

1ch Buck switching regulator

BD9611MUV EVK

BD9611MUV-EVK-001 (24V → 12V, 10A)

<High Voltage Safety Precautions>

◇ Read all safety precautions before use

Please note that this document covers only the **BD9611MUV** evaluation board (**BD9611MUV-EVK-001**) and its functions. For additional information, please refer to the datasheet.

To ensure safe operation, please carefully read all precautions before handling the evaluation board

Depending on the configuration of the board and voltages used,

Potentially lethal voltages may be generated.

Therefore, please make sure to read and observe all safety precautions described in the red box below.

Before Use

- [1] Verify that the parts/components are not damaged or missing (i.e. due to the drops).
- [2] Check that there are no conductive foreign objects on the board.
- [3] Be careful when performing soldering on the module and/or evaluation board to ensure that solder splash does not occur.
- [4] Check that there is no condensation or water droplets on the circuit board.

During Use

- [5] Be careful to not allow conductive objects to come into contact with the board.
- [6] **Brief accidental contact or even bringing your hand close to the board may result in discharge and lead to severe injury or death.**

Therefore, DO NOT touch the board with your bare hands or bring them too close to the board.

In addition, as mentioned above please exercise extreme caution when using conductive tools such as tweezers and screwdrivers.

- [7] If used under conditions beyond its rated voltage, it may cause defects such as short-circuit or, depending on the circumstances, explosion or other permanent damages.
- [8] Be sure to wear insulated gloves when handling is required during operation.

After Use

- [9] The ROHM Evaluation Board contains the circuits which store the high voltage. Since it stores the charges even after the connected power circuits are cut, please discharge the electricity after using it, and please deal with it after confirming such electric discharge.
- [10] Protect against electric shocks by wearing insulated gloves when handling.

This evaluation board is intended for use only in research and development facilities and should be handled **only by qualified personnel familiar with all safety and operating procedures.**

We recommend carrying out operation in a safe environment that includes the use of high voltage signage at all entrances, safety interlocks, and protective glasses.

ROHM Switching Regulator Solutions

1ch Buck switching regulator BD9611MUV EVK

BD9611MUV-EVK-001 (24V → 12V, 10A)

Introduction

This user's guide will provide the steps necessary to operate the BD9611MUV-EVK-001 and evaluate ROHM's BD9611MUV synchronous buck-boost DC/DC controller. Component selection, operating procedures and application data are included.

Description

Using a synchronous rectified step-down DC/DC converter IC BD9611MUV, BD9611MUV-EVK-001 evaluation board outputs 12.0 V with a 15V to 36V input voltage and provides 10A output current. Output current is possible with current settings by selecting high rated current FET and coil. It is possible to adjust the loop characteristics by phase compensation components and can set the output voltage by changing the IC external parts.

Application

General Portable Equipment such as:

- Amusement machines
- Industrial Equipment
- Office Automation Equipment
- LED lighting
- General equipment that require 24V or 48V supply

Evaluation Board Operating Limits and Absolute Maximum Ratings

(This is not typical and the characteristics)

Unless otherwise specified : VIN = 24V, VOUT = 12.0V, Iout=6A

Table 1. Operating Limits

Parameter	Min	Typ	Max	Units	Conditions
Supply Voltage	15		36	V	
Output Voltage		12.0		V	RU1=120kΩ, RU2=20kΩ, RD1=10kΩ, RD2=short
Output Voltage range	1		VIN×0.8	V	
Output Current	0		10	A	
Closed Loop Band Width		12.02		kHz	
Phase margin		82.34		degrees	I _o = 8A
Soft Start Time		8		ms	
Operating frequency		250		kHz	
Maximum Efficiency		95.1		%	I _o = 4A

EVK overview

Figure 1. BD9611MUV-EVK-001(Top View)

Figure 2. BD9611MUV-EVK-001(Bottom View)

