Thick Film Chips

	Page	
RMC SERIES - General Purpose Thick Film Chip Resistors	1	
RHC SERIES - High Power Thick Film Chip Resistors	3	
RMCP SERIES - General Purpose High Power Thick Film Chip Resistors	5	NEW
RMCS SERIES - Sulfur Resistant Thick Film Chip Resistors	7	
HMC SERIES - High Value Thick Film Chip Resistors	9	
HVC SERIES - High Voltage Thick Film Chip Resistors	11	
RVC SERIES - Medium Voltage Thick Film Chip Resistors	13	
RPC SERIES - Pulse Withstanding Thick Film Chip Resistors	15	
FCR SERIES - Trimmable Thick Film Chip Resistors	17	
RGC SERIES - Semi-Precision Thick Film Chip Resistors	19	

Thin Film SMD Chips

RNC SERIES - Precision Thin Film Chip Resistors	21	
RNCS SERIES - Anti-Corrosive Tantalum Nitride Replacement	23	
RNCP SERIES - High Power Anti-Sulfur Thin Film Chip Resistors	25	NEW
MLF SERIES - Precision Thin Film MELF Resistors	27	

Chip Arrays & Networks

RAV SERIES - Convex Termination Chip Resistor Array	29
RAC SERIES - Concave Termination Chip Resistor Array	31
HVR SERIES - High Voltage Radial Leaded Plate Resistor	33
HVD SERIES - High Voltage Plate Resistor Divider	35

Current Sensing Resistors

CSR / CSRN SERIES - Thick Film Current Sensing Resistors	37	
CSS / CSSH SERIES - Ultra Precision Current Sensing Chip Resistors	39	NEW
CSNL SERIES - Metal Foil Current Sensing Resistors	41	
HLD SERIES - High Current Shunt / Sensing Resistors	43	
MR / TMR SERIES - Low Resistance Value - Molded 2 & 4 Leads	45	
MPR SERIES - Flameproof Metal Plate Resistors	47	
BR SERIES - Bare Element Current Sense Resistors	49	NEW

Axial Leaded Metal and Carbon Resistors

RN / RNM SERIES - General Purpose Metal Film Resistors	51
RS / RSM SERIES - General Purpose Metal Oxide Resistors	53
ASR / ASRM SERIES - Anti-Surge Resistors	55
SPR / SPRM SERIES - Discharge Path Resistors	57
RSPF / RSPL SERIES - Flameproof Power Resistors	59
FRN SERIES - Fusing Resistors	61
MG / MGM SEIRES - High Voltage Metal Glaze Resistors	63
CF / CFM SERIES - Carbon Film Resistors	65
HDM SERIES - Moisture Resistant Carbon Film Resistors	67
RC SERIES - Carbon Composition Resistors	69
JW SERIES - Tin Plated Jumper Wire	72
CD SERIES - Zero Ohm Resistors	73

NEW

NEW

- Features:
- ✓ Nickel Barrier terminations standard
 - ✓ Power derating from 100% at 70°C to zero at +155°C
 - ✓ Zero ohm available (max resistance 0.05Ω)
 - ✓ RoHS compliant / lead-free available (RMCF)

Electrical Specifications								
Type / Code	Package Type	Power Rating (Watts) @ 70°C	Maximum Working Voltage ①	Maximum Overload Voltage	Maximum Current	Resistance Temperature Coefficient	Ohmic Range and Tolerance	
							1%	5%

Note: Lead free (RMCF) dimensions same as standard parts

Performance Characteristics		
Test	Test Conditions (JIS C 5202)	Test Results
Short Time Overload	2.5x rated voltage for 5 seconds	± (2% + 0.1Ω)
Dielectric Withstanding Voltage	100 VAC, 1 minute	± (1% + 0.05Ω)
Resistance to Soldering Heat	260°C ±5°C, for 10 sec. ±0.5 sec. (Solder Bath)	± (1% + 0.05Ω)
Solderability	235°C ±5°C, for 2 sec. ±0.5 sec. (Colophonium flux)	95% coverage, minimum
Temperature Cycle	-65°C: 30 min. 25°C: 2 to 3 min. 155°C: 30 min. 25°C: 2 to 3 min. (5 Cycles)	±(1% + 0.05Ω) Jumper (<0.05Ω)
Endurance (Damp load)	40°C ± 2°C, 90% RH, Rated Load 90 min. On, 30 min. Off for 1,000 hrs. -0hrs./+48hrs.	±(3% + 0.1Ω) Jumper (<0.05Ω)
Endurance (Rated load)	70°C ± 2°C, Rated Load 90 min. On, 30 min. Off for 1,000 hrs. -0hrs./+48hrs.	±(3% + 0.1Ω) Jumper (<0.05Ω)
Voltage Coefficient	1/10 rated voltage for 3 sec. max. then rated voltage for 3 sec. max.	±100 (ppm/V)
Robustness of Termination	Bend of 3mm for 5 ± 1 sec.	± (1% + 0.05 Ohm)

Operating Temperature Range: -65°C to +125°C (0201 size)
-65°C to +155°C (all others)

- Features:
- ✓ Handles 2W of power
 - ✓ Resistances from 0.1Ω to 1MΩ
 - ✓ RoHS compliant / lead-free
 - ✓ TCR of ± 100 ppm/°C
 - ✓ 1% and 5% tolerances
 - ✓ Runs significantly cooler than standard thick film 2512 chip

Electrical Specifications							
Type / Code	Package Type	Power Rating (Watts) @ 70°C	Maximum Working Voltage	Maximum Overload Voltage	Resistance Temperature Coefficient	Ohmic Range and Tolerance	
						1%	5%
RHC 2512	2512	2.0W	200V	400V	±100 ppm/°C	0.1Ω - 1MΩ	0.1Ω - 1MΩ

① Lesser of \sqrt{PR} or maximum working voltage.

