

## SCANSTA476 Eight Input IEEE 1149.1 Analog Voltage Monitor

Check for Samples: [SCANSTA476](#)

### FEATURES

- Eight Selectable Analog Input Channels
- Analog Full-Scale Input Range 0V to  $V_{DD}$
- Typical Accuracy of 2 mV at Maximum  $V_{DD}$
- Very Low Power Operation
- Small Package Footprint in 16-Lead, 5 x 5 x 0.8 mm WSON
- Single +2.7V to +5.5V Supply Operation
- IEEE 1149.1 (JTAG) Compliant Interface

### APPLICATIONS

- Measurement of Point Voltages
- Real-time Signal Monitoring
- System Health Monitoring and Prognostics
- Debug, Environmental Test, Production Test, Field Service
- Supplement In-Circuit Tester (ICT) Access
- Vital in Servers, Computing, Telecommunication and Industrial Equipment
- Essential in Medical, Data Storage, and Networking Equipment

### DESCRIPTION

The SCANSTA476 is a low power, Analog Voltage Monitor used for sampling or monitoring up to 8 analog/mixed-signal input channels. Analog Voltage Monitors are valuable during product development, environmental test, production, and field service for verifying and monitoring power supply and reference voltages. In a supervisory role, the 'STA476 is useful for card or system-level health monitoring and prognostics applications.

Instead of requiring an external microcontroller with a GPIO interface, the 'STA476 features a common IEEE 1149.1 (JTAG) interface to select the analog input, initiate a measurement, and access the results - further extending the capabilities of an existing JTAG infrastructure.

The SCANSTA476 uses the  $V_{REF}$  input as a reference. This enables the SCANSTA476 to operate with a full-scale input range of 0 to  $V_{DD}$ , which can range from +2.7V to +5.5V.

The SCANSTA476 is packaged in a 16-lead non-pullback WSON package that provides an extremely small footprint for applications where space is a critical consideration. This product operates over the industrial temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

### Block Diagram

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Connection Diagram

Figure 1. DAP = GND (Top View)

Pin Descriptions

Pin No.	Symbol	Description
<b>ANALOG I/O</b>		
16	A0	Analog input 0. This signal can range from 0V to $V_{REF}$ .
15	A1	Analog input 1. This signal can range from 0V to $V_{REF}$ .
14	A2	Analog input 2. This signal can range from 0V to $V_{REF}$ .
13	A3	Analog input 3. This signal can range from 0V to $V_{REF}$ .
12	A4	Analog input 4. This signal can range from 0V to $V_{REF}$ .
11	A5	Analog input 5. This signal can range from 0V to $V_{REF}$ .
10	A6	Analog input 6. This signal can range from 0V to $V_{REF}$ .
9	A7	Analog input 7. This signal can range from 0V to $V_{REF}$ .
2	$V_{REF}$	Analog reference voltage input. $V_{REF}$ must be $\leq V_{DD}$ . This pin should be connected to a quiet source (not directly to $V_{DD}$ ) and bypassed to GND with 0.1 $\mu$ F and 1 $\mu$ F monolithic capacitors located within 1 cm of the $V_{REF}$ pin.
<b>DIGITAL I/O</b>		
6	TDI	Test Data Input to support IEEE 1149.1 features
5	TDO	Test Data Output to support IEEE 1149.1 features
7	TMS	Test Mode Select to support IEEE 1149.1 features
8	TCK	Test Clock to support IEEE 1149.1 features
4	$\overline{TRST}$	Test Reset to support IEEE 1149.1 features
<b>POWER SUPPLY</b>		
1,3	$V_{DD}$	Positive supply pin. These pins should be connected to a quiet +2.7V to +5.5V source and bypassed to GND with 0.1 $\mu$ F and 1 $\mu$ F monolithic capacitors located within 1 cm of the power pin.
See <sup>(1)</sup>	GND	Ground reference for CMOS circuitry. DAP is the exposed metal contact at the bottom of the WSON package. The DAP is used as the primary GND connection to the device. It should be connected to the ground plane with at least 4 vias for optimal low-noise and thermal performance.