EVK Schematic

VIN = 15.0V to 36V, VOUT = 12.0V

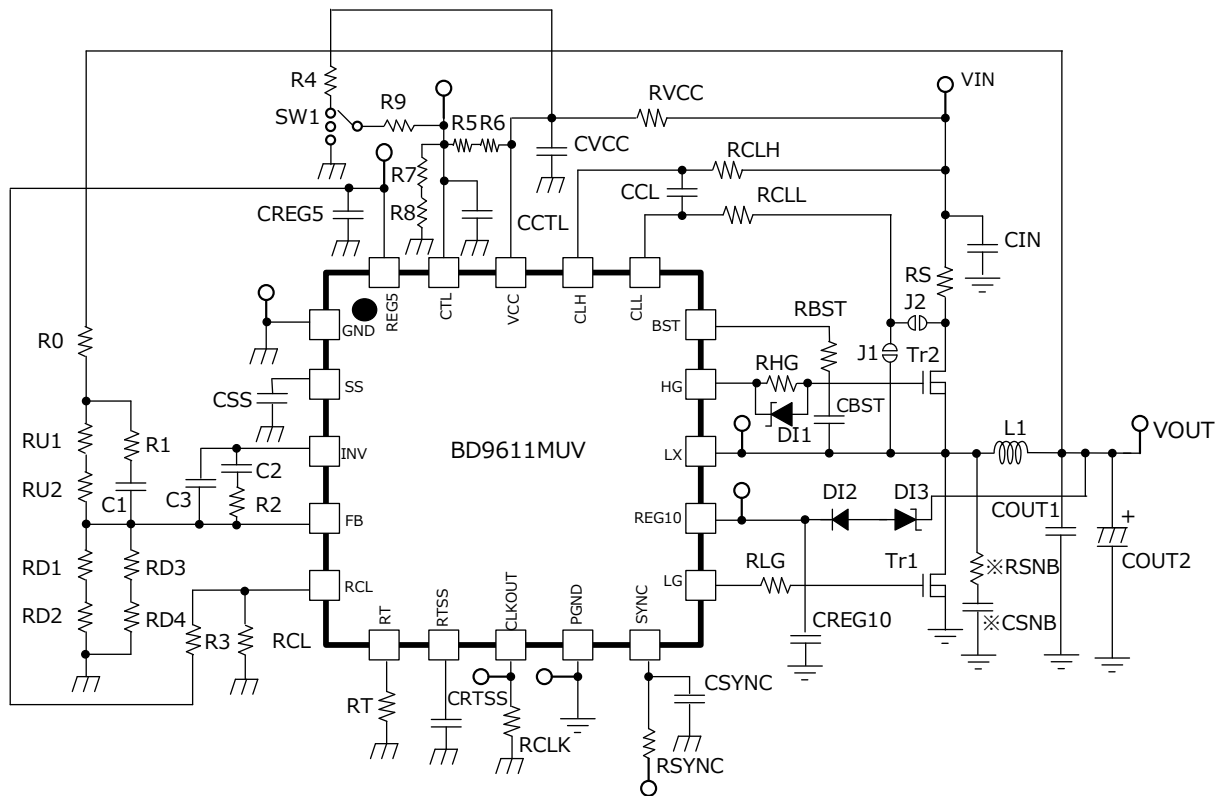

Figure 3. BD9611MUV-EVK-001 Application circuit

Operating Procedure

1. Connect power supply's GND terminal to GND on the evaluation board.
2. Connect power supply's VIN terminal to VIN test point on the evaluation board. This will provide the power supply voltage to the IC. The EN pin of this evaluation board is set to input the resistive divided voltage of the VIN pin.
3. The output voltage can be measured at the test point VOUT. Now turn on the load. Connect an electronic load or resistive load to the VOUT pin and apply the load. The load can be increased up to 10A MAX.

Figure 4. Evaluation board setup

Enable

The board can switch between normal operation and standby mode to minimize power consumption by controlling the CTL of the IC (19 pin). By default, it is controlled using voltage divider resistor network of R5, R6, R7, and R8 which is referenced from VIN.