Performance Characteristics	
Test	Typical
Moisture Resistance	±1%
Load Life	±1%
Resistance to Soldering	±1%
Temperature Cycling	±1%
Thermal Shock	±1%
Short Time Overload	±1%
Insulation Resistance	≥1MΩ

Operating Temperature Range: -55°C to +155°C

Power Derating Curve

How to Order

RHC 2512	0.315	0.138	0.118	inches
	8.00	3.50	3.00	mm

Test condition
Voltage(Power): 2.0, 2.25, 2.5, 2.75, 3.0, 3.25 times of rated voltage. (8W, 10.1W, 12.5W, 15.1W, 18W, 21.1W)
Applied time : Each voltage 5sec
As a reference test, the RMC was tested with the same rated voltage and testing substrate.

RMCP Series

General Purpose High Power Thick Film Chip Resistors

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ High Power Rating
 - ✓ Nickel Barrier terminations standard
 - ✓ Power derating from 100% at 70°C to zero at +155°C
 - ✓ Zero ohm available (max resistance 0.05Ω)
 - ✓ RoHS compliant

Performance Characteristics		
Test	Test Conditions (JIS C 5202)	Test Results
Short Time Overload	2.5x rated voltage for 5 seconds	± (2% + 0.1Ω)
Dielectric Withstanding Voltage	100 VAC, 1 minute	± (1% + 0.05Ω)
Resistance to Soldering Heat	260°C ±5°C, for 10 sec. ±0.5 sec. (Solder Bath)	± (1% + 0.05Ω)
Solderability	235°C ±5°C, for 2 sec. ±0.5 sec. (Colophonium flux)	95% coverage, minimum
Temperature Cycle	-65°C: 30 min. 25°C: 2 to 3 min. 155°C: 30 min. 25°C: 2 to 3 min. (5 Cycles)	±(1% + 0.05Ω) Jumper (<0.05Ω)
Endurance (Damp load)	40°C ± 2°C, 90% RH, Rated Load 90 min. On, 30 min. Off for 1,000 hrs. -0hrs./+48hrs.	±(3% + 0.1Ω) Jumper (<0.05Ω)
Endurance (Rated load)	70°C ± 2°C, Rated Load 90 min. On, 30 min. Off for 1,000 hrs. -0hrs./+48hrs.	±(3% + 0.1Ω) Jumper (<0.05Ω)
Voltage Coefficient	1/10 rated voltage for 3 sec. max. then rated voltage for 3 sec. max.	±100 (ppm/V)
Robustness of Termination	Bend of 3mm for 5 ± 1 sec.	± (1% + 0.05 Ohm)

Operating Temperature Range: -65°C to +125°C (0402 size)
-65°C to +155°C (all others)

- Features:
- ✓ Barrier terminations engineered to deter sulfur contamination
 - ✓ Non-standard resistance values available
 - ✓ Operating temp range from -55°C to +155°C
 - ✓ Zero ohm available (max resistance 0.05Ω)
 - ✓ RoHS compliant / lead-free

- Features:
- ✓ R Value extension of RMC product
 - ✓ Highly stable performance over time
 - ✓ Power derating from 100% at 70°C to zero at 125°C
 - ✓ E12 and E24 values
 - ✓ Nickel barrier terminations
 - ✓ RoHS compliant / lead-free

Short Time Overload	5 seconds at maximum overload voltage	± 2%
Voltage Coefficient of Resistance	Per JIS C 5202	± 0.5%/V

Operating Temperature Range: -55°C to +125°C

- Features:**
- ✓ Absolute voltage ratings up to 25,000 volts
 - ✓ Ohmic values to 50G
 - ✓ Available with wire bondable terminations
 - ✓ Tight tolerances to 0.5%
 - ✓ Utilizes fine film resistor deposition technology
 - ✓ Superior pulse handling capabilities
 - ✓ Low TCR to 25 ppm/°C
 - ✓ Low VCR to 1 ppm/volt
 - ✓ Very low noise
 - ✓ Ultra high stability
 - ✓ Custom sizes available
 - ✓ RoHS compliant / lead-free

¹ The continuous maximum voltage applied cannot exceed the maximum power rating and is ohmic value dependent.

² To achieve, the terminals must be properly isolated from each other with appropriate potting material.

³ Contact factory for higher power ratings: 0805: 0.2W 1206:0.33W 2010: 1W 2512: 2W

Note: Other case sizes and tolerances are available.

Operating Temperature Range: -55°C to +150°C

- Features:
- ✓ Voltage ratings 2x or more compared to standard chip resistors
 - ✓ Values up to 51M
 - ✓ Proportionally higher pulse power capability
 - ✓ RoHS compliant / lead-free

Operating Temperature Range: -55°C to +125°C

RPC Series

Pulse Withstanding Thick Film Chip Resistor

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Excellent pulse withstanding performance
 - ✓ Broad resistance range
 - ✓ Higher anti-surge performance compared with RMC Series
 - ✓ Stability class: 5%
 - ✓ RoHS compliant / lead-free

