

## Description

The DIODES™ PAM2863 is a continuous mode inductive step-down converter, designed for driving single or multiple series connected LEDs efficiently from a voltage source higher than the LED voltage. The device operates from an input supply between 4.5V and 40V and provides an externally adjustable output current of up to 2A. Depending upon supply voltage and external components, this can provide up to 30 watts of output power.

The PAM2863 includes the output switch and a high-side output current sensing circuit, which uses an external resistor to set the nominal average output current.

Output current can be adjusted below the set value, by applying an external control signal to the VSET pin.

The VSET pin will accept either a DC voltage or a PWM waveform.

The soft-start time can be increased using an external capacitor from the VSET pin to ground. Applying a voltage of 0.2V or lower to the VSET pin turns the output off and switches the device into a low current standby state.

## Features

- Simple Low Parts Count
- Internal 40V NDMOS Switch
- 2A Output Current
- Single Pin On/Off and Brightness Control Using DC Voltage or PWM
- Soft-Start
- High Efficiency (Up to 97%)
- Wide Input Voltage Range: 4.5V to 40V
- Output Shutdown
- Open LED Protection
- Short LED Protection
- Up to 1MHz Switching Frequency
- Typical 5% Output Current Accuracy
- Pb-Free SO-8EP Package
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**
- **For automotive applications requiring specific change control (i.e. parts qualified to AEC-Q100/101/104/200, PPAP capable, and manufactured in IATF 16949 certified facilities), please [contact us](https://www.diodes.com/quality/product-definitions/) or your local Diodes representative.**

<https://www.diodes.com/quality/product-definitions/>

- Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS), 2011/65/EU (RoHS 2) & 2015/863/EU (RoHS 3) compliant.
  2. See <https://www.diodes.com/quality/lead-free/> for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
  3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

## Pin Assignments

## Applications

- High end LED flashlights
- LED light bars

## Typical Applications Circuit

## Pin Descriptions

Pin Number	Pin Name	Function
5, 6	LX	Drain of NDMOS switch.
3, 7, 8	GND	Ground (0V)
4	VSET	<ul style="list-style-type: none"> <li>Multi-function On/Off and brightness control pin:</li> <li>Leave floating for normal operation.</li> <li>Drive to voltage below 0.2V to turn off output current</li> <li>Drive with DC voltage (<math>0.3V &lt; VSET &lt; 2.5V</math>) to adjust output current from 12% to 100% of <math>I_{OUTnom}</math></li> <li>Drive with PWM signal from open-collector or open-drain transistor, to adjust output current. Adjustment range 1% to 100% of <math>I_{OUTnom}</math> for <math>f &lt; 500Hz</math></li> <li>Connect a capacitor from this pin to ground to increase soft-start time. (Default soft-start time = 0.1ms. Additional soft-start time is approx. 1.5ms/1nF)</li> </ul>
2	ISENSE	Connect resistor $R_S$ from this pin to VIN to define nominal average output current $I_{OUTnom} = 0.1/R_S$
1	VIN	Input voltage (6V to 40V). Decouple to ground with 10µF or higher X7R ceramic capacitor close to device.

**Functional Block Diagram**

**Absolute Maximum Ratings** (@T<sub>A</sub> = +25°C, unless otherwise specified.)

These are stress ratings only and functional operation is not implied. Exposure to absolute maximum ratings for prolonged time periods can affect device reliability. All voltages are with respect to ground.

Parameter	Rating	Unit
Input Voltage Range	-0.3 to +40	V
LX, ISENSE Pin Voltage	-0.3 to +40	
VSET Pin Voltage	-0.3 to +6.0	
Maximum Junction Temperature	170	°C
Storage Temperature	-65 to +170	
Soldering Temperature	300, 5sec	

**Recommended Operating Conditions** (@T<sub>A</sub> = +25°C, unless otherwise specified.)

Parameter	Rating	Unit
Input Voltage Range	4.5 to 40	V
Ambient Temperature Range	-40 to +85	°C
Junction Temperature Range	-40 to +125	°C

## Thermal Information

Parameter	Package	Symbol	Max	Unit
Thermal Resistance (Junction to Ambient)	SO-8EP	$\theta_{JA}$	90	°C/W
Thermal Resistance (Junction to Case)	SO-8EP	$\theta_{JC}$	11	