(1) Note that GND is not an actual pin on the package, the GND is connected thru the DAP on the back side of the WSON package.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### Absolute Maximum Ratings <sup>(1)(2)</sup>

Supply Voltage $V_{DD}$		-0.3V to +6.5V
Voltage on Any Analog Pin to GND		-0.3V to $V_{DD}+0.3V$
Voltage on Any Digital Pin to GND		-0.3V to $V_{DD}+0.3V$
Input Current at Any Pin <sup>(3)</sup>		±10 mA
ESD Susceptibility	Human Body Model	8000V
	Machine Model	>250V
Soldering Temperature		Refer to AN-1187 ( <a href="#">SNOA401</a> )
Junction Temperature		+150°C
Storage Temperature		-65°C to +150°C
Thermal Resistance, $\theta_{JA}$		42°C/W
Thermal Resistance, $\theta_{JC}$		14.3°C/W

- (1) Absolute maximum ratings are limiting values, to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability under any of these conditions is not implied. Exposure to maximum ratings for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the TI Sales Office/ Distributors for availability and specifications.
- (3) Except power supply pins.

### Recommended Operating Conditions

Operating Temperature Range	$-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$
$V_{DD}$ Supply Voltage	+2.7V to +5.5V
Digital Input Pins Voltage Range	+0V to $V_{DD}$
Analog Input Pins Voltage Range <sup>(1)</sup>	+0V to $V_{REF}$

- (1) For valid measurements, the analog  $V_{IN} < V_{REF} \leq V_{DD}$ .

### SCANSTA476 Electrical Characteristics

The following specifications apply for  $V_{DD} = +2.7V$  to 5.5V,  $f_{TCK} = 20$  MHz, unless otherwise noted.

Symbol	Parameter	Conditions	Typical	Limits	Units
<b>POWER SUPPLY CHARACTERISTICS</b>					
$V_{DD}$	Supply Voltage	$-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$		2.7	V (min)
				5.5	V (max)
$I_{DD}$	Normal Mode (Static)	$V_{DD} = +2.7V$ to +5.5V,	3.5	5.0	mA
	Normal Mode (Operational)	$V_{DD} = +2.7V$ to +5.5V, $f_{TCK} = 1$ MSPS			
$P_D$	Power Consumption, Normal Mode (Operational)	$V_{DD} = +5.5V$ , $f_{TCK} = 1$ MSPS		27.5	mW (max)
<b>ANALOG INPUT CHARACTERISTICS (A0-A7)</b>					
$V_{IN}$	Analog Input Range	$V_{REF} \leq V_{DD}$		0 to $V_{REF}$	V
$V_{REF}$	Reference Voltage Range			$V_{DD}$	V
$I_{DCL}$	DC Leakage Current		0.1	±10	µA (max)
$V_{MEAS}$	Analog Input Measurement Accuracy	$V_{DD} = +2.7V$	1	7.5	mV
		$V_{DD} = +5.5V$	2	15	
<b>DIGITAL INPUT CHARACTERISTICS (TDI, TMS, TCK, TRST)</b>					
$V_{IH}$	Input High Voltage	$V_{DD} = +2.7V$ to +3.6V		2.0	V (min)
		$V_{DD} = +5.5V$		2.1	
$V_{IL}$	Input Low Voltage	$V_{DD} = +5V$		0.8	V (max)
$V_{CL}$	Input Clamp Voltage	$I_{CL} = -18mA$	-0.8	-1.5	V (max)
$I_{IN}$	Input Current	$V_{IN} = 0V$ or $V_{DD}$	0.2	±10	µA (max)

## SCANSTA476 Electrical Characteristics (continued)

The following specifications apply for  $V_{DD} = +2.7V$  to  $5.5V$ ,  $f_{TCK} = 20$  MHz, unless otherwise noted.

Symbol	Parameter	Conditions	Typical	Limits	Units
$I_{ILR}$	Input Current	$\overline{TRST}$ , TDI, TMS only		-300	$\mu A$ (max)
<b>DIGITAL OUTPUT CHARACTERISTICS (TDO)</b>					
$V_{OH}$	Output High Voltage	$I_{OH} = -100 \mu A, 2.7V \leq V_{DD} \leq 5.5V$		$V_{DD} - 0.2$	V (min)
		$I_{OH} = -4 mA, 3.0V \leq V_{DD} \leq 5.5V$		2.4	V (min)
		$I_{OH} = -4 mA, V_{DD} = 2.7V$		2.2	V (min)
$V_{OL}$	Output Low Voltage	$I_{OL} = 100 \mu A, 2.7V \leq V_{DD} \leq 5.5V$		0.2	V (max)
		$I_{OL} = 4 mA, 2.7V \leq V_{DD} \leq 5.5V$		0.4	V (max)
$I_{OS}$	Output Short Circuit Current	$V_{OUT} = 0V, V_{DD} = 5.5V$		-85	mA (max)
$I_{OZ}$	TRI-STATE Leakage Current			$\pm 10$	$\mu A$ (max)
	Output Coding		Straight (Natural) Binary		
<b>AC ELECTRICAL CHARACTERISTICS</b>					
$F_{MAX}$	Throughput Rate	TCK = 20MHz		1	MSPS (max)
<b>INPUT TIMING CHARACTERISTICS</b>					
$t_{SET}$	TDI to TCK (H/L)	See <sup>(1)</sup>		2.0	ns (min)
$t_{HOLD}$	TDI to TCK (H/L)	See <sup>(1)</sup>		1.5	ns (min)
$t_{SET}$	TMS to TCK (H/L)	See <sup>(1)</sup>		2.0	ns (min)
$t_{HOLD}$	TMS to TCK (H/L)	See <sup>(1)</sup>		2.0	ns (min)
$t_W$	TCK Pulse Width (H/L)	See <sup>(1)</sup>		10.0	ns (min)
$t_{REC}$	Recovery Time $\overline{TRST}$ to TCK	See <sup>(1)</sup>		2.0	ns (min)
$t_W$	TRST Pulse Width (L)	See <sup>(1)</sup>		2.5	ns (min)
$F_{MAX}$	TCK			20	MHz (min)

