Flavus 2.4 GHz Snap-In Antenna

Product Specification

1 Features

- Designed for 2.4 GHz applications [Bluetooth™, WiFi™ (802.11b/g), Zigbee™, WiMedia™ etc.]
- Intended for Snap-In mounting
- Supplied in trays

2 Description

The Flavus antenna is intended for use with all 2.4 GHz applications. The antenna is a halfwave type and this makes the antenna less sensitive to ground and surrounding components and facilitates easy antenna placement on the PCB. The antenna uses plastic snap ins to attach to the PCB, no need for soldering.

3 Application

- Industrial applications
- Network nodes
- Access points
- Portable PCs
- Wireless cable modems

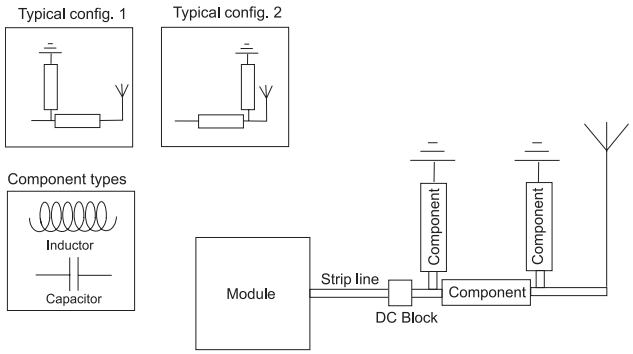
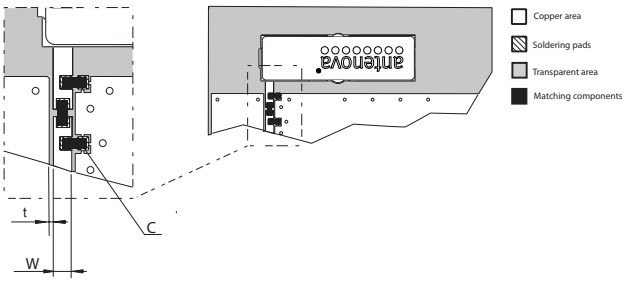
10.1 Transmission line and matching



The matching network has to be individually designed using one, two or three components.



t, w = Unique dimensioning according to your PCB *

C = Inductor and capacitor values according to your specific device*

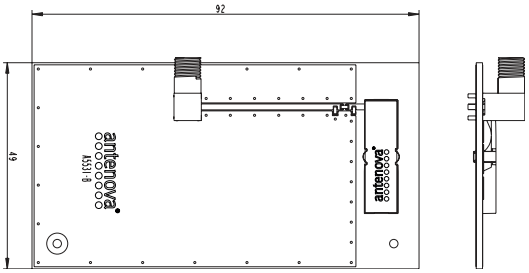
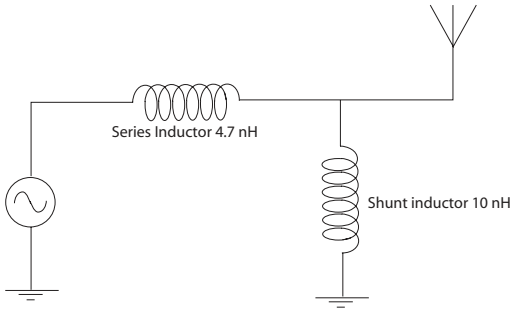
10.2 Test board dimensions



The testboard is designed for evaluation purposes for the Flavus 2.4 GHz antenna. The card has the same size as a typical PCMCIA card and is fitted with an SMA connector.

10.3 Test board matching



The testboard is matched with above specified component.

Note! The component value(s) will vary depending on size of PCB, surrounding components etc.

13 Application example

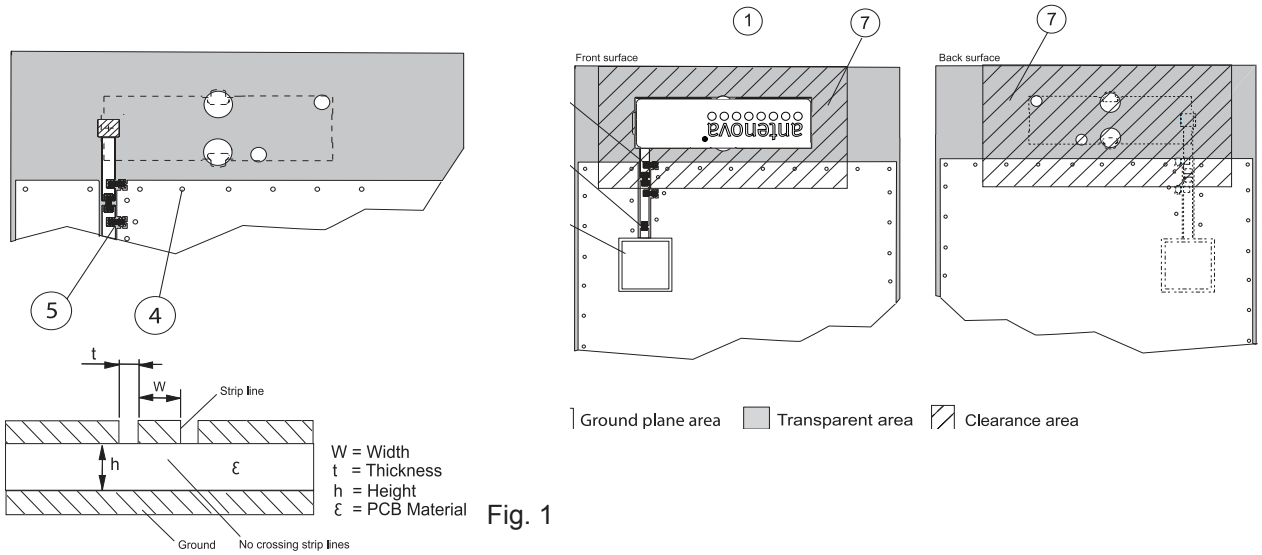

Fig. 1

1. **Placement of antenna**
   The antenna shall preferably be placed at the edge of the PCB oriented as above. Other placements and orientations and size of groundplanes are possible, but will affect the performance. Avoid active components near the antenna.
2. **Placement of 2.4 GHz module**
   To avoid losses the module shall be placed as close to the antenna as possible.
3. **Strip line**
   The strip line must be dimensioned according to your specific PCB. (see fig 1). No crossing strip lines are allowed between the strip line and its ground plane.
4. **Via connections**
   To avoid spurious effects, via connections must be made to analogue ground.
5. **Component matching**
   Component values are depending on antenna placement, PCB dimensions and location of other components.
6. **DC Block**
   Might be needed depending on RF Module configuration.
7. **Clearance area**
   Avoid components and parts close to the antenna.

Note ! Incorrect implementation of the antenna will affect the performance.
