

Violet Micro Potentiometer Knob – 4 pack

Product ID: 5537

Description

Have you found yourself in a maze of twisty-turny knobs, all alike? These micro potentiometer (or rotary encoder) knobs offer a rainbow burst of color to your synth or control panel. They are made of a hard plastic, with a grippy star shape. The shape is sometimes referred to as "Davies 1900" style, but they may not be a perfect size/color match for original Davies knobs.

The micro knobs work with any shaft type (round, D-shaft, or T18) because they come with a tiny lil set screw. Use a 2mm hex wrench, not included, to carefully tighten once placed.

This is the violet version, comes in a pack of four! We have many other colors available as well.

Technical Details

Dimensions:

- Diameter of top: 12mm / 0.4"
- Diameter of base: 12.7mm / 0.6"
- Height: 15.8mm
- Weight: 1.2g
