### SY89473U

# Precision LVPECL 2:1 Multiplexer with 1:2 Fanout and Internal Termination

### **General Description**

The SY89473U is a 2.5V/3.3V precision, high-speed 2:1 differential MUX capable of processing clocks up to 2.5GHz and data up to 2.5Gbps.

The differential input includes Micrel's unique, 3-pin input termination architecture that directly interfaces to any differential signal (AC- or DC-coupled) as small as 100mV ( $200\text{mV}_{PP}$ ) without any level shifting or termination resistor networks in the signal path. The output is 800mV, 100K-compatible, LVPECL with fast rise/fall times guaranteed to be less than 190ps.

The SY89473U operates from a 2.5V  $\pm 5\%$  or 3.3V  $\pm 10\%$  supply and is guaranteed over the full industrial temperature range of  $-40^{\circ}$ C to  $+85^{\circ}$ C. The SY89473U is part of Micrel's high-speed, Precision Edge<sup>®</sup> product line. For multiple-clock switchover solutions, please refer to the SY89840–SY89843U family.

All support documentation can be found on Micrel's web site at: www.micrel.com.

### **Functional Block Diagram**

United States Patent No. RE44,134
Precision Edge is a registered trademark of Micrel, Inc.

#### **Features**

- Selects between two input channels and provides two copies of the selected output
- Guaranteed AC performance over temperature and supply voltage:
  - DC to 2.5Gbps data throughput
  - DC to 2.5GHz f<sub>MAX</sub> (clock)
  - <500ps In-to-Out t<sub>pd</sub>
  - $< 190 ps t_r/t_f$
  - <20ps Output-to-output skew
- Unique patented input isolation design minimizes crosstalk
- Ultra-low Jitter Design:
  - <1ps<sub>RMS</sub> random jitter
  - <1ps<sub>RMS</sub> cycle-to-cycle jitter
  - <10ps<sub>PP</sub> total jitter (clock)
  - < 0.7ps<sub>RMS</sub> crosstalk induced jitter
- Unique patent-pending input termination and VT pin accepts DC- and AC-coupled inputs (CML, PECL, LVDS)
- 800mV (100K) LVPECL output swing
- 2.5V ±5% or 3.3V ±10% supply voltage
- -40°C to +85°C industrial temperature range
- Available in 24-pin (4mm x 4mm) QFN package

### **Applications**

- · Clock switchover
- Data distribution

#### Markets

- LAN/WAN
- Enterprise servers
- ATE
- Test and measurement

# Ordering Information<sup>(1)</sup>

Part Number	Package Type	Operating Range		
SY89473UMG	QFN-24	Industrial	473U with Pb-Free bar-line indicator	NiPdAu Pb-Free
SY89473UMGTR <sup>(2)</sup>	QFN-24	Industrial	473U with Pb-Free bar-line indicator	NiPdAu Pb-Free

#### Notes:

- 1. Contact factory for die availability. Dice are guaranteed at  $T_A$  = 25°C, DC Electricals Only.
- 2. Tape and Reel.

# **Pin Configuration**

24-Pin QFN

# **Pin Description**

Pin Number	Pin Name	Pin Function		
5, 2, 23, 20	INO, /INO IN1, /IN1	Differential Inputs: These input pairs are the differential signal inputs to the device. They accept AC or DC-coupled signals as small as 100mV (200mV <sub>PP</sub> ). Note that these inputs will default to an indeterminate state if left open. Each pin of a pair internally terminates to a VT pin through $50\Omega$ . Please refer to the "Input Interface Applications" section for more details.		
3, 21	VREF-AC0, VREF-AC1	Reference Voltage: These outputs bias to $V_{CC}$ -1.2V. They are used for AC-coupling inputs IN and /IN. Connect VREF-AC directly to the corresponding VT pin. Bypass with 0.01µF low ESR capacitor to VCC. Maximum sink/source current is $\pm 1.5$ mA. Due to the limited drive capability, the VREF-AC pin is only intended to drive its respective VT pin. Please refer to the "Input Interface Applications" section for more details.		
4, 22	VT0 <sub>,</sub> VT1	Input Termination Center-Tap: Each side of the differential input pair terminates to a VT pin. The VT0 and VT1 pins provide a center-tap to a termination network for maximum interface flexibility. Please refer to the "Input Interface Applications" section for more details.		
1, 6, 9, 10, 13, 19, 24	VCC	Positive Power Supply: Connect to +2.5V or +3.3V power supply. Bypass with 0.1µF//0.01µF low ESR capacitors as close to VCC pins as possible.		
7, 8 11, 12	Q0, /Q0 Q1, /Q1	Differential Outputs: These differential LVPECL output pairs are a logic function of the IN0, IN1, and SEL inputs. Please refer to the truth table below for details. Unused output pairs can be left floating with no impact on jitter.		
15	SEL	This single-ended TTL/CMOS-compatible input selects the inputs to the multiplexer. Note that this input is internally connected to a $25k\Omega$ pull-up resistor and will default to a logic HIGH state if left open. $V_{TH} = V_{CC}/2$ . Please refer to the "Timing Diagram" section for more details.		
14, 17, 18	GND, Exposed Pad	Ground: Ground pins and exposed pad must be connected to the same ground plane.

V <sub>REF-AC</sub>	Output Reference Voltage		V <sub>CC</sub> -1.3	V <sub>CC</sub> -1.2	V <sub>CC</sub> -1.1	V

#### Notes:

- 1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
- 2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
- Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.  $\theta_{JA}$  and  $\Psi_{JB}$ values are determined for a 4-layer board in still air unless otherwise stated.
- 4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
- 5.  $V_{IN}$  (max) is specified when  $V_T$  is floating.

