rock die.

HARTING offers insert blocks for male connectors to make the centering of connectors unnecessary.

#### 2. Pressing in the pins

In the press-in process the insertion force is continuously transformed into compression force. The resulting friction frees the contacting bars of insulating films. Superfluous plating (tin) is transferred within the plated through hole. A gas-tight connection of fresh non-oxidised metal surfaces is obtained.

#### 3. Obtaining the final position

The press-in operation should be terminated as soon as the connector obtains its final position on the pcb to avoid unnecessary compressive stress. The press-in machines of HARTING feature automatic termination of the press-in operation independant of pcb thickness and surface properties.

The entire dynamic press-in process is characterised through changes of the press-in force that can be statistically evaluated. HARTING records the changes of force with the help of special software. This is an important step towards permanent process control and documented manufacturing data.

The **harpresso**-zone is based on the industry renowned needle eye technology. Its special design allows for compensation of tolerances of pcb surface properties (eg. superfluous tin plating). The excessive material is displaced within the plated through hole, whereby a gas-tight and corrosion resistant electrical connection is assured.

Phase 1

Phase 2

Phase 3

# Recommended configuration of plated through holes

## Recommended configuration of plated through holes

In addition to the hot-air-level (HAL) other pcb surfaces are getting more important. Due to their different properties, such as mechanical strength and coefficient of friction we recommend the following configuration of pcb through holes.

<i>Tin-lead plated PCB (HAL) acc. EN 60 352-5</i>	Hole-Ø	$1.15^{\pm 0.025}$ mm
	Cu	min. 25 µm
	Sn	max. 15 µm
	Plated hole-Ø	0.94-1.09 mm

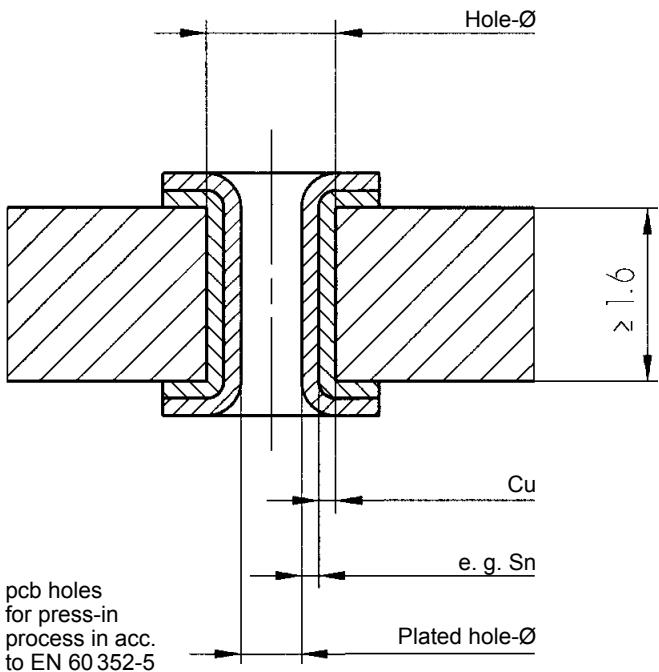

<i>Chemical tin-plated PCB</i>	Hole-Ø	$1.15^{\pm 0.025}$ mm
	Cu	min. 25 µm
	Sn	min. 0.8 µm
	Plated hole-Ø	1.00-1.10 mm

<i>Au / Ni plated PCB</i>	Hole-Ø	$1.15^{\pm 0.025}$ mm
	Cu	min. 25 µm
	Ni	3-7 µm
	Au	0.05-0.12 µm
	Plated hole-Ø	1.00-1.10 mm

<i>Silver plated PCB</i>	Hole-Ø	$1.15^{\pm 0.025}$ mm
	Cu	min. 25 µm
	Ag	0.1-0.3 µm
	Plated hole-Ø	1.00-1.10 mm

<i>OSP copper plated PCB</i>	Hole-Ø	$1.15^{\pm 0.025}$ mm
	Cu	min. 25 µm
	Plated hole-Ø	1.00-1.10 mm

PCB board thickness:  $\geq 1.6$  mm

## Quality control of the press-in termination

The press-in force correlates with the diameter of the plated through hole and with the friction coefficient of the surface; therefore it can be used for a continuous monitoring of the process.

The retention force, as an indirect measure of the normal force, serves to qualify the process or random tests

Typical press-in and retention forces for the D-Sub press-in zone

The automatic press-in machines of HARTING feature a graphical user interface for monitoring the process and the quality of the press-in termination (see chapter 20).

