

ARTESYN DS800SL SERIES

800 Watts Bulk Front End

Advanced Energy's Artesyn DS800SL series bulk front end AC-DC power supply accepts a wide range 90–264 Vac input and provides a main 12 V output plus a 5 V standby output. Rated at 800 watts it is an 80 Plus Gold supply with a high half-load efficiency of 92%. Housed in a slimline 1U high, 2.1 inch wide rack-mounting package, the power supply is primarily designed for ‘always-on’ enterprise servers and similar space-constrained applications. This series comes in two airflow versions – dc-connector to ac-connector and vice versa.

DATA SHEET

Total Output Power:

800 Watts +5.0 Vdc Standby

SPECIAL FEATURES

- 800 W output power
- 19.05 W/cu-in
- 1U X 54.5 mm form factor (slimline)
- N + 1 redundant
- Hot-swap
- Internal OR'ing
- 5.0 V housekeeping
- High efficiency 92% @ 200 Vac, 50% load (Climate Savers Gold)
- Variable speed “smart fans”
- EMI Class B
- Available in two airflow directions

SAFETY

- UL/cUL 60950 -1
- CSA 60950-1
- VDE 60950-1
- China CCC
- CB Scheme Report/Cert

| Tsb_vout | Delay from 5.0 Vsb being in regulation to 12 Vdc being in regulation at AC turn on. | 50 | 1000 | mSec |

PSON

The PSON# signal is required to remotely turn on/off the power supply. PSON# is an active low signal that turns on the +12 Vdc power rail. When this signal is not pulled low by the system, or left open, the +12 Vdc output turns off. The Vsb output remains on. This signal is pulled to a standby voltage by a pull-up resistor internal to the power supply. The power supply fan(s) shall operate at the lowest speed.

| PSON Signal Characteristics | | |
|-------------------------------------|--|----------|
| Signal Type | Accepts an open collector/drain input from the system. Pulled-up to the 5.0 Vsb located in power supply. | |
| PSON# = Low | ON | |
| PSON# = Open | OFF | |
| | MIN | MAX |
| Logic level low (power supply ON) | 0 V | 0.8 V |
| Logic level high (power supply OFF) | 2.0 V | 5.2 V |
| Source current, Vpson = low | | 4 mA |
| Power up delay: Tpson_on_delay | 5 msec | 200 msec |

PWOK# (Power Good)

PWOK is a power good signal and will assert HIGH when the outputs are within the regulation limits. PWOK will be pulled LOW by the power supply to indicate when either output falls below regulation limits or when AC power has been removed for a time sufficiently long so that power supply operation is no longer guaranteed. The start of the PWOK# delay time shall be inhibited as long as the +12 Vdc output is in current limit or the 5.0 Vsb output is below the regulation limit.

| PWOK Signal Characteristics | | |
|---|--|---------------|
| Signal Type | Open collector/drain output from power supply. Pullup to 5.0 Vsb external to the power supply. | |
| PWOK = High | Power Good | |
| PWOK = Low | Power Not Good | |
| | MIN | MAX |
| To tLogic level low voltage, Ising = 4 mA | 0 V | 0.8 V |
| Logic level high voltage, Isource = 200 μ A | 2.0 V | 5.2V |
| Sink current, PWOK = low | | 4 mA |
| Source current, PWOK = high | | 2 mA |
| PWOK delay: Tpwok_on | 100 ms | 1000 ms |
| PWOK rise and fall time | | 100 μ sec |
| Power down delay: Tpson_off | 1 msec | 1000 msec |

OUTPUTS - ALL MODELS (CONTINUED)

PSKILL

The +12 Vdc output only from the power supply shall be disabled if the PSKILL input is high and V Standby will continue to be provided, outputs may be enabled if this signal is low. The power supply includes a pull up to disable all outputs if this signal is open. PSKILL shall not be connected during a hot insertion before all of the other pins are connected.

AC INPUT PRESENT INDICATOR (ACOK/L)

The ACOK signal is used to indicate presence of AC input to the power supply. This signal shall be connected to Vsb through a resistor on the host system side. A logic “Low” level on this signal shall indicate AC input to the power supply is present. A Logic “High” on this signal shall indicate a loss of AC input to the power supply.

| ACOK# Signal Characteristics | | |
|---|---|---------|
| Signal Type | Pull up to 5.0 Vsb through a resistor in the host system. | |
| Present = High | Present | |
| Present = Low | Not Present | |
| | MIN | MAX |
| Logic level low voltage, Isink = 4 mA | 0 V | 0.8 V |
| Logic level high voltage, Isink = 50 µA | | |
| | 2.0 V | 5.2 V |
| Sink current, PRESENT# = low | | 4 mA |
| Sink current, PRESENT# = high | | 50 µsec |

STATUS INDICATIONS

See table below for Summary of Status signals, Ports and Indicators. The condition column assumes 2 or more power supplies present and ON and 5.0 Vsb shared for management interface. On the “Fan Blocked” condition, the assumption is that all outputs are within spec and not over temperature. This would be considered a “warning” condition. On the “Standby” condition, the system differentiates this state by knowing PS_ONL in negated (requesting Standby).

MECHANICAL DRAWING

BURN-IN

100% Burn-in at 45 °C, at 80-90% load. Duration of burn-in determined by Quality Assurance Procedures.

MTBF

The power supply has an MTBF of >400K hours using Telcordia SR-332 at full load, and 25 °C ambient. With the power supply installed in a system in a 25 °C ambient environment and operating at full load, capacitor life shall be 5 years, minimum for ALL electrolytic capacitors contained within this power supply.

QUALITY ASSURANCE

Full QAV testing shall be conducted in accordance with Artesyn Embedded Power Standards with reports available upon request.

WARRANTY

Artesyn Embedded Power shall warrant the power supply to be free of defects in materials and workmanship for a minimum period of two years from the date of shipment, when operated within specifications. The warranty shall be fully transferable to the end owner of the equipment powered by the supply.

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