SW1 is not mounted on the EVK, but when using SW1, opening R5, R6, R7, and R8 and shorting R9, enables the use of SW1. Switching it to the GND will enter Standby Mode while switching it to VIN will enter to Normal operation.

In addition, by removing R9 and controlling the voltage between the CTL and GND pins, standby mode and normal operation can be switched. When the voltage on the CTL pin is less than 2.6V, standby mode is used, and when the voltage is 2.6V or higher, normal operation is performed. Since the hysteresis voltage is set by an internal low current and an external resistor, when the CTL pin is directly controlled by voltage, the hysteresis voltage is determined by the impedance of the power supply supplying the voltage to the CTL pin and the internal constant current.

Evaluation Board BOM (VOUT =12.0V)

LX pin overshoot voltage countermeasure: Snubber Circuit

Overshoot voltage of LX pin is caused by the parasitic capacitance of the high-side and low-side FET and parasitic inductance of the board layout pattern. The power supply voltage range and load range used, and also the output short circuit must ensure that LX pin voltage does not exceed the recommended operating range.

If the overshoot voltage of the LX pin is large, set a snubber circuit in where the resistor RSNB and the capacitor CSNB are connected in series between the LX pin and PGND, as described in Figure 5 and prevent overshoot.

※RSNB and CSNB are not in the evaluation board pattern. It is recommended to place the pattern to allow countermeasures when an overshoot occurs.

Figure 5. Snubber circuit

DI2 and DI3 between output voltage and REG10

By connecting the diode of DI3 between the output and REG10, loss can be reduced by supplying power from the output voltage instead of REG10 inside the IC.

For the REG10 maximum rated voltage of 15V, it is necessary to consider output voltage fluctuations (IC variations, resistance tolerances, load fluctuations) and other factors.

<Precaution>

This document is an example of BD9611MUV application circuit and operation; it is not a guarantee to work.

Notes

- 1) The information contained herein is subject to change without notice.
- 2) Before you use our Products, please contact our sales representative and verify the latest specifications :
- 3) Although ROHM is continuously working to improve product reliability and quality, semiconductors can break down and malfunction due to various factors.
Therefore, in order to prevent personal injury or fire arising from failure, please take safety measures such as complying with the derating characteristics, implementing redundant and fire prevention designs, and utilizing backups and fail-safe procedures. ROHM shall have no responsibility for any damages arising out of the use of our Products beyond the rating specified by ROHM.
- 4) Examples of application circuits, circuit constants and any other information contained herein are provided only to illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.
- 5) The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM or any other parties. ROHM shall have no responsibility whatsoever for any dispute arising out of the use of such technical information.
- 6) The Products specified in this document are not designed to be radiation tolerant.
- 7) For use of our Products in applications requiring a high degree of reliability (as exemplified below), please contact and consult with a ROHM representative : transportation equipment (i.e. cars, ships, trains), primary communication equipment, traffic lights, fire/crime prevention, safety equipment, medical systems, servers, solar cells, and power transmission systems.
- 8) Do not use our Products in applications requiring extremely high reliability, such as aerospace equipment, nuclear power control systems, and submarine repeaters.
- 9) ROHM shall have no responsibility for any damages or injury arising from non-compliance with the recommended usage conditions and specifications contained herein.
- 10) ROHM has used reasonable care to ensure the accuracy of the information contained in this document. However, ROHM does not warrants that such information is error-free, and ROHM shall have no responsibility for any damages arising from any inaccuracy or misprint of such information.
- 11) Please use the Products in accordance with any applicable environmental laws and regulations, such as the RoHS Directive. For more details, including RoHS compatibility, please contact a ROHM sales office. ROHM shall have no responsibility for any damages or losses resulting non-compliance with any applicable laws or regulations.
- 12) When providing our Products and technologies contained in this document to other countries, you must abide by the procedures and provisions stipulated in all applicable export laws and regulations, including without limitation the US Export Administration Regulations and the Foreign Exchange and Foreign Trade Act.
- 13) This document, in part or in whole, may not be reprinted or reproduced without prior consent of ROHM.

Thank you for your accessing to ROHM product informations.