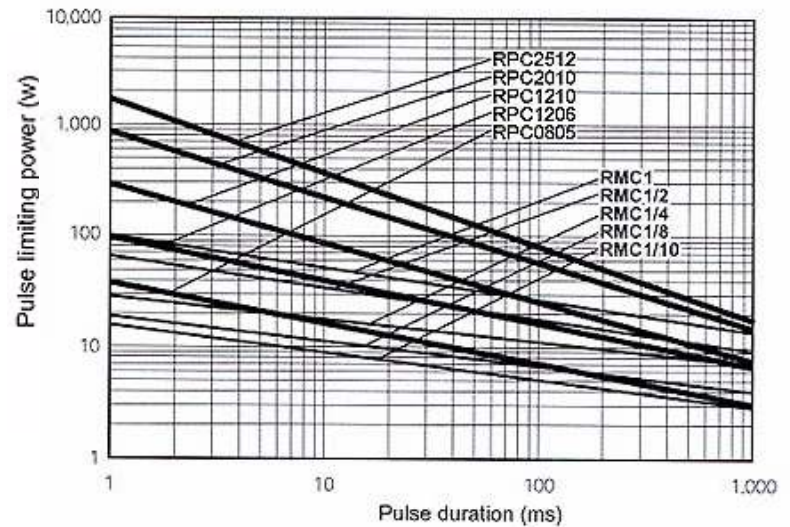

Electrical Specifications				
Type / Code	Power Rating (Watts) @ 70°C	Maximum Working Voltage [Ⓞ]	Resistance Temperature Coefficient	Ohmic Range and Tolerance 5%, 10%, 20%

Operating Temperature Range: -55°C to +125°C

- Features:
- ✓ YAG laser user-trimmable in circuit
 - ✓ Available in a variety of pre-trim tolerance ranges
 - ✓ TCR of $\pm 200 \text{ ppm}/^\circ\text{C}$
 - ✓ RoHS compliant / lead-free

Short Time Overload	±2%

Operating Temperature Range: -55°C to +125°C

- Features:**
- ✓ Precision performance
 - ✓ Tolerances of +0.5% and ±1%
 - ✓ RoHS compliant / lead-free
 - ✓ Less sensitive to ESD discharges than comparable thin film devices
 - ✓ Highly stable performance over time
 - ✓ Power derating from 100% at 70°C to zero at 150°C
 - ✓ Temperature coefficient of resistance of ±50ppm/°C and ±100ppm/°C

- Features:
- ✓ Precision tolerances to $\pm 0.01\%$
 - ✓ TCR down to $\pm 5\text{ppm}/^\circ\text{C}$
 - ✓ RoHS compliant / lead-free available (RNCF)
 - ✓ E96 and E24 values are standard; E192 are built to order with no part marking
 - ✓ Wide R-value range
 - ✓ Consult factory for tighter tolerances
 - ✓ 2010 and 2512 sizes now available

RNCS Series

Anti-Corrosive Tantalum Nitride Replacement

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Special Passivation for moisture sensitive applications
 - ✓ Absolute TCR's to ± 25 ppm/°C
 - ✓ Available in industry standard sizes from 0402 to 2512
 - ✓ E192 value is built to order with no part marking
 - ✓ Resistance range from 10 Ω to 1M Ω
 - ✓ Test proven immunity to humidity and moisture corrosion
 - ✓ Absolute tolerances to 0.1%
 - ✓ Ideal replacement for costly Tantalum Nitride resistors
 - ✓ RoHS compliant / lead-free

The RNCS series employs a special manufacturing process to ensure high precision, ultra stable performance, and long life in the harshest environments. In moisture comparison testing, the RNCS series outperformed Nichrome Chip Resistors and demonstrated the anti-corrosive claims characterized by Tantalum Nitride resistor products.

RNCP Series

High Power Anti-Sulfur Thin Film Chip Resistor

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Higher power ratings than standard thick film chips
 - ✓ Absolute TCRs to $\pm 100\text{ppm}/^\circ\text{C}$
 - ✓ Impervious to Sulfur contamination, no silver present in terminations
 - ✓ Absolute Tolerances to 1%
 - ✓ Completely lead free and RoHS compliant without exemptions – does not use lead containing glass
 - ✓ Comparable in cost to standard thick film chip resistors

Operating Temperature Range: -55°C to +155°C

- Features:
- ✓ Thick film resistor element
 - ✓ Multiple circuit types available
 - ✓ Ideal SMD substitute for leaded networks
 - ✓ RoHS compliant / lead-free available (RAVF)
 - ✓ Auto-placement capability
 - ✓ Square corner construction standard
 - ✓ Zero ohm jumper available
 - ✓ RAV 324D is standard with scalloped corner

Power Derating Curve

- Features:
- ✓ Ohmic values available up to 2,000G
 - ✓ Voltage ratings to 40,000 volts
 - ✓ Ultra-high stability
 - ✓ Tight tolerances to 0.1%
 - ✓ Low TCR to 10ppm/°C
 - ✓ Low VCR to 0.05ppm/volt
 - ✓ Very low noise
 - ✓ Custom solutions available

HVD Series

High Voltage Plate Resistor Divider

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Ohmic values to 2,000G
 - ✓ Voltage ratings to 40,000 volts
 - ✓ Ultra-high stability
 - ✓ Tight tolerances to 0.1%
 - ✓ Very low noise
 - ✓ Low TCR to 10 ppm/°C
 - ✓ Low TCR tracking to 5 ppm/°C
 - ✓ Low VCR to 0.05 ppm/volt
 - ✓ Custom solutions available
 - ✓ RoHS compliant / lead-free

Utilizing fine film resistor deposition technology, SEI now offers a new level of stability and performance in leaded resistor dividers.

Competing product technologies have constraints due to their dependence on certain limiting composite materials. Traditional thick film products have restricted performance characteristics, while thin film offerings are confined within certain ohmic value ranges.

In addition to improving on these limitations, the fine film deposition demonstrates new characteristics, such as a longer high-aspect ratio trace of lower resistivity film.

These fine film resistor dividers provide unique design efficiency, versatility and linearity, through the combination of long line, high aspect ratio and higher conductivity film.