HARTING assists you with the most advanced quality assurance methods beyond the usual scope.

X-ray photo of a pressed-in connector

The continuing trend towards miniaturisation has revolutionised the assembly of electronic components. For the past 15 years, most components have been secured directly to the pcb surface by means of Surface Mount Technology (SMT). By dispensing with drilled holes on the pcb, a space saving of up to 70 percent is achieved.

Today, typical components such as resistors, ICs, capacitors, and connectors with straight terminal pins are almost exclusively fitted using SMD (Surface Mount Device) technology in mass production. In contrast, angled SMD connectors at the edge of the board have not been successful because of tolerance problems (co-planarity) and stresses during mating. Modified solder connectors for assembly with „Pin in Hole Intrusive Reflow“ process offer a better solution. These can be mounted at low cost, utilising existing SMD production lines.

SMT board with connector for „Pin in Hole Intrusive Reflow“ assembly

## “Pin in Hole Intrusive Reflow“

In this process, the connector is inserted into plated through holes in a comparable way to conventional component mounting. All other components can be assembled on the pcb surface.

The components are positioned using pick-and-place machines. These automatic assembly machines differ according to whether the components are small, lightweight or bulky. Connectors are considered bulky (odd form) because of their comparatively heavy

weight and large volume which makes them more difficult to grip. Furthermore, machines for odd form components must have higher insertion power to fit the components into pcb holes, which are filled with solder paste. As a rule, modern SMC production lines are equipped with both types of machine, therefore the „Pin in Hole Intrusive Reflow“ process generally entails no extra investment costs for the user.

### Conventional assembly process:

1. Application of solder paste
2. Positioning the components
3. Positioning odd form components
4. Reflow soldering

## Application of solder paste

Before the components are assembled, solder paste must be applied to all the solder pads (for connecting surface-mount components) and the plated through contacts (pcb holes for „Pin in Hole Intrusive Reflow“ insertion). Usually a screen printing process is used for this purpose. A squeegee moves across the pcb, which is masked with screens and presses the solder paste into all unmasked areas. To ensure that the plated through holes are completely filled, significantly more solder paste must be applied than traditional solder pads on the pcb surface. The required quantity can be set exactly via several parameters.

As an alternative to screen printing, the solder paste can be applied by means of a dispenser. A high-precision robot moves the dispenser to all required positions on the pcb. The dispensing method is particularly suitable for small pcb's or applications which demand high precision and flexibility in dispensing volumes.

Dispenser in operation

## Requirements for the solder connection

There are numerous scientific studies dealing with calculation of the required quantity of solder paste. These studies use various parameters, e.g. the shrinking factor of the paste during soldering or the thickness of the screens used for masking the pcb. Since such calculation methods are complicated to apply, the following rule of thumb has proved valuable in practice:

$$V_{\text{Paste}} = 2(V_H - V_P)$$

in which:

$V_{\text{Paste}}$  = Required volume of solder paste

$V_H$  = Volume of the plated through hole

$V_P$  = Volume of the connector termination  
in the hole

Comment: the multiplier „2“ compensates for solder paste shrinkage during soldering. For this purpose, it was assumed that 50 % of the paste consists of the actual solder, the other 50 % being soldering aids.

At the beginning of a new production batch, the process parameters, such as quantity of solder paste and soldering temperature, can be set by interpreting simple cross-sections of the soldered connection. A reliable measure for achieving optimum parameters is the quantity of solder required to fill the hole. In soldered connections of high quality, the holes are filled to between 75 % and 100 %.

Plated through hole with connector termination

# Requirements for SMC connectors

## SMC connectors

SMC (Surface Mount Compatible) connectors have to withstand temperatures of up to 225°C in the reflow oven for 10 to 15 seconds. Therefore, the moulding must be made from a dimensionally stable plastic which expands at the same rate as the pcb material when subjected to heat.

The length of the connector contacts should be such that they protrude by no more than 1.5 millimetres after insertion to the pcb. Each contact collects solder on its tip as it penetrates the solder paste in the hole. So if the contact was too long, this solder would no longer be able to reflow back into the plated through hole by capillary action during the soldering process, therefore the quality of the soldered connection would suffer as a result.

Connector design must permit both automatic assembly with pick-and-place machines and manual positioning for test and pre-production batches. It is also important for the packaging of the connectors to be suitable for automated assembly. Experience shows that deep-drawn film and reel packaging fed into the pick-and-place machines with the aid of a conveyor system is particularly suitable.