## Electrical Characteristics (@ $T_A = +25^\circ\text{C}$ , $V_{IN} = 16\text{V}$ , unless otherwise specified.)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Inout Voltage	$V_{IN}$	—	4.5	—	40	V
Output Current	$I_{LED}$	$R_S = 0.1\Omega$	—	1	—	A
		$R_S = 0.05\Omega$	—	2	—	A
Shutdown Current	$I_{SD}$	VSET Pin Grounded	—	20	40	$\mu\text{A}$
Quiescent Current without Switching	$I_Q$	VSET Pin Floating, $V_{IN} = 16\text{V}$	—	0.6	—	$\text{mA}$
Mean Current Sense Threshold Voltage	$V_{SENSE}$	Measured on $I_{SENSE}$ Pin with Respect to $V_{IN}$	95	100	105	mV
Sense Threshold Hysteresis	$V_{SENSE\_HYS}$	—	—	$\pm 13$	—	%
$I_{SENSE}$ Pin Input Current	$I_{SENSE}$	$V_{SENSE} = V_{IN} - 0.1$	—	8	—	$\mu\text{A}$
VSET Range on VSET Pin	$V_{EN}$	For DC Dimming	0.3	—	2.5	V
DC Voltage on VSET Pin to Enable	$V_{EN(ON)}$	$V_{EN}$ Rising	—	0.25	—	V
DC Voltage on VSET Pin to Disable	$V_{EN(OFF)}$	$V_{EN}$ Falling	—	0.2	—	V
LX Switch on Resistance	$R_{LX}$	@ $I_{LX} = 100\text{mA}$	—	0.3	—	$\Omega$
LX Switch Leakage Current	$I_{LX(LEAK)}$	—	—	—	5	$\mu\text{A}$
Soft-Start Time	$T_{SS}$	$V_{IN} = 16\text{V}$ , $C_{EN} = 1\text{nF}$	—	1.5	—	ms
Operating Frequency	$F_{LX}$	$V_{IN} = 16\text{V}$ , $V_O = 9.6\text{V}$ (3 LEDs), $L = 47\mu\text{H}$ , $\Delta I = 0.25\text{A}$ ( $I_{LED} = 1\text{A}$ )	—	233	—	kHz
Recommended Minimum Switch ON Time	$T_{ON\_REC}$	For 4% Accuracy	—	500	—	ns
Recommended Maximum Switch Frequency	$F_{LX(MAX)}$	—	—	—	1.0	MHz
Max Duty Circle	—	—	—	98	—	%
Recommended Duty Cycle Range	$DLX$	—	25	—	75	%
Internal Comparator Propagation Delay	$T_{PD}$ (Note 4)	—	—	45	—	ns
Over Temperature Protection	$T_{OTP}$	—	—	150	—	°C
Temp Protection Hysteresis	$T_{OTP\_HYS}$	—	—	40	—	°C
Current Limit	$I_{XL(MAX)}$	Peak Inductor Current	—	2.5	—	A

Note: 4. Parameters are not tested at production, but guaranteed by design.

**Typical Performance Characteristics** (@ $T_A = +25^\circ\text{C}$ ,  $V_{IN} = 16\text{V}$ , unless otherwise specified.)

**Typical Performance Characteristics** (continued) (@T<sub>A</sub> = +25°C, V<sub>IN</sub> = 16V, unless otherwise specified.)

7. Quiescent Current VS. Input Voltage

8. Shutdown Current VS. Input Voltage

9. Feedback Voltage VS Vin

10. Duty Cycle VS LED Current (PWM=200Hz)

11. I<sub>LED</sub> VS V<sub>SET</sub> (V<sub>IN</sub>=16V, 3 LEDs, 47µH, R<sub>S</sub>=0.15Ω)

12. I<sub>LED</sub> VS V<sub>SET</sub> (V<sub>IN</sub>=16V, 3 LEDs, 100µH, R<sub>S</sub>=0.3Ω)

**Typical Performance Characteristics** (continued) (@T<sub>A</sub> = +25°C, V<sub>IN</sub> = 16V, unless otherwise specified.)

## Application Information

### Setting Nominal Average Output Current with External Resistor $R_S$

The nominal average output current in the LED(s) is determined by the value of the external current sense resistor ( $R_S$ ) connected between  $V_{IN}$  and  $I_{SENSE}$  and is given by:

$$I_{OUT(NOM)} = \frac{0.1}{R_S}$$

The table below gives values of nominal average output current for several preferred values of current setting resistor ( $R_S$ ) in the typical application circuit shown on page 1.

$R_S$ ( $\Omega$ )	Nominal Average Output Current (mA)
0.05	2000
0.067	1500
0.1	1000
0.13	760
0.15	667
0.3	333

The above values assume that the VSET pin is floating and at a nominal voltage of  $V_{REF}$  (2.5V). Note that  $R_S = 0.1\Omega$  is the minimum allowed value of sense resistor under these conditions to maintain switch current below the specified maximum value. It is possible to use different values of  $R_S$  if the VSET pin is driven from an external voltage.

### Capacitor Selection

A low ESR capacitor should be used for input decoupling, as the ESR of this capacitor appears in series with the supply source impedance and lowers overall efficiency. This capacitor has to supply the relatively high peak current to the coil and smooth the current ripple on the input supply. A minimum value of  $10\mu F$  is acceptable if the input source is close to the device, but higher values will improve performance at lower input voltages, especially when the source impedance is high. The input capacitor should be placed as close as possible to the IC.

For maximum stability over temperature and voltage, capacitors with X7R, X5R, or better dielectric are recommended. Capacitors with Y5V dielectric are not suitable for decoupling in this application and should NOT be used.

### Inductor Selection

Recommended inductor values for the PAM2863 are in the range  $33\mu H$  to  $100\mu H$ . Higher values of inductance are recommended at higher supply voltages in order to minimize errors due to switching delays, which in increased ripple and lower efficiency. Higher values of inductance also result in a smaller change in output current over the supply voltage range. The inductor should be mounted as close to the device as possible with low resistance connections to the LX and  $V_{IN}$  pins. The chosen coil should have a saturation current higher than the peak output current and a continuous current rating above the required mean output current.

The inductor value should be chosen to maintain operating duty cycle and switch 'on'/off times within the specified limits over the supply voltage and load current range. The following equations can be used as a guide.

LX Switch 'On' time

$$T_{ON} = \frac{L\Delta I}{V_{IN} - V_{LED} - I_{LED}(R_S + R_L + R_{LX})}$$

Lx Switch 'Off' time

$$T_{OFF} = \frac{L\Delta I}{V_{LED} + V_D + I_{LED}(R_S + R_L)}$$

Where: L is the coil inductance;  $R_L$  is the coil resistance;  $R_S$  is the current sense resistance;  $I_{LED}$  is the required LED current;  $\Delta I$  is the coil peak-peak ripple current (Internally set to  $0.25 \times I_{LED}$ );  $V_{IN}$  is the supply voltage;  $V_{LED}$  is the total LED forward voltage;  $R_{LX}$  is the switch resistance ( $0.3\Omega$  nominal);  $V_D$  is the diode forward voltage at the required load current.
