### DESCRIPTION:

The FCT2374T is an 8-bit register built using an advanced dual metal CMOS technology. These registers consist of eight D-type flip-flops with a buffered common clock and buffered 3-state output control. When the output enable ( $\overline{OE}$ ) input is low, the eight outputs are enabled. When the  $\overline{OE}$  input is high, the outputs are in the high-impedance state.

Input data meeting the set-up and hold time requirements of the D inputs is transferred to the Q outputs on the low-to-high transition of the clock input.

The FCT2374T has balanced output drive with current limiting resistors. This offers low ground bounce, minimal undershoot and controlled output fall times-reducing the need for external series terminating resistors. FCT2374T parts are plug-in replacements for FCT374T parts.