# LVPECL Outputs DC Electrical Characteristics<sup>(6)</sup>

 $V_{CC}$  = 2.5V ±5% or 3.3V ±10%;  $T_A$  = -40°C to + 85°C;  $R_L$  = 50 $\Omega$  to  $V_{CC}$ -2V, unless otherwise stated.

Symbol	Parameter	Condition	Min	Тур	Max	Units
V <sub>OH</sub>	Output HIGH Voltage Q, /Q		V <sub>CC</sub> -1.145		V <sub>CC</sub> -0.895	V
V <sub>OL</sub>	Output LOW Voltage Q, /Q		V <sub>CC</sub> -1.945		V <sub>CC</sub> -1.695	V
V <sub>OUT</sub>	Output Voltage Swing Q, /Q	See Figure 1a.	550	800		mV
$V_{DIFF\text{-}OUT}$	Differential Output Voltage Swing Q, /Q	See Figure 1b.	1100	1600		mV

# LVTTL/CMOS DC Electrical Characteristics<sup>(6)</sup>

 $V_{CC}$  = 2.5V ±5% or 3.3V ±10%;  $T_A$  = -40°C to + 85°C, unless otherwise stated.

Symbol	Parameter	Condition	Min	Тур	Max	Units
V <sub>IH</sub>	Input HIGH Voltage		2.0			V
V <sub>IL</sub>	Input LOW Voltage				0.8	V
I <sub>IH</sub>	Input HIGH Current		-125		30	μA
I <sub>IL</sub>	Input LOW Current		-300			μA

#### Note:

<sup>6.</sup> The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

# **AC Electrical Characteristics**(7)

 $V_{CC}$  = 2.5V ±5% or 3.3V ±10%;  $T_A$  = -40°C to + 85°C,  $R_L$  = 50 $\Omega$  to  $V_{CC}$ -2V, unless otherwise stated.

Symbol	Parameter	Condition		Min	Тур	Max	Units
f <sub>MAX</sub>	Maximum Operating Frequency		NRZ Data	2.5	3.2		Gbps

	SEL-to-Q	$V_{TH} = V_{CC}/2$		250	360	600	ps
T <sub>pd</sub> Tempco	Differential Propagation Delay Temperature Coefficient				158		fs/°C
t <sub>SKEW</sub>	Output-to-Output Skew	Note 8			5	20	ps
	Part-to-Part Skew	Note 9				200	ps
t <sub>Jitter</sub>	Clock						
	Random Jitter	Note 10				1	ps <sub>RMS</sub>
	Cycle-to-Cycle Jitter	Note 11				1	ps <sub>RMS</sub>
	Total Jitter (TJ)	Note 12				10	ps <sub>PP</sub>
	Crosstalk-Induced Jitter	Note 13				0.7	ps <sub>RMS</sub>
t <sub>r,</sub> t <sub>f</sub>	Output Rise/Fall Time (20% to 80%)	At full output swing.		70	130	190	ps

#### Notes:

- 7. High-frequency AC-parameters are guaranteed by design and characterization.
- Output-to-output skew is measured between two different outputs under identical transitions.
- Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs.
- 10. Random Jitter is measured with a K28.7 pattern, measured at <f<sub>MAX</sub>.
- 11. Cycle-to-cycle jitter definition: The variation of periods between adjacent cycles, T<sub>n</sub> T<sub>n-1</sub> where T is the time between rising edges of the output signal.
- 12. Total Jitter definition: With an ideal clock input of frequency  $< f_{MAX}$ , no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.
- 13. Crosstalk is measured at the output while applying two similar differential clock frequencies that are asynchronous with respect to each other at the inputs.

### **Typical Operating Characteristics**

 $V_{CC}$  = 3.3V;  $V_{IN}$  > 400mV;  $T_A$  = 25°C,  $R_L$  = 50 $\Omega$  to  $V_{CC}$ -2V, unless otherwise stated.

### **Functional Characteristics**

 $V_{\text{CC}}$  = 3.3V;  $V_{\text{IN}}$  > 400mV;  $T_{\text{A}}$  = 25°C,  $R_{\text{L}}$  = 50 $\Omega$  to  $V_{\text{CC}}\text{-}2V$ , unless otherwise stated.

Figure 3b. LVPECL Interface (AC-Coupled)

Option: may connect  $V_T$  to  $V_{CC}$ 

Figure 3c. CML Interface (DC-Coupled)

Figure 3d. CML Interface (AC-Coupled)

Figure 3e. LVDS Interface (DC-Coupled)

### **LVPECL Output Interface Applications**

LVPECL has a high input impedance, a very low output impedance (open emitter), and a small signal swing which results in low EMI. LVPECL is ideal for 50Ωand-100Ω-controlled impedance transmission lines. There are several techniques for terminating the LVPECL output including: Parallel Termination-Thevenin Equivalent, Parallel Termination (3-resistor), AC-coupled and Termination. Unused output pairs may be left floating. However, single-ended outputs must be terminated, or balanced.

#### Note:

1. For +2.5V systems, R1 =  $250\Omega$ , R2 =  $62.5\Omega$ .

Figure 4a. Parallel Termination-Thevenin Equivalent

#### Note:

- 1. Power-saving alternative to Thevenin termination.
- Place termination resistors as close to destination inputs as possible.
- 3. Rb resistor sets the DC bias voltage, equal to  $V_{\text{T}}$ .
- 4. For 2.5V systems, Rb =  $19\Omega$ .

Figure 4b. Parallel Termination (3-Resistor)