(1) Data sheet min/max specification limits are specified by design or statistical analysis.

## APPLICATIONS INFORMATION

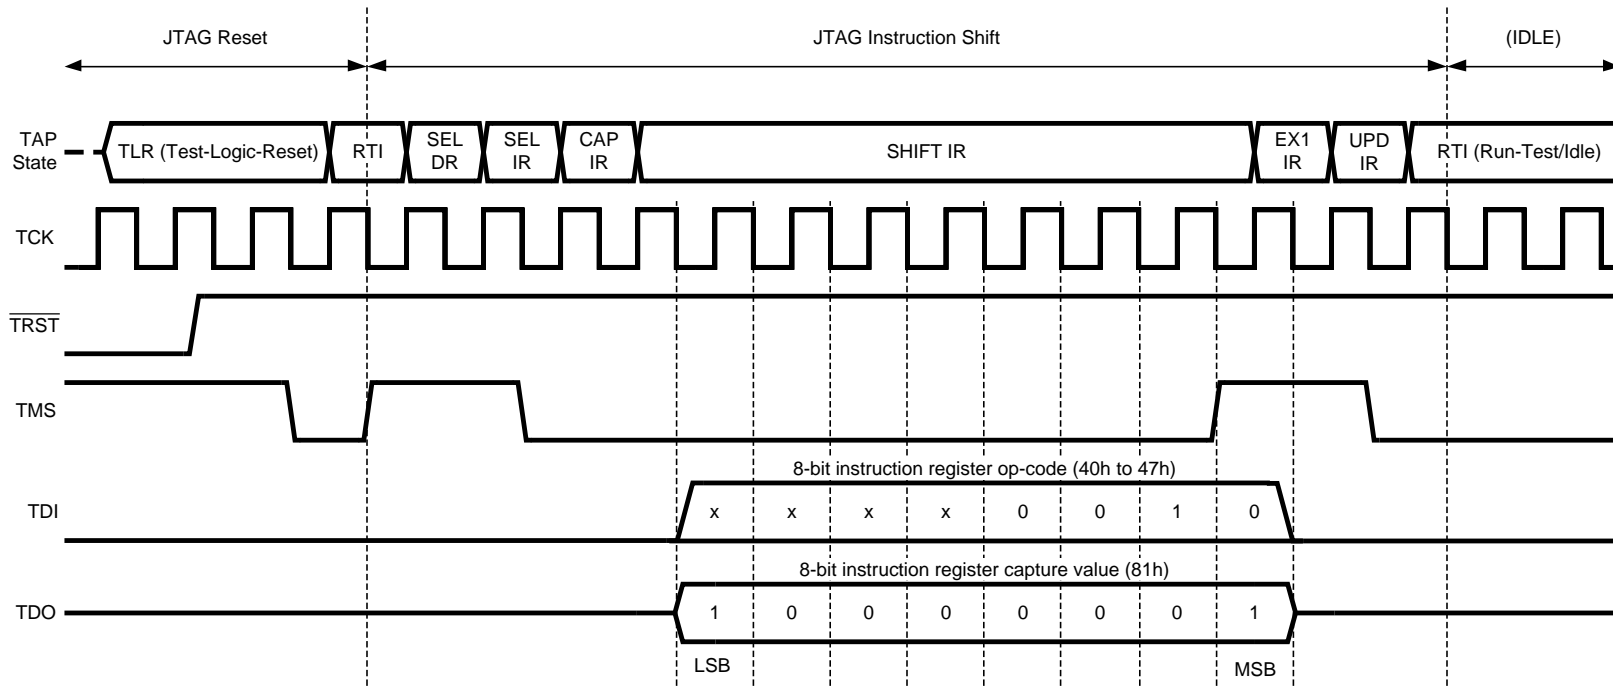

### POWER-UP TIMING

The SCANSTA476 typically requires 1  $\mu s$  to power up, either after first applying  $V_{DD}$ , or after an incomplete conversion shift. To return to normal, one "dummy" conversion must be fully completed. After this first dummy conversion, the SCANSTA476 will perform conversions properly.