Electrical Specifications			
HVD Case Size	Power (watts) @ 25°C	Maximum Voltage Rating	Tolerance
04	0.5W	4KV	0.1% - 1%
05	1W	5KV	0.1% - 1%
10	1W	10KV	0.25% - 1%
20	2W	20KV	0.25% - 0.5%
30	3W	30KV	0.5% - 5%
40	6W	40KV	0.5% - 5%

Note ①: TCR tracking typically < 25% of the absolute TCR to a minimum of 10ppm/°C

Note ②: Express value as a four digit number, the first three numbers are the significant value and the fourth number is the number of zeros

Design Flexibility:

The HVD series can accommodate virtually any divider ratio due to the long serpentine pattern in the fine film manufacturing, combined with the utilization of low ohms/square thick film inks. Please contact SEI with custom design needs.

Divider Design

Excellent VCR Tracking:

The VCR is virtually flat over a wide range of values.

- Features:
- ✓ 0402 to 2512 & 1225 sizes available
 - ✓ Power ratings to 3W
 - ✓ Low inductance – less than 0.2nH typically
 - ✓ RoHS compliant
 - ✓ Non-standard resistance values available
 - ✓ 2010 and 2512 sizes available with narrow terminations (CSRN)

CSR3 (1225) 4 Terminal Bottom

- Features:
- ✓ High power metal alloy current sense resistor
 - ✓ Very low inductance (0.5nH to 5nH)
 - ✓ High temperature performance: up to 275°C
 - ✓ Excellent frequency response
 - ✓ Low thermal EMF (<1μV/C)
 - ✓ Proprietary processing technique produces extremely low resistance values
 - ✓ RoHS compliant / lead-free

Moisture Resistance	MIL-STD-202F-Method 106G	± 0.5%	≤ 0.5%
Insulation Resistance	MIL-STD-202F-Method 302 Apply 100Vdc for 1 minute	1MΩ minimum	≥ 1MΩ
Leach Resistance	-	90 seconds minimum	≥ 90 seconds

Operating Temperature Range: -65°C to +275°C

- Features:
- ✓ High power current sense resistor
 - ✓ TCR of ± 50 ppm/ $^{\circ}$ C
 - ✓ Resistances down to 0.0005 (1/2 m Ω)
 - ✓ Current handling up to 63 amps
 - ✓ Non-standard resistance values available
 - ✓ RoHS compliant / lead-free

HLD Series

High Current Shunt / Sensing Resistor

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Values from 0.003 to 0.1
 - ✓ Suitable for high current applications where standard current sense resistor will not survive
 - ✓ Current handling up to 100 amps
 - ✓ Handles 1W to 5W of power
 - ✓ Various wire alloys and sizes allow for value, tolerance, and TC flexibility; contact factory for specific combination of alloy and Temperature Coefficient of Resistance.

Electrical Specifications

MR/TMR Series

Low Resistance Value – Molded 2 and 4 Leads

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Metal element resistors
 - ✓ Excellent load life stability
 - ✓ Inherently non-inductive
 - ✓ Tinned copper leads – 10 lbs. pull
 - ✓ Low temperature coefficient
 - ✓ RoHS compliant / lead-free
 - ✓ High power to size ratio
 - ✓ Molded bodies
 - ✓ Two or four terminals
 - ✓ TMR – Kelvin Bridge Test
 - ✓ Cut and formed product is available on selected sizes
- Contact factory for details

Power Derating Curve

TCR vs Resistance

- Features:
- ✓ Small size with high power ratio
 - ✓ Low resistance values and low inductance
 - ✓ Crimped leads keep circuit board temperatures cooler
 - ✓ RoHS compliant / lead-free

BR Series

Bare Element Current Sense Resistors

Stackpole Electronics, Inc.

Resistive Product Solutions

Features:

- ✓ 1, 3 and 5 watts
- ✓ ±1%, ±2% or ±5% tolerance
- ✓ Resistance wire TCR ±20ppm/°C
- ✓ Low inductance versions available for high frequency applications
- ✓ All welded construction
- ✓ Flameproof
- ✓ Non-inductive (10 nH max)
- ✓ Solderable copper leads (60/40)
- ✓ High current handling to 70 amps
- ✓ RoHS compliant / lead-free

Applications:

- ✓ Current sensing
- ✓ Feedback
- ✓ Low inductance
- ✓ Surge and pulse

- Features:
- ✓ Precision metal film
 - ✓ Superior electrical, TCR performances
 - ✓ Flame-retardant coatings are standard
 - ✓ Panasert available (selected sizes: contact factory)
 - ✓ RNM (mini) an ideal choice where size constraints apply
 - ✓ RN 5% replaces MP series
 - ✓ RoHS compliant / lead-free available (RNF/RNMF)
 - ✓ Lower or higher resistance values may be possible (contact factory)

Temperature Cycling	JESD22 Method JA-104	± 1%
Moisture Resistance	MIL-STD 202, Method 106	± 0.5%

Operating Temperature Range: -55°C to +155°C

- Features:
- ✓ Lower-cost alternative to carbon comps and wirewounds
 - ✓ Coating meets UL 94V-0
 - ✓ Meets solvent test of Mil Standard 202, Method 215
 - ✓ Cut and formed product is available on select sizes; contact factory for details
 - ✓ Higher or lower resistance values may be possible; contact factory
 - ✓ RoHS compliant / lead-free available (RSF, RSMF)

Operating Temperature Range: -55°C to +200°C (RS 1/2, RSM 1)
-55°C to +235°C (All others)

- Features:
- ✓ Excellent anti-surge characteristics
 - ✓ Stable characteristics through the resistance range
 - ✓ Good alternative to carbon composition resistors
 - ✓ Applications include power supplies, CRT's, and anti-surge circuits
 - ✓ Cut and formed product is available on select sizes; contact factory for details
 - ✓ RoHS compliant / lead-free