### Advantages for using SMC connectors are:

- Partial dip soldering or press-in is no longer required
- High mechanical stability
- Complete compatibility with Surface Mount Technology
- Savings through integration into the automated assembly process
- Reduced floor space in the production plant

HARTING connector mounted in a tape ready for automatic placement.

## HARTING SMC technology

HARTING offers its customers a complete system concept for integrating SMC technology into existing production lines. We manufacture a wide range of SMC connectors (3 and 5 row) in compliance with IEC 60603-2 and D-Sub connectors in compliance with IEC 60807. In addition, HARTING supports the market with packaging and processing concepts, which have been developed in collaboration with renowned manufacturers of SMC soldering and assembly plants.

### Advantages of the „Pin in Hole Intrusive Reflow“ process:

- Partial dip soldering or press fitting is no longer required
- Complete compatibility with Surface Mount Technology
- Complete integration into the automated assembly process
- Reduced floor space in the production plant
- As a rule, no additional investment costs

HARTING connector mounted in a tape ready for placement using an odd form assembly station.

## Crimp connection

A perfect crimp connection is gastight, therefore corrosion free and amounts to a cold weld of the parts being connected. For this reason, major features in achieving high quality crimp connections are the design of the contact crimping parts and of course the crimping tool itself. Wires to be connected must be carefully matched with the correct size of crimp contacts. If these basic requirements are met, users will be assured of highly reliable connections with low contact resistance and high resistance to corrosive attack.

The economic and technical advantages are:

- Constant contact resistance as a result of precisely repeated crimp connection quality
- Corrosion free connections as a result of cold weld action
- Pre-preparation of cable forms with crimp contacts fitted
- Optimum cost cable connection

Requirements for crimp connectors are laid down in DIN IEC 60 352-2, Amend. 2, as illustrated in the table.

## Pull out force of stranded wire

The main criterion by which to judge the quality of a crimp connection is the retention force achieved by the wire conductor in the terminal section of the contact. DIN IEC 60 352, part 2, defines the extraction force in relation to the cross-section of the conductor.

When fitted using HARTING crimping tools and subject to their utilization in an approved manner, our crimp connectors comply with the required extraction forces.

## Crimping tools

Crimping tools (hand operated or automatic) are carefully designed to produce with high pressure forming parts a symmetrical connection of the crimping part of the contact and the wire being connected with the minimum increase in size at the connection point. The positioner automatically locates the crimp and wire at the correct point in the tool.

A ratchet in the tool performs 2 functions:

It prevents insertion of the crimp into the tool for crimping before the jaws are fully open

It prevents the tool being opened before the crimping action is completed

Identical, perfectly formed, connections can be produced using this crimping system.

## Crimp-cross section

B shape cross section stamped contact

H shape cross section turned contact

4 points shape cross section turned contact

## Tensile strength of crimped connections

Conductor cross-section		Tensile strength

Extract from DIN IEC 60 352-2, Amend. 2, Table IV

# Hoods/housings connector insert protection

The connector's housing, sealing and locking mechanism protect the connection from external influences such as mechanical shocks, foreign bodies, humidity, dust, water or other fluids such as cleansing and cooling agents, oils, etc. The degree of protection the housing offers is explained in the IEC 60 529, DIN EN 60 529, standards that categorize enclosures according to foreign body and water protection.

The following table shows the different degrees of protection.

Code letters (International Protection)		First Index Figure (Foreign bodies protection)	Second Index Figure (Water protection)
	IP	6	5
Index figure		Degree of protection	
<b>0</b>	No protection		No protection against accidental contact, no protection against solid foreign bodies
<b>1</b>	Protection against large foreign bodies		Protection against contact with any large area by hand and against large solid foreign bodies with $\varnothing > 50 \text{ mm}$
<b>2</b>	Protection against medium sized foreign bodies		Protection against contact with the fingers, protection against solid foreign bodies with $\varnothing > 12 \text{ mm}$
<b>3</b>	Protection against small solid foreign bodies		Protection against tools, wires or similar objects with $\varnothing > 2.5 \text{ mm}$ , protection against small foreign solid bodies with $\varnothing > 2.5 \text{ mm}$
<b>4</b>	Protection against grain-shaped foreign bodies		As 3 however $\varnothing > 1 \text{ mm}$
<b>5</b>	Protection against injurious deposits of dust		Full protection against contact. Protection against interior injurious dust deposits
<b>6</b>	Protection against ingress of dust		Total protection against contact. Protection against penetration of dust
		<b>7</b>	Protected against immersion
		<b>8</b>	Water-tight

Description according to DIN EN 60 529, IEC 60 529
