Characteristic Curves

The following figures provide typical characteristics for the 10A Hornet at 25°C.

Figure 1. Output Ripple Voltage (20MHz BW) for various output voltages and external caps @12Vin. Additional Decoupling cap of 0.1uF used on input and output side

Figure 2. Typical Start-up using Input Voltage (Vin=12V, Vout = Vout, max, Iout = Iout, max)

Trim

Without an external resistor between Trim and GND pins, the output of the module will be 0.6Vdc. R_{trim} for a desired output voltage, should be as per the following table. The formula in the last column helps determine R_{trim} for other voltages.

V _o (V)	0.59	1.0	1.2	1.5	1.8	2.5	3.3	5.0	$R_{trim} = \left[\frac{1.182}{(V_o - 0.591)} \right] k\Omega$
R _{trim} (kΩ)	Open	2.89	1.941	1.3	0.978	0.619	0.436	0.268	

Safety Considerations

For safety agency approval, the power module must be installed in compliance with the spacing and separation requirements of the end-use safety agency standards listed on the first page of this document. For the converter output to be considered meeting the requirements of safety extra-low voltage (SELV) or ES1, the input must meet SELV/ES1 requirements. The power module has extra-low voltage (ELV) outputs when all inputs are ELV. A 15A quick acting input fuse for the module is required.

Recommended Pad Layout

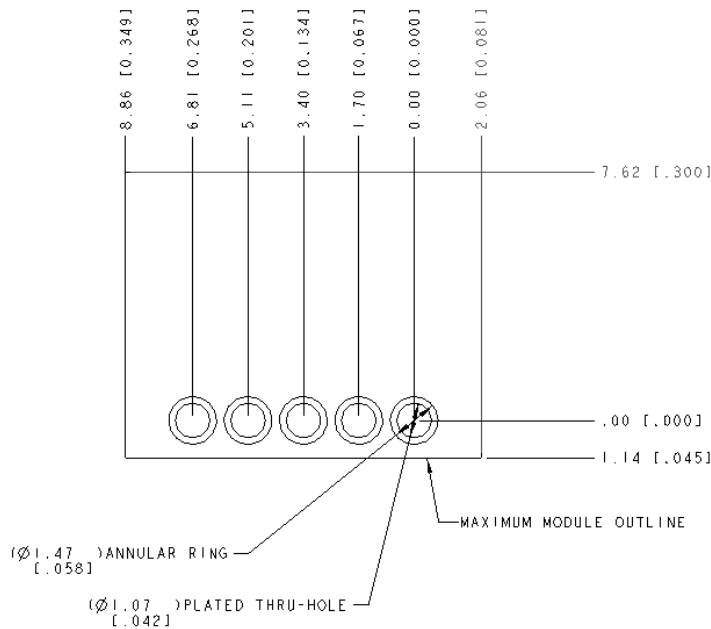

Dimensions are in millimeters and (inches).

Tolerances: x.x mm ± 0.5 mm (x.xx in. ± 0.02 in.) [unless otherwise indicated] x.xx mm ± 0.25 mm (x.xxx in ± 0.010 in.)

$L = 3.29 [0.13] \pm 0.25 [0.112 \pm 0.01]$

Through-Hole Lead-Free Soldering Information

These RoHS-compliant through-hole products use the SAC (Sn/Ag/Cu) Pb-free solder and RoHS-compliant components. They are designed to be processed through single or dual wave soldering machines. The pins have an RoHS-compliant finish that is compatible with both Pb and Pb-free wave soldering processes. A maximum preheat rate of 3°C/s is suggested. The wave preheat process should be such that the temperature of the power module board is kept below 210°C. For Pb solder, the recommended pot temperature is 260°C, while the Pb-free solder pot is 270°C max. Not all RoHS-compliant through-hole products can be processed with paste-through-hole Pb or Pb-free reflow process.