Load Life @ 70°C - 1,000hrs	±5%
Resistance to Soldering Heat	±1%
Short Time Overload	±2%

Operating Temperature Range: -40°C to +155°C

- Features:
- ✓ High voltage capability from 1600 to 4000 volts
 - ✓ Inexpensive high voltage leaded resistor solution
 - ✓ High resistance values up to 200M
 - ✓ Tolerances as low as 1%, TC's as low as 100ppm/°C

- Features:
- ✓ General purpose resistor ideal for commercial/industrial applications
 - ✓ Flame retardant coatings standard
 - ✓ Flameproof version available as CFF
 - ✓ Panasert available on selected sizes; contact factory
 - ✓ Auto sequencing/insertion compatible
 - ✓ CFM (mini) ideal choice when size constraints apply
 - ✓ Cut and formed product is available on select sizes; contact factory
 - ✓ Standard lead wire for CF/CFM is copper plated steel, with 100% tin over plate
 - ✓ 100% tin plate on copper wire is available as type CFQ/CFQM
 - ✓ RoHS compliant / lead-free

Operating Temperature Range: -55°C to +155°C

- Features:**
- ✓ Specialized materials, processes and controls ensure a part that is impervious to moisture
 - ✓ Small size with high power density
 - ✓ Auto sequencing / insertion capable
 - ✓ Low cost replacement in many applications using metal glaze resistors
 - ✓ RoHS compliant / lead-free

Technical Guide:

1. Storage Conditions:
 - Temperature: 5 to 35°C (40 to 95°F)
 - Humidity: 25 – 60% relative humidity
 - Term: 2 years in factory poly-bag package (with desiccant)
 - Environment: clean, dry environment, free of corrosive gases
2. Application precautions:
 - Lead forming: forming is recommended at least 2mm of farther from the base of the lead
 - Soldering: soldering is recommended at least 4mm or farther from the base of the lead
3. Washing:

Carbon composition resistors are highly hygroscopic and changes in resistance value can occur if too much moisture is absorbed. For this reason it is recommended not to use water or water-soluble solvents to clean these components. Alcohol or hydrocarbon solvents are recommended for rinsing.

4. Soldering Recommendations:
 - Note: The conditions shown below are for reference. Please perform a mounting evaluation to assure compatibility.
 - a. Flow soldering (recommended profile for Sn and Sn/Pb solders)

- b. Soldering iron (recommended for Sn and Sn/Pb solders)
 - Temperature of soldering tip: 300°C, duration: 10 sec. max.
 - Temperature of soldering tip: 350°C, duration: 3 sec. max.

Other:

1. Evaluate and confirm the compatibility of your assembly process with this product.
2. Refer to the catalog, the product news, and the specifications for details on the RC series resistors.
3. If you have any questions, please contact our sales staff.

- Features:
- ✓ Ideal for crossovers or jumpers on circuit boards
 - ✓ High current ratings
 - ✓ Standard JW is copper plated steel, with 100% tin overplate
 - ✓ 100% tin plate on copper wire is available as type JWQ
 - ✓ RoHS compliant / lead free

Operating Temperature Range: -55°C to +275°C

- Features:**
- ✓ WWS offers miniature size at higher power rating
 - ✓ High performance for low cost
 - ✓ High power to size ratio
 - ✓ MWW – Completely molded construction with welded terminations tested to MIL-R-39007
 - ✓ Complete welded terminations
 - ✓ Tinned copper leads
 - ✓ Available in non-inductive styles
 - ✓ High temperature silicone coating
 - ✓ RoHS compliant / lead-free

CB Series

Ceramic Housed Wirewound with Axial Leads

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Fireproof power wirewound
 - ✓ High thermal conductivity
 - ✓ Different element(resistor) available: precision / ceramic & metal oxide
 - ✓ Non-inductive styles available
 - ✓ Body standoffs available; add "F" after CB
 - ✓ RoHS compliant / lead-free

LCB Series

Ceramic Housed for Current Sensing – 2 Leads

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Fireproof construction
 - ✓ Low temperature coefficient
 - ✓ Low resistance value ceramic encased resistor
 - ✓ All welded termination
 - ✓ RoHS compliant / lead-free

See CB datasheet for performance and environmental specifications

TCB Series

Ceramic Housed for Current Sensing – 4 Leads

Stackpole Electronics, Inc.

Resistive Product Solutions

- Features:
- ✓ Four terminal construction
 - ✓ Low inductance
 - ✓ Low temperature coefficient
 - ✓ RoHS compliant / lead-free
 - ✓ Fireproof construction
 - ✓ All welded termination
 - ✓ Low resistance value ceramic encased resistor
- See CB data sheet for performance and environmental specifications

Lead Diameter .036 Length 1" minimum

- Features:**
- ✓ Flameproof inorganic construction
 - ✓ High temperature potting compound
 - ✓ VM – Wirewound on fiberglass element
 - ✓ MVM – Metal oxide element for higher values
 - ✓ LVM – Low resistance wire or ribbon element
 - ✓ WVM – Precision wirewound element
 - ✓ RoHS compliant / lead-free
 - ✓ See CB Series for Performance Characteristics

- Features:
- ✓ Aluminum housing for maximum heat dissipation
 - ✓ Complete welded construction
 - ✓ 5 - 50W tinned copper terminals
 - ✓ Centerless ground steatite or alumina cores
 - ✓ Molded epoxy body for heat transfer
 - ✓ Non-inductive winding available
 - ✓ 100 - 250W threaded terminals
 - ✓ RoHS compliant / lead-free

KAL 5 - 50

KAL 100

KAL 250

- Features:**
- ✓ High current capability
 - ✓ RoHS compliant / lead-free
 - ✓ Non-inductive style only available with silicone coating (NSWT)
 - ✓ Suitable for soldering or thru bolt connections
 - ✓ Wirewound ribbon on ceramic substrate
 - ✓ SWT – Silicone coating provides temperature handling up to 350°C
 - ✓ EWT – Vitreous enamel coating provides temperature handling up to 500°C

Ⓞ EWT and NSWT series will have the same Mechanical Specifications as SWT series

Power Derating Curve:

The SHP series of resistors is a thick film on steel technology uniquely suited for wide-scale usage in resistor and heating applications where high power density, surge handling, and low inductance are required in a defined space.

