

CD54/74HC139, CD54/74HCT139

FUNCTIONAL DIAGRAM

Dual 2-to-4 Line Decoder/Demultiplexer

Type Features:

- Multifunction Capability  
Binary to 1-of-4 Decoders or  
1-to-4 Line Demultiplexer
- Active Low Mutually Exclusive Outputs

Applications:

- Memory Decoding
- Data Routing
- Code Conversion

The RCA-CD54/74HC139 and CD54/74HCT139 contain two independent binary to one-of-four decoders each with a single active low enable input ( $\overline{1E}$ , or  $\overline{2E}$ ). Data on the select inputs (1A0 and 1A1 or 2A0 and 2A1) cause one of the four normally high outputs to go low.

If the enable input is high all four outputs remain high. For demultiplexer operation the enable input is the data input. The enable input also functions as a chip select when these devices are cascaded. This device is functionally the same as the CD4556B and is pin compatible with it.

The outputs of these devices can drive 10 low power Schottky TTL equivalent loads. The 54/74HCT logic family is functionally as well as pin equivalent to the 54/74LS logic family.

The CD54HC139 and CD54HCT139 are supplied in 16-lead hermetic dual-in-line ceramic packages (F suffix). The CD74HC139 and CD74HCT139 are supplied in 16-lead dual-in-line plastic packages (E suffix) and in 16-lead dual-in-line surface-mount plastic packages (M suffix). Both types are also available in chip form (H suffix).
