# 38-38.5 GHz RF 4-channel voltage controlled oscillator front-end for W-band radar applications

The MR2001 is a scalable three package solution for automotive radar modules. The chipset consists of a four channel VCO (voltage controlled oscillator), a two-channel Tx transmitter, and a three-channel Rx receiver. The MR2001V is a high performance, highly integrated, four-channel VCO, ideally suited for automotive radar applications. In conjunction with the MR2001T, the two-channel transmitter, and the MR2001R, a threechannel receiver, it provides a scalable three package solution for automotive radar modules.

### Features

- 38 GHz to 38.5 GHz LO output ٠
- Supply voltage 3.3 V, 4.5 V
- Supply current typ. 180 mA, 50 mA •
- Power dissipation typ. 0.8 W
- KVCO 2.5 GHz/V
- Pushing typ. 250 MHz/V
- Static Pulling < 10 MHz
- Phase Noise typ. -95 dBc/Hz at 1.0 MHz
- LO Power min. 3.0 dBm
- ٠ Power Control (4 steps)

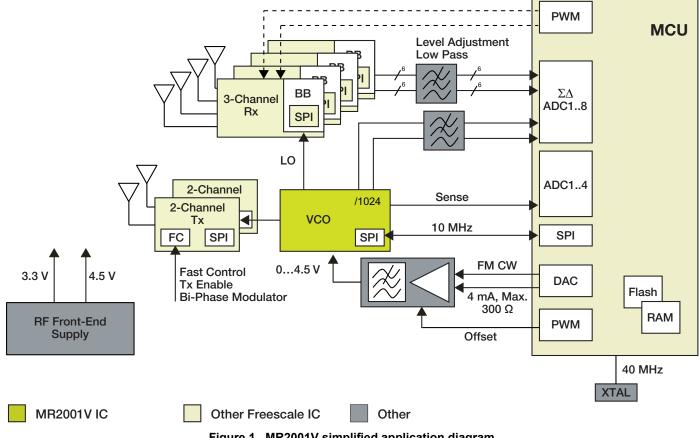

## ADVANCED DRIVER ASSISTANCE SYSTEM

MR2001V

#### Applications

- Automotive proximity radar
- LRR, MRR and SRR
- ADAS
- Industrial surveillance and security systems

This document contains certain information on a new product. Specifications and information herein are subject to change without notice.

#### Table 1. Orderable part variations

| Part Number   | Temperature (temp)   | Package | Notes |
|---------------|--|---------|-------|
| MC33MR2001VVK | 33MR2001VVK -40 °C to 125 °C 6.0 x 6.0 mm RCP (10 x 11 array) 0.5 mm p |         | (1)   |

Notes

1. To order parts in Tape & Reel, add R2 to the suffix of the part number.

| A8, A9, A10, B8, B9, K1,<br>K2, K3, L1, L2  | 3.3 V Power Supply                    |  |
| B1  | 1.8 V Regulator Output                |  |
| C1  | SPI enable (chip enable)              |  |
| C10   | Digital scan test                     |  |
| C6  | 38 GHz LO output channel 4            |  |
| D2  | SPI serial clock                      |  |
| E1  | SPI MISO (master in, slave out)       |  |

| Ball location      | Pin function  |
|--------------------|---|
| E2                 | SPI MOSI (master out, slave in)                         |
| E8                 | 38 GHz LO output channel 3                              |
| G10                | Bandgap reference resistor (positive temperature slope) |
| G3                 | 38 GHz LO output channel 1                              |
| H10                | Bandgap reference resistor (negative temperature slope) |
| J1                 | Output to monitor internal bias nodes via<br>ASCAN      |
| J10                | 4.5 V Power Supply<br>(only for the VCO core)           |
| J5                 | 38 GHz LO output channel 2                              |
| J7, K7, K8, L8, L9 | 3.3 V Power Supply                                      |
| K10                | Tuning Voltage  |
| L7                 | Sensor output (temperature and power peak detector)     |

## Table 3. Key parameters

| Symbol              | Parameter  |  | Unit  | Notes |
|---------------------|--|--|-------|-------|
| V <sub>CC</sub>     | Supply Voltage (VCO not included) <ul> <li>Nominal supply ±5% variation</li> </ul>     |  | V     |       |
| I <sub>CC1</sub>    | Supply Current (all channels on, VCO not included) <ul> <li>All channels ON</li> </ul> |  | mA    |       |
| V <sub>CC_VCO</sub> | VCO Supply Voltage   |  | V     |       |
| I <sub>CC_VCO</sub> | VCO Supply Current   |  | mA    |       |
| P <sub>DIS</sub>    | Power Consumption (all channels ON) <ul> <li>all channels ON, max. power</li> </ul>    |  | W     |       |
| Frequency and #     | t of channels  |  |       |       |
| KVCO                | KVCO VCO tuning sensitivity ( $\Delta f/\Delta V$ ) at 76-77 GHz                       |  | GHz/V |       |

Temp = -40 °C to +125 °C,  $f_{OUT}$  = 38 to 38.5 GHz,  $V_{CC4P0}$  = 4.5 V ±5.0%, and  $V_{CC3P3}$  = 3.3 V ±5.0%, unless otherwise noted.

# KVCO

### Table 4. Revision history

| Revision | Date   | Description of changes   |  |
|----------|--------|--|--|
| 1.0      | 6/2015 | Initial release  |  |
| 2.0      | 8/2016 | <ul> <li>Added revision history table</li> <li>Modified the target application lists</li> <li>Corrected SPI access to temperature sensor and graph, and parameters</li> <li>Corrected the parameters on assembly conditions</li> </ul> |  |