The SHP series differentiates itself from other thick film on metal products through the manner in which the resistive film is deposited. Other manufacturers utilize crude screen-printing processes, while the SHP series employs a precision fine film dispensing system, capable of writing quality resistive traces on a non-corrosive stainless steel substrate.

- Features:**
- ✓ Superior thermal transfer
 - ✓ Superior shock and vibration strength
 - ✓ Integrated fusing for failsafe circuit protection
 - ✓ Design provides low inductance
 - ✓ RoHS compliant / lead-free
 - ✓ Reduced size compared to power wirewounds
 - ✓ Flameproof package
 - ✓ Current and temperature sense options available
 - ✓ Custom mounting and lead attachment

Electrical Specifications						
Category	SHP 1/2	SHP 1	SHP 2	SHP 3	SHP 5	SHP 7
Maximum Pulse Power ①④	0.5KW	1.5KW	2KW	3.5KW	5KW	7KW
Maximum Continuous Load without Cooling ②	160W	180W	200W	260W	270W	280W③
Maximum Continuous Load with Cooling ①	300W	700W	780W	900W	1,000W	1,490W③
Resistance Values	22Ω, 47Ω, 100Ω	12Ω, 22Ω, 47Ω, 100Ω, 150Ω				47Ω, 100Ω, 150Ω
Minimum Dielectric Withstanding Voltage	2,500V DC					
Maximum Resistor "hotspot" Temperature	365°C					
Stability (nominal load) after 50K cycles	ΔR < ±5%					
Inductance (Typical)	<3μH	<3μH	<3μH	<4μH	<5μH	<6μH

① Testing carried out on a heatsink (thermal resistance 0.53°C/W), force cooled at 5m/s air velocity for 50K cycles.

② Testing carried out on a heatsink (thermal resistance 0.53°C/W), with no air-cooling, Rt = 25°C.

③ Limited by the solder type, the maximum continuous load can be improved with HMP solder.

④ Maximum Pulse Power is determined using a duty cycle of 1:5

Application Notes

It is important to select a heatsink with low thermal resistance (typically ≤0.53°C/W) to enable the component to operate at its continuous power rating. Data for heatsinks with higher thermal resistance can be found in additional performance specification. The SHP resistor series will “failsafe” (open circuit) under overload (fault) conditions while maintaining a dielectric withstanding voltage of 1KV min.

- Appropriately apply thermal grease between the heatsink and the resistor
- The resistor should be mounted using the appropriate screw and torquing to a maximum of 2.5±10%Nm.
 - * M5 screw head bolt for SHP 2, 3, 5 & 7;
 - * M3 screw head bolt for SHP 1;
 - * M2 screw head bolt for SHP 1/2.
- The mounting area of the heatsink must have a surface finish of ≤6.3m with a flatness of ≤0.05mm.
- Forced air cooling is required.

Termination Style

SHP Series are available with solder coated conductors (I), flying leads (L), or push-on connections (T):

Style I, standard solder coated conductors;

Style L, flying leads, a 250mm long cable, rated up to 40A, are attached to the resistor. Cables conform to UL3134.

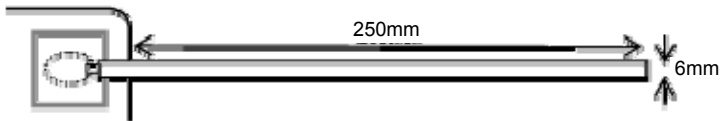

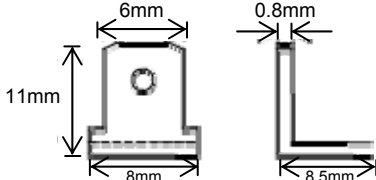

Style T, standard push on connections.

Terminations

The following Termination options are available:

Option	Code	Nominal Dimensions
Solder pad only SnAg (96S)	I	
Flying leads UL3134 40A, 600V	L	
Push-on connectors (SHP 1,2,3,5 & 7)	T	

Performance Data

	Maximum
Pulsed load at full pulse power rating 50,000 cycles (see Fig. 1)	
Mounted on a 0.53°C/W heatsink with 5m/s forced air cooling, air temperature 25°C	ΔR% 5
Derating at heatsink temperatures > 160°C	See Fig. 2

Application Notes

A heatsink with thermal resistance $\leq 0.53^\circ\text{C/W}$ will enable the component to operate at its continuous power rating. Thermal grease (e.g. Dow Corning DC340) should be used and the heatsink should have a surface finish of $<6.3\mu\text{m}$ with flatness of $<0.05\text{mm}$. The resistor should be mounted using a screw head bolt of size M5 for SHP 2, 3, 5 & 7, M3 for SHP1 and M2 for SHP1/2. This should be torqued to $2.5\text{Nm} \pm 10\%$.

SHP resistors will fail safe (open circuit) under overload fault conditions and still maintain a 1KV dielectric withstand.