### STARTUP MODE

When the  $V_{DD}$  supply is first applied, the SCANSTA476 requires one dummy conversion after start-up.

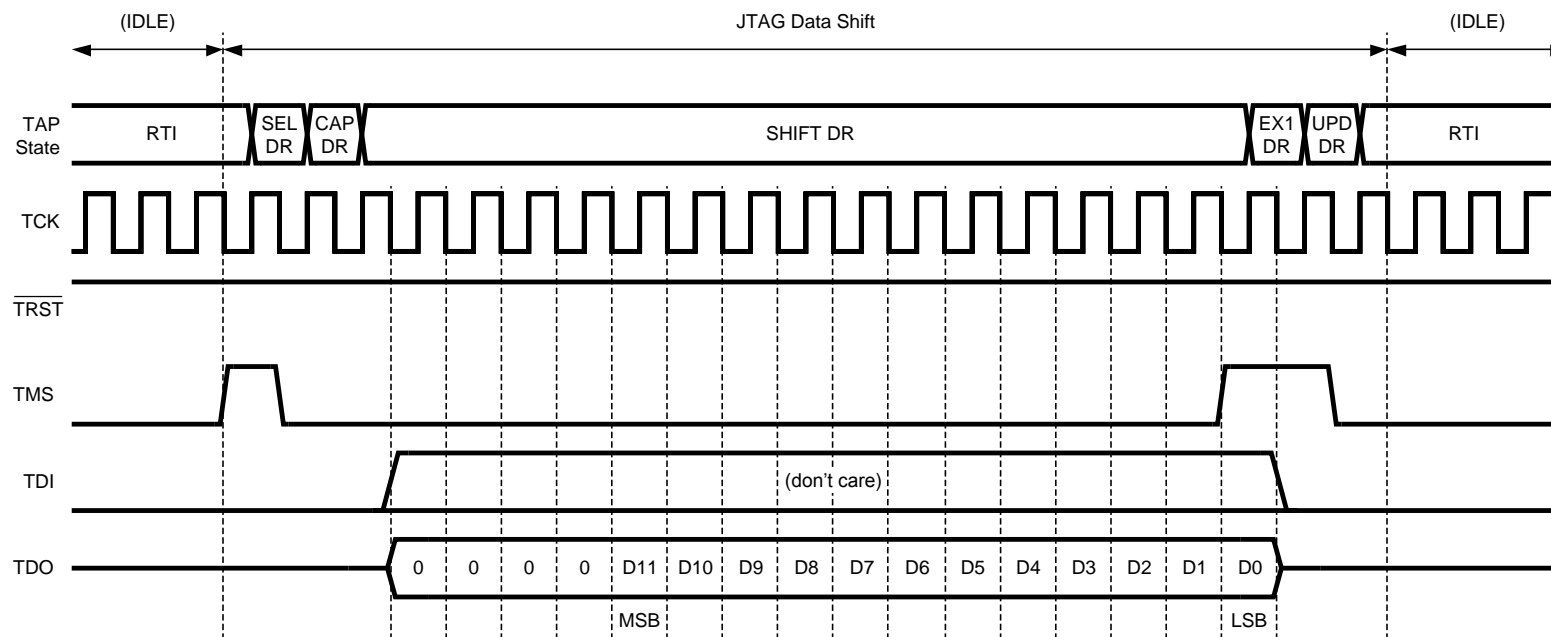

Timing Diagrams

Op-codes 40h to 47h select pins A0 to A7 respectively.

Note the JTAG reset preamble places the JTAG TAP controller in a stable state (RTI). Both the instruction and data shifts start in - and return to - the RTI state

Figure 2. Instruction Shift (Channel Select)

D11 through D0 correspond to the 12-bit sample from the ADC Core.

Note that Data shifts can be run back-to-back for continuous sampling of a single channel, or can be interleaved with instruction shifts for rippling through all 8 channels.

**Figure 3. Data Shift (A/D Sample)**

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SCANSTA476TSD/NOPB	ACTIVE	WSON	NHQ	16	1000	RoHS & Green	SN	Level-3-260C-168 HR	-40 to 85	STA476T	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
