3.3 V/5 V ECL Dual Differential 2:1 Multiplexer

MC10EP56, MC100EP56

Description

The MC10/100EP56 is a dual, fully differential 2:1 multiplexer. The differential data path makes the device ideal for multiplexing low skew clock or other skew sensitive signals. Multiple V_{BB} pins are provided.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single–ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a $0.01~\mu F$ capacitor and limit current sourcing or sinking to 0.5~mA. When not used, V_{BB} should be left open.

The device features both individual and common select inputs to address both data path and random logic applications.

The 100 Series contains temperature compensation.

Features

- 360 ps Typical Propagation Delays
- Maximum Frequency > 3 GHz Typical
- PECL Mode Operating Range: V_{CC} = 3.0 V to 5.5 V with V_{EE} = 0 V
- NECL Mode Operating Range: V_{CC} = 0 V with V_{EE} = -3.0 V to -5.5 V
- Open Input Default State
- Safety Clamp on Inputs
- Separate and Common Select
- Q Output Will Default LOW with Inputs Open or at V_{EE}
- V_{BB} Outputs
- These Devices are Pb-Free and are RoHS Compliant