Overload conditions

The HPC series represents a breakthrough in functional design, thermal management and end-user benefits. Borrowing from long-proven techniques used in power semiconductors, the HPC series provides up to eight times more useful power than SMD power resistors currently available.

The HPC series, through superior characterization, is intended to remove the mystery of managing board level power by combining established techniques in new ways. The result is superior technology in design options, in a cost effective package.

- Features:**
- ✓ Up to 12W with no external heat sinks
 - ✓ Compatible with conventional pick and place
 - ✓ Only 0.5 x 0.5 PCB footprint
 - ✓ Non-inductive resistive element
 - ✓ Anodized heat sink top provides 800V voltage withstanding
 - ✓ Up to 50W for short duration
 - ✓ Stackpole patent no. US 7,286,358 B2
 - ✓ Available in 1% and 5% tolerance
 - ✓ RoHS compliant / lead-free

Mounting Note: When mounting ensure entire ceramic portion of case is mounted on a clean, flat heat sink with an appropriate thermal interface, such as thermal grease. For screw mounting use of a compression washer at a force of 150 to 300lbs (665 to 1330N) is recommended without exceeding mounting torque of 8 in-lbs (0.9 N-m) to avoid package damage. For clip mounting use of a round or smooth clip in contact area is recommended to avoid a concentrated hot spot on package.

Electrical Thermal Characteristics					
	TR20	TR30	TR35	TR50	TR100
Free Air Power Rating	3W in free air at 25°C	2.25W in free air at 25°C	2.5W in free air at 25°C	3W in free air at 25°C	3.5W in free air at 25°C
The case temperature is to be used for the definition of the applied power limit					
The case temperature measurement must be made with a thermocouple contacting the center of the component mounted on the designed heat sink					
TR50/100 must be mounted to heat sink using proper mounting clip for efficient heat dissipation					

This one definitely tops the FAQ list. Chip resistors and axial leaded resistors all seem to have various different wattage ratings depending on the manufacturer and even within the same manufacturer. This is completely illogical because intuition of the physics involved says that parts that are the same size, and are made of similar materials, will be able to handle the same power in a given application. So, why all the confusion?

Chip Resistors

First in the surface mount world, let's choose the 1206 size chip resistor as our example. For many years (and still today, for EIA power ratings), this size resistor was considered an 1/8 watt part. These ratings were based on older design rules, and on a mindset influenced by the military. The military has traditionally been conservative in how they rate electrical components and this case is no different. A 1206 used in an application where it will only need to handle 1/8 watt, will typically shift around 0.2% from its original value over the life of the part, per 1000 hours.

More recently, the CECC (a committee similar to EIA in Europe) has chosen to rate the 1206 size resistor at 1/4 watt. Similarly the 0603 size rating was increased to 1/10 from 1/16, the 0805 increased to 1/8 from 1/10, and so on. These ratings were based on the fact that certain guidelines have been established in the circuit board industry, so that the worst-case scenario is now not nearly so bad. The same 1206 from our previous example, but now used in a 1/4 watt application, will experience a typical shift of around 0.25% per 1000 hours. This is clearly not much greater than the shift at the lower 1/8 watt power level, so the resistor industry has, for the most part, adopted the higher power rating as the standard.

What is confusing is that there are many designs that have originated some years ago and thus still use the lower power rating. This should not pose a problem, since a higher power rating than required is almost always acceptable. The key to surface mount resistors and their substitutions is to compare size vs. size as long as the rated power of the part utilized is greater than or equal to that required in the application. After all, it is the physical size of the part that determines whether it will retrofit into a particular board, not the power rating.

Axial Leaded Resistors

A similar argument can be made for axial leaded resistors. If physics says that parts of the same size, and relatively the same material should handle the same amount of power, then why are there 1/4 watt and 1/2 watt parts with the same dimensions?

Our surface mount discussion still holds true here. An 1/8 watt part can usually handle more power, but it is at the expense of higher ambient and board temperatures, and a more extreme resistance shift over the life of the part. Again, the rule of thumb should be to try to match parts of the same dimension rather than of the same wattage.

If the application can withstand a little more heat generated and a little more resistance shift over the life of the product, then there should not be any issues with using the parts at their higher power rating.

* Reference value only. The "A" dimension shall be governed by the overall length of the taped component.

The distance between flanges shall be 0.059 inches (1.5 mm) to 0.315 (8 mm) greater than the overall component.

** Class II capable.

*** The given dimension "D" expresses the standard width spacing. A 26mm narrow spacing is available as option "N" packaging code.

1% Marking
The nominal resistance is marked on the surface of the overcoating with the use of 4 digit markings.
0201 and 0402 are not marked.

5% Marking
The nominal resistance is marked on the surface of the overcoating with the use of 3 digit markings.
0201 and 04402 are not marked.

For shared E24/E96 values, 1% tolerance product may be marked with three digit marking instead of the standard four digit marking for all other E96 values. All E24 values available in 1% tolerance are also marked with three digit marking.

Marking Instructions for 0603 1% Chip Resistors (per EIA-J)

A two-digit number is assigned to each standard R-Value (E96) as shown in the chart below. This is followed by one alpha character which is used as a multiplier. Each letter from "Y" - "F" represents a specific multiplier as follows:

Y = 0.1	B = 100	E = 100,000
X = 1	C = 1,000	F = 1,000,000
A = 10	D = 10,000	

EXAMPLE:

Chip Marking	Explanation	Value
01B	01 means 10.0 and B = 100	10.0 x 100 = 1 K ohm
25C	25 means 17.8 and C = 1,000	17.8 x 1,000 = 17.8 K ohm
93D	93 means 90.9 and D = 10,000	90.9 x 10,000 = 909 K ohm

Color Band Description		
Band	Precision	General Purpose
	Have three significant-figure bands, a multiplier band and a tolerance band. Tolerances 1% or less.	Have two significant-figure bands, a multiplier band and a tolerance band. Tolerances 2% or greater.
1st Band	Nominal	Nominal
2nd Band	Nominal	Nominal
3rd Band	Nominal	Multiplier
4th Band	Multiplier	Tolerance
5th Band	Tolerance	

Resistor Glossary	
Term	Definition
Ambient temperature	The ambient temperature is the temperature in the immediate environment of the resistor.
Carbon-composition	Resistor with the resistance element formed by molding a body of carbon powder mixed with a phenolic binder.
Carbon-film	Resistor whose resistance element is carbon film deposited on a ceramic core.
Climate category	Indicates the lowest and the highest ambient temperature at which the resistors may be operated continuously.
Color-band or color code	Method of indicating value and tolerance on axial leaded resistors whose body is too small for legible alphanumerical marking.
Critical resistance	The critical resistance (R_{crit}) is the resistance that can be calculated from the rated dissipation P_v occurring under operating voltage V_{max} . A resistor of critical resistance will exhibit the largest drift in a style, because it is the highest value that may carry the full rated power load.
Current noise	Random low frequency electrostatic noise arising from current fluctuations in parallel with the resistor.
Current sensor	A resistive device employed to sense levels of changes in current.
Derating	The power load capability of a resistor is limited by its permissible element temperature. Since the rated power dissipation is referenced to a specific ambient temperature, higher ambient temperatures require a reduced permissible load, i.e., a derating. The derating curve indicates the permissible power load as a function of the ambient temperature.
Dielectric strength (dielectric withstanding voltage)	The ultimate breakdown voltage of the dielectric or insulation of the resistor when the voltage is applied between the case and all terminals tied together. Dielectric strength is usually specified at sea level and simulated at high altitude air pressures.
DIP	Dual-in-line package resistor network.
E-series	Method of deriving nominal resistance values required for each tolerance level. The series E24 is comprised of 24 values per decade and applies to 2% and 5% tolerances. The series E96 applies to 1% tolerance and E192 applies to 0.1%, 0.25% and 0.5%.
Failure rate	The failure rate indicates the statistically established maximum rate of failures at a level of confidence of 60%. The figures are derived from certified results of standard endurance tests after 1000 hours duration at the rated dissipation.
Film temperature	The temperature of the resistive film is considered in discussions about power rating and pulse load capability. The film temperature determines the drift and stability of the resistor. For resistors that feature hot spots in the resistive film, the higher temperature of the hot spot is to be considered. Since most resistors are covered with lacquer or protective coating, only the surface temperature can be measured on the outside. However, the surface temperature is almost as high as the film temperature.
Fixed resistors	Resistors whose value is set in the manufacturing process.
Insulation resistance	The DC resistance measured between all terminals connected together and the case, exterior insulation, or external hardware.
Kelvin connection	Four-terminal connection required in low-resistance measurements to eliminate the effects of contact resistance and lead resistance, as well as the effects of lead temperature, providing accurate measurements. Invented by Lord Kelvin in the 19th Century.

Resistor Glossary	
Term	Definition
Maximum working voltage	The maximum voltage stress (DC or rms) that may be applied to the resistor (resistance element). A function of the materials used, the required performance, and the physical dimensions.
Metal oxide	Resistor whose resistance element is a thick film ruthenium oxide paste deposited on a cylindrical ceramic core by means of dipping or spiral-coating.
Operating voltage	The limiting element voltage V_{max} is the maximum voltage that may be applied continuously to the resistor, provided its resistance value is equal to or higher than the critical resistance. The limit applies to DC voltages and to AC rms voltage of undistorted sinusoidal shape.
Power rating	Maximum power in still air that will limit the resistor internal hot-spot temperature to a satisfactory level. Power ratings must be reduced as the temperature rises, so derating curves or charts are published. These parameters are application-dependent.
Pulse load capability	The pulse load capability of a resistor is its ability to withstand transient loads that considerably exceed the rated dissipation with its peak value.
Resistance temperature characteristic (coefficient)	The magnitude of change in resistance due to temperature, expressed in percent or degree centigrade or parts-per-million per degree centigrade (PPM/C). If the resistance changes are linear over the specified temperature range, the parameter is known as the temperature "coefficient". This assumption of linearity is usually made in order to ease calculations.
Resistance tolerance	The permissible deviation of the manufactured resistance value (express in percent) from the specified nominal resistance value at standard or stated environmental conditions.
Resistor	A device that converts electrical energy to thermal energy according to Ohm's Law.
Shunt	A resistive device employed to divert most of the current in an electric circuit.
SIP	Single-in-line package resistor network.
SMD	Surface mount devices. Chips and chip arrays are examples.
Solderability	Property of the termination to accept new solder in a soldering process.
Stability	Ability of a resistor to maintain its initial resistance value of extended periods of time when subjected to any combination of electrical stresses and environmental conditions.
Temperature rise	Thermal resistance that impedes the dissipation of heat from the resistor.
Thick-film	Resistor whose resistance element consists of a ruthenium oxide (also called cermet) screen printed onto a ceramic substrate and fired at a high temperature.
Variable resistors	Resistors whose value can be adjusted (trimmed) by the user, typically by means of a dial.
Voltage coefficient	A resistor has a voltage coefficient if measurements of resistance with different voltages yield different results. The voltage coefficient is the quotient of the relative difference in resistance and the difference of measuring voltage.
Wirewound	Resistor whose resistance element consists of a wire (nickel-chromium, copper-nickel, or gold-platinum) wound around a bobbin or core.
Zero-ohm resistors	Jumpers that are manufactured into resistor bodies for ease of insertion by the user.
